PREFACE TO THE NINTH EDITION

“The difference between the right word and the almost right word is the difference between lightning and a lightning bug.”
—Mark Twain

I live down the street from Samuel Clemens’ (aka Mark Twain) home in Hartford, Connecticut. I refer to his quotation because he is a notable author who wrote with familiarity about our spoken language. Sometimes these spoken words are objectionable and more appropriate words have evolved over time. The editors of the ninth edition of the Glossary of Prosthodontic Terms ensured that the spoken vernacular is represented, although it may be nonstandard in formal circumstances. I hope that authors, poster presenters, and lecturers will use this edition as a guide for the “right word”.

This ninth edition of the Glossary of Prosthodontic Terms upholds the same objectives and standards as it did when it was first authored by the Academy of Denture Prosthetics in 1956. Throughout the world of prosthodontics, it has been valued as a reference for “uniform terminology [that] would permit authors to discuss their concepts and techniques and be sure that these would be understood by those who would read the articles, regardless of the geographic location or the specialty of the reader.”1 The generation of new terms and the modification of the old definitions, significant as much today as they were a century ago, are a resounding hallmark in the collective advancements of new knowledge in our specialty.

The Fellows of the Academy of Prosthodontics, with the leadership of the Glossary of Prosthodontic Terms Committee, have strived to faithfully execute the duties of lexicographers. It holds true throughout these several decades that we should continue the improvement of this document with contributions by many prosthodontic organizations regardless of geographic location or political affiliations. Acknowledgments are recognized by many of the Academy fellowship, too many to name individually, with whom we have consulted for expert opinion. Also recognized are Gary Goldstein, Charles Goodacre, Albert Guckes, Steven Morgan, Stephen Rosenstiel, Clifford VanBlarcom, and Jonathan Wiens for their contributions to the Glossary, which have spanned many decades. We thank them for guiding us in this monumental project and teaching us the objectiveness and the standards for evidence-based dentistry to be passed on to the next generation of dentists.

Keith J. Ferro, DMD

1Glossary of Prosthodontic Terms, Edition One, J Prosthet Dent 1956;1-34

PREFACE TO THE FIRST EDITION

This Glossary is a collection of words and terms and their special connotations in the art and science of prosthodontics. It is in the nature of a progress report in a tremendous effort to standardize the nomenclature used in this field. The advantages to the dental profession of a successful effort in this direction are manifold. The most important of these is that the use of a uniform terminology would permit authors to discuss their concepts and techniques and be sure that these would be understood by those who would read the articles, regardless of the geographic location or the specialty of the reader.

The need for a glossary of terms used in prosthodontics has been recognized for many years. In 1923, Ottofy stated, “It is to be hoped that members of the profession and specialists through their organizations will reach an agreement as to the terms to be given preference or to be used exclusively.” He called particular notice to the confused state of the prosthodontic terminology of that time, and it is even worse now because of the progress in the art and science of prosthodontics. Many new terms and words intended to describe or explain modern philosophies or procedures have been added to the
literature. Authors, clinicians, and teachers have ascribed many different interpretations and meanings to the same terms and words. Many “old” terms have been given “new” definitions by contemporary authors. Many “old” terms have been redefined in the light of the increased knowledge of the problems of prostho-dontics.

Through the years, individuals, specialty groups, and the Bureau of Library and Indexing of the American Dental Association have made many sincere attempts to develop a standard and acceptable nomenclature in dentistry. The major obstacle has been the difficulty in obtaining universal acceptance of proposed interpretations. The Academy of Denture Prosthetics has studied the problem throughout its existence and, until recently, has reached unanimous agreement on very few terms. This was in spite of sincere and valiant efforts on the part of the nomenclature committees, and it was due to the wide differences of opinion and background among those who considered the committees’ recommendations. This lack of progress was most discouraging, but three years ago it was agreed by the Fellowship of the Academy that this Glossary would be prepared, and that the majority opinion would be adopted. This decision made possible real progress toward the ultimate goal—a universal terminology for prosthodontics.

The “workshop” technique was used in the course of two meetings of the Academy for the study of nearly 1000 words or terms. The Nomenclature Committee of the Academy restudied the results of these “workshop” sessions. At least sixteen outstanding prosthodontists have given serious study to each term included in this Glossary. The definitions represent a composite of their understanding of the terms. The Fellows of the Academy of Denture Prosthetics have combined their efforts to serve as lexicographers.

The chief role of a lexicographer is to record the current usage of words. The chief function of words in science is to convey meaning. The chief role of a lexicographer is to record the current usage of words. The chief function of words in science is to convey meaning. The challenge of a lexicographer is to express the same idea or concept, he should indicate the preference on the basis of logic and other considerations.

Many instances could be cited in the Glossary where the Academy and its Nomenclature Committee have performed these various “duties” of the lexicographer. Certain terms were determined to be objectionable for some reason and are marked (Obj). Some new terms have been added which seem to express the desired idea or meanings more accurately than the corresponding terms in current usage. Where more than one term which carries the same connotation was found, the preferred term is listed first. Likewise, when more than one definition was assigned to the same term, the preferred definition is listed first. These decisions were made on the basis of majority opinion. It is hoped that eventually obsolete or objectionable terms and terms which tend to mislead and confuse will be eliminated entirely.

This, the first edition of the Glossary, is offered to the dental profession for its consideration. Since it is recognized that there are some terms that have not been included and that some other terms and definitions that may be objectionable to some authorities have been included, revisions will be necessary from time to time. Constructive suggestions are invited, and these will be given thorough consideration in future editions. In its present form, this Glossary can serve as a good temporary standard.

It is impossible to give due credit here to all that have worked to make this Glossary possible. The Fellows of the Academy of Denture Prosthetics have supplied the fundamental information and have made the necessary decisions. The Editorial Council of THE JOURNAL OF PROSTHETIC DENTISTRY, and The C. V. Mosby Company, its publisher, have provided encouragement and technical assistance in its development. Special acknowledgment is due to Dr George B. Denton of the Bureau of Library and Indexing of the American Dental Association, for his advice and counsel, and to Mrs. Marice K. Musgrove and Miss Barbara Eichhorn for the tremendous amount of secretarial work which was necessary. Acknowledgment is made, also, to certain dictionaries and textbooks from which the definitions for some of the terms have been taken. These are: Dorland, W. A. Newman, The American Illustrated Medical Dictionary, ed. 22, Philadelphia, 1951, W. B. Saunders Company (Dor.); Dunning, William B., and Davenport, S. Ellsworth, Jr., A Dictionary of Dental Science and Art, Philadelphia, 1936, P. Blakiston’s Son & Company, Inc. (D. & D.); Swenson, Merrill G., and Terkla, Louis G., Partial Dentures, St. Louis, 1955, The C. V. Mosby Company (S.); Blakiston’s New Gould Medical Dictionary, ed. 1, Philadelphia, 1949, The Blakiston Company (Gould). To all of these, the Nomenclature Committee expresses its gratitude.

THE NOMENCLATURE COMMITTEE

ACADEMY OF DENTURE PROSTHETICS

1The recent edition designates an objectionable (obj in previous editions) term as slang and nonstandard.

CONTRIBUTIONS TO THE NINTH EDITION OF THE GLOSSARY OF PROSTHODONTIC TERMS WERE REQUESTED FROM THE FOLLOWING ORGANIZATIONS:

The Academy of Prosthodontics
The American Academy of Esthetic Dentistry
The American Academy of Fixed Prosthodontics
The American Academy of Implant Dentistry
The American Academy of Maxillofacial Prosthetics
The American Academy of Restorative Dentistry
The American Board of Prosthodontics
The American College of Prosthodontists
The American Dental Education Association
The American Equilibration Society
The American Prosthetic Dentists Society
The Association of Prosthodontists of Canada
The Australian Prosthetic Dentists Society
The British Society for the Study of Prosthetic Dentistry
The Greater New York Academy of Prosthodontics
The Indian Prosthetic Society
The International Academy of Gnathology-American Section
The International Journal of Prosthodontics
The Iranian Prosthetic Journal
The Italian Academy of Prosthetic Dentistry
The Journal of Prosthetic Dentistry
The Journal of Prosthodontics
The Korean Academy of Prosthodontics
The Northeastern Gnathological Society
The Pacific Coast Society for Prosthodontics
The Swiss Society of Reconstructive Dentistry
The Turkish Prostodontics and Implantology Association

THE JOURNAL OF PROSTHETIC DENTISTRY
EXPLANATORY NOTES

Entries

Main entries

Any boldface letter or combination of letters that is set flush with the left-hand margin of each page constitutes a main entry or main-entry word. Such main entries may consist of letters, letters joined by hyphens, or letters separated by one or more spaces:

- glare ... vb
- glass-ceramics ... n
- gold foil ... n

The subsequent explanation in lightface type that follows each main entry on the same line and, as necessary, on succeeding indented lines explains its inclusion in the glossary. Variations in compound words are frequent and widespread. Generally, although several acceptable variations may occur, one single style for any compound word has been chosen, usually on the basis of its frequency of occurrence, because that usually is its predominant form.

Order of main entries

All main entries are listed in their alphabetic order, letter by letter, without regard to intervening spaces or hyphens; that is, *iatrogenic* follows *l-bar clasp*. Generally accepted abbreviations have been spelled out in the alphabetic order. Full words come before parts of words made with the same letters.

Homographs

Some main entries have precisely the same written form. Two or more similarly spelled words are distinguished by superscript numerals that precede each word:

- 1 lute ... n
- 1 articulate ... vb
- 2 lute ... vt
- 2 articulate ... adj

Homographs are generally entered in order of their first use in the English language.

Guide words

Pairs of words, termed *guide words*, are printed at the top of each page. All main entries that fall alphabetically between the guide words are found on that page. The first guide word is alphabetically the first entry on the page, and the second guide word is the last entry:

- agenesis • alveolar resorption

Variants

If a main entry is followed by another variation of the word with another spelling, the two spellings are equal variants. Both may be assumed to be standard, and either one may be used according to personal inclination:

- color or colour

Run-on entries

A main entry may be followed by one or more derivatives or by a homograph with a different functional label. These constitute run-on entries. Each is introduced by a lightface dash and each has a functional label. They are, however, not defined because their meanings are readily derived from the root word’s meaning:

- 2 curve ... vb ... -curved ... -curving ... vi

FUNCTIONAL LABELS

An italic label indicating a part of speech or some other functional classification follows the main entry. The eight standard parts of speech are:

- adjective ... adj
- adverb ... adv
- conjunction ... conj
- interjection ... interj
- noun ... n
- preposition ... prep
- pronoun ... pron
- verb ... vb

If a verb is *transitive* and *intransitive*, the functional labels *vt* and *vi* introduce the subdivisions. Other italicized labels used to indicate functional classifications that are not traditional parts of speech are:

- *-prefix*
- *-suffix*
- *-trademark*

CAPITALIZATION

Most main entries in this glossary begin with a lowercase letter. Some, however, begin with an uppercase letter, which indicates that the word is usually capitalized:

- myocentric
- Myo-monitor

The capitalization of entries that are open or hyphenated compounds is indicated by the form of the entry:

- Dolder bar ...
- curve of Spee ...
- Davis crown ...

GPT terms related to the main entry are capitalized and placed after the definition. Non-GPT related terms are in lowercase, italicized, and placed after the definition.

ETYMOLOGY

All material in square brackets preceding the definition constitutes the etymology. Etymology traces a vocabulary entry as far back as possible in English, and, where possible, its origins.

DATES

Some main entries will have a date enclosed in parentheses immediately preceding the boldface colon that introduces the first sense or sense number when one is present. This represents the date of earliest recorded use, in English, as far as could be determined. Many prosthodontic terms have evolved without prior dating. As such, few dates appear in this glossary.

USAGE

Usage notes

Only one status label (temporal) is used in this glossary to denote that a word, the sense of a word, or a phrase is not part of the standard vocabulary of prosthodontics. The label *obs* for “obsolete” means that there is no evidence to support its use in current literature:

- balancing side ... obs ... syn, NONWORKING-SIDE

The label *obs* is a comment by the editorial staff on the word being defined. An appropriate definition is provided where no current term is available or, alternatively, current acceptable terminology is suggested.

The stylistic label *slang* is used with words or senses that are especially inappropriate or in contexts of extreme informality. There is no satisfactory objective test for slang. Many are composed of shortened forms or extravagant or fictitious figures of speech:
bite registration ... n ... slang ... syn, MAXILLOMANDIBULAR RELATIONSHIP RECORD
suck-down ... n ... slang ... syn, VACUUM THERMOMOLD

The stylistic label nonstand for “nonstandard” is used for words or senses that conform to a widespread pattern of usage in informality that differs in choice of word or expression from that of the general prosthodontic community language standard. In fact, many words, invariably nonstandard, are in our spoken vernacular:

black triangle ... nonstand ... syn, INTERDENTAL GINGIVAL SPACE
pink porcelain ... nonstand ... syn, GINGIVAL PORCELAIN

Usage paragraphs

Brief usage notes or paragraphs, labeled Editorial note for usage, have been placed in several entries for words or phrases that are considered to present special problems in terms of confused or disputed usage. A usage paragraph typically summarizes the historic background of the issue and its associated body of opinion, compares these with available evidence of current usage, and often adds comment for the use of the inquirer.

DEFINITIONS

Division of senses

A boldface colon is used in this glossary to introduce a definition:

abrasive n (1853): a substance used for abrading, smoothing, or polishing

Boldface Arabic numerals separate the senses of a word that has more than one sense:

equilibrium n (1608): 1. a state of even adjustment between opposing forces; 2. the state or condition of a body in which any forces acting upon it are so arranged that their product at every point is zero; 3. a balance between active forces and negative resistance

The system of separating the various senses of a word by numerals is strictly a lexical convenience. It tends to reflect something of the semantic relationship, but it may establish a hierarchy of importance within them. Sometimes a particular relationship between senses is suggested by use of an italicized sense divider: comp (for compare). A brief statement that discriminates words of closely associated meaning has been placed in some entries. They are signaled by an italic: syn (for synonym). Italicized sense dividers are followed by the all CAPITALIZED glossary term or an italicized term if it is not in the glossary. With respect to the hierarchy of the use of a term, the primary term is defined.

Omission of a sense

Occasionally the glossary user, having turned to an entry, may not find an expected or hoped for particular sense. This usually means that the editors judged the sense insufficiently common or otherwise unimportant to include in the glossary. Because our language is dynamic, revision by future editors may reflect changes in the sense of a word not found in this edition.
ABBREVIATIONS USED IN THIS WORK

abbr  ... abbreviation
adj  ... adjective
adv  ... adverb
c    ... century
circa ...
contr ... contraction
comp ... compare
GPT ... Glossary of Prosthodontic Terms, Edition 1, J Prosthet Dent 1956 (March); Appendix No. 2 inserted supplemental between 1:286 and 1:287
GPT-2 ... Glossary of Prosthodontic Terms, Edition 2, J Prosthet Dent 1960;10(6); Part Two, inserted supplemental after page 1200 of volume 10

THE JOURNAL OF PROSTHETIC DENTISTRY
Abbe flap • acrylic resin veneer

A

Abbe flap \ˈabē flāp\ : eponym for a lip switch operation; a triangular, full-thickness flap from the mandibular lip used to fill in a defect in the maxillary lip; specifically applied to the midportion of the maxillary or mandibular lip; orig. Robert Abbe, surgeon, New York, NY, 1851-1928; syn, LIP SWITCH OPERATION, ESTLANDER'S OPERATION
Abbe R. A new plastic operation for the relief of deformity due to double harelip. Med Rec 1898;53:477

abduct \əbˈdukt\ vt (1834): to draw away from the median plane; comp, ADDUCT

aberrant \əˈbər-ənt\ adj (ca. 1798): 1. a deviation from the normal or usual course, form, or location; 2. straying from the normal way

abfraction \əbˈfrak-shən\ n (1991): the pathologic loss of hard tooth structure caused by biomechanical loading forces; such loss is thought to be the result of flexure and chemical fatigue degradation of enamel and/or dentin at some location distant from the actual point of loading; syn, NONCARIOUS CERVICAL LESION; comp, ABLATION, ABRASION, and EROSION

ablation \əˈblā-shən\ n (15c): 1. separation or detachment; extirpation; eradication; 2. removal of a part, especially by cutting; comp, ABRATION, REMOVAL, NONCARIOUS CERVICAL LESION

abrade \əˈbrād\ vt (1677): to rub away the external covering or layer of a part; comp ATRITION, EROSION

abrasion \əˈbrā-shən\ n (1656): 1. the wearing away of a substance or structure (such as the skin or the teeth) through some unusual or abnormal mechanical process; 2. an abnormal wearing away of the tooth substance by causes other than mastication; comp, ATRITION, EROSION

abrasive \əˈbrās-iv, -ziv\ adj (1875): 1. tending to abrade; 2. causing irritation; abrasively adv; abrasiveness n

abrasivity \əˈbrās-i-tē, -ziv-i-tē\ n (1998): the property of one material to wear away another material by means of frictional contact

abscopal effect: occurs when the localized radiotherapy of a primary tumor results in the regression of distant secondary metastatic cancer

absorbed dose \əbˈsərd-bəd\, -ˈzərd-bəd\ dōs\ə\ n (1975): the amount of energy from ionizing radiation absorbed per unit mass of matter, expressed in Gray units; comp, GRAY, RAD

absorpance \əbˈsərp-səns\ n (ca. 1931): the ratio of the radiant energy absorbed by a body to that incident upon it

absorption \əbˈsərp-shən\ n (1741): 1. the uptake of substances into or through tissues, e.g., mucosa, skin, and intestine; 2. in radiology, the uptake of energy by matter with which the radiation interacts; comp, ABSORPTION OF RADIATION, ADSORPTION

abutment \əˈbət-mənt\ n (1634): 1. that part of a structure that directly receives thrust or pressure; an anchorage; 2. a tooth, a portion of a tooth, or that portion of a dental implant that serves to support and/or retain a prosthesis; comp, ANGULATED ABUTMENT, HEALING ABUTMENT, DENTAL IMPLANT ABUTMENT, INTERMEDIATE ABUTMENT, ONE-PIECE ABUTMENT, STANDARD ABUTMENT, TWO-PIECE ABUTMENT

abutment alignment device: any device used for positioning a dental implant abutment on the dental implant body; syn, ABUTMENT ALIGNMENT COPING, ABUTMENT CLAMP

abutment analog (2005): a replica of the superior portion of a dental implant; usually used to provide an exact form of the dental implant abutment within the dental laboratory during fabrication of a prosthesis supported in part or whole by the dental implant

abutment clamp \əˈbət-mənt klämp\ (1998): syn, ABUTMENT ALIGNMENT DEVICE

abutment driver (2005): any hand instrument usually specifically made to assist in insertion and securing of a dental implant abutment to the superior portion of a dental implant

abutment healing cap (2005): syn, ABUTMENT HEALING SCREW

abutment healing screw n: any temporary cover used to provide a seal over the superior portion of a dental implant; most such covers are metallic and are intended for interim use following exposure of the dental implant's superior surface

abutment post (2005): the component of a dental implant abutment that extends into the internal structure of a dental implant and is used to provide retention and/or stability to the dental implant abutment

abutment screw n (1998): that component which secures the dental implant abutment to the dental implant body; comp, ATTACHMENT SCREW

accelerant \əkˈsər-lənt\ n (1916): a substance used to accelerate a process (as in enhancing the speed of a chemical reaction)

accelerator \əkˈsər-lər-ər\ n (1611): 1. a substance that speeds a chemical reaction; 2. in physiology, a nerve, muscle, or substance that quickens movement or response

accretion \əˈkrɛ-shən\ n (1615): 1. the process of enlargement or growth by a gradual buildup; 2. in periodontics, the accumulation on teeth or dental implants of foreign material such as plaque, calculus, and materia alba

achromatic \əˈkrə-mət-ik\ adj (1766): 1. lacking in hue and saturation, therefore, falling into a series of colors that varies only in lightness or brightness; 2. possessing no hue; being or involving black, gray, or white

achromatopsia \əˈkrə-mə-ta-pəs-ə\ n (2005): 1. Monochromatism; 2. a type of monochromatism in which all colors are perceived as achromatic: syn, achromatism, total color perception deficiency

acid-etched bonded splint: syn, RESIN-BONDED SPLINT

acid-etched bridge nonstand\d\ syn, RESIN-BONDED PROSTHESIS

acid-etched fixed partial denture: syn, RESIN-BONDED PROSTHESIS

acquire \əˈkwar\ vt (15c): 1. to obtain as one's own; to come to have as a new or additional trait, characteristic, or capability; 2. attained with time; acquired, acquiring

acquired occlusal position nonstand\d\ syn, MAXIMAL INTERCUSPAL POSITION

acquired occlusion nonstand\d\ syn, MAXIMAL INTERCUSPAL POSITION

acrylic resin \əˌkril-ik\ rēz\ən\: 1. pertaining to polymers of acrylic acid, methacrylic acid, or acrylonitrile; 2. any of a group of thermoplastic resins made by polymerizing esters of acrylic or methylmethacrylate acids

acrylic resin base \əˌkril-ik\ rēz\ən\ bās\ə\: a denture base made of acrylic resin

acrylic resin veneer: usually referring to a crown or fixed partial denture or removable partial denture; the veneering or lamination
of the facial surfaces of a crown or dental prosthesis by using acrylic resin; the intention of such veneering is to provide a natural tooth appearance to the viewable portions of the restoration

'activator letal-ti-vâ törn \ n; a removable orthodontic prosthesis intended to stimulate periodical muscles

"activator letal-ti-vâ törn \ n (1998): 1. a source of energy that promotes the initiator to begin a chemical reaction; 2. a substance used in small proportions to increase the effectiveness of an accelerator chemical; comp, INITIATOR

acute closed lock 'la-kayo-st klozd lôk\; a form of temporomandibular joint dysfunction characterized by sudden onset, short-term limitation in jaw movement caused by anterior displacement of the intra-articular disc and associated with pain, limitation of jaw opening to 25 to 30 mm (as measured in the incisor area) and, with jaw opening, a deflection of the mandible toward the affected joint

acute pain: pain having a brief and relatively severe course

adaptation 'dâd-ap-ta'shun \ n (1610): 1. the act or process of adapting; the state of being adapted; 2. the purpose of purposefully adapting two surfaces to provide intimate contact; 3. the progressive adaptive changes in sensitivity that regularly accompany continuous sensory stimulation or lack of stimulation; 4. in dentistry, (a) the degree of fit between a prosthesis and supporting structures, (b) the degree of proximity of a restorative material to a tooth preparation, (c) the adjustment of orthodontic bands to teeth

adaptation syndrome 'dâd-ap-ta'shun sin'drôm\; a syndrome characterized by alterations in response as an accommodation to the environment

adaptive occlusion: syn, MAXIMAL INTERCUSPAL POSITION

additive color mixture 'dâd-ti-fiy kul' ur mîl's'chu'ri; the perceived color that results when the same area of the retina of the eye is illuminated by lights of different spectral distribution such as by two colored lights; comp, SUBTRACTIVE COLOR SYSTEM

additive manufacturing file: acronym is AMF; data format proposed by the American Society of Testing and Materials (ASTM); this file is used in additive manufacturing of any three-dimensional (3D) object to be fabricated on any 3D printer; AMF has shape and composition for color, materials, and texture

adduct 'a-dukt, -'a-'vt (1836): to draw toward the median plane or toward the axial line; comp, ABDUCT

adherence 'lad-hir'ens, -enz \ n (1531): the act, quality, or action of adhering; persistent attachment

adhesion 'lad-hê'zhun \ n (1624): 1. the property of remaining in close proximity, as resulting from the physical attraction of molecules to a substance or molecular attraction existing between the surfaces of bodies in contact; 2. the stable joining of parts to each other, which may occur abnormally; 3. a fibrous band or structure by which parts abnormally adhere; comp, CAPSULAR FIBROSIS, FIBROUS ADHESION, INTRACAPSULAR ADHESION, MYOFIBROSCAPULAR CONTRACTURE

'adhesive 'lad-hê'siv, -ziv \ adj (1670): sticky or tenacious

"adhesive 'lad-hê'siv, -ziv \ n (1912): 1. any substance that creates close adherence to or on adjoining surfaces; 2. a luting agent; comp, DENTURE ADHESIVE, MAXILLOFACIAL PROSTHETIC ADHESIVE

adhesive capsulitis 'lad-hê'siv, ziv käp sul-tîs\; in the temporomandibular joint, any situation in which the disc is in its normal position, the joint space volume is decreased, and its motion is restricted

acrylic resin veneer • age atrophy

adhesive failure 'lad-hê'siv, ziv fâl'yur \ (1998): bond failure at an interface between two materials because of tensile or shear force; comp, COHESIVE FAILURE

adhesive resin: any resin material with incorporated adhesive chemicals such as 10-methacryloyloxydecyl dihydrogen phosphate (MDP), an organophosphate, or 4-methacryloxyethyl trimellitate anhydride (4-META) and related carboxyl-modified acrylic resins; in dentistry, to describe adhesive agents used for the luting of fixed dental prostheses and veneering resin to metal alloy

adiadochokinesia 'lad-e-a dô cho kî nê'zha\ n; inability to perform rapid alternating movements, such as opening and closing the jaws or lips, raising and lowering the eyebrows, or tapping the finger

adipose atrophy 'lad-t-pôs 'ât-ra-fê's; reduction of fatty tissue

adjustable anterior guidance 'la-jyôst's bûl ân-tîr'ê or gîd nès\; an anterior guide on an articulator whose surface may be altered to provide desired guidance of the articulator’s movement mechanism; the guide may be programmed (calibrated) to accept eccentric interocclusal records

adjustable articulator 'la-jyôst's bull âr-tûk ya-lâ'to'rei; an articulator that allows some limited adjustment in the sagittal and horizontal planes to simulate recorded mandibular movements; comp, ARTICULATOR

adjustable axis facebow: syn, AVERAGE AXIS FACEBOW, FACEBOW

adjustment 'a-jyôst' mant \ n (1644): 1. the act or process of modifying physical parts; 2. in dentistry, a modification made on a dental prosthesis or natural tooth to enhance fit, function, or acceptance by the patient; comp, OCCLUSAL ADJUSTMENT, OCCLUSAL RESHAPING, ESTHETIC RESHAPING

adsorption 'lad-sôrp shun, -zôrp \ n (1882): the adhesion, in an extremely thin layer, of molecules to the surfaces of liquids or solids with which they are in contact; comp ABSORPTION

adult speech aid prosthesis 'la-dûlt' spech âd prôs-the'hê'sis\; a definitive maxillofacial prosthesis that can improve speech in adult cleft palate patients either by obturating (sealing off) a palatal cleft or fistula, or occasionally by assisting an incompetent soft palate; both mechanisms are necessary to achieve palatopharyngeal closure; Editorial note for usage: generally this prosthesis is fabricated when no further growth is anticipated and the objective is to achieve long-term use, hence, more precise materials and techniques are used; occasionally such procedures are accomplished in conjunction with precision attachments in fixed dental prostheses undertaken on some or all maxillary teeth to achieve improved esthetics; syn, PROSTHETIC SPEECH AID, SPEECH AID, SPEECH AID PROSTHESIS, SPEECH BULB

afterimage 'laf ter im\, n (1874): in visual acuity, a prolongation or renewal of a visual sensory experience, ascribable to residual excitation after external stimuli have ceased to operate

afterloading technique 'la-fîrt-lô'dîng têk-nêk\; in therapeutic radiology, the use of applicators for brachytherapy so designed that they may be quickly loaded with radioactive sources after placement within the patient

agar 'a'gâr\, a gar\ n (1889): a complex sulfated polymer of galactose units, extracted from Gelidium cartilagineum, Gracilaria confervoides, and related red algae; it is a mucilaginous substance that melts at approximately 100° C and solidifies into a gel at approximately 40° C; it is not digested by most bacteria and is used as a gelation agent in dental impression materials and a solid culture media for microorganisms

age atrophy 'a'jî ât'ra-fê's; a wasting away; the normal diminution of all tissues as a result of advanced age

THE JOURNAL OF PROSTHETIC DENTISTRY
agenesis • alveolar resorption

agenesis [əˈdʒɛn-sɪs] n (ca. 1879): absence, failure of formation, or imperfect development of any body part; comp, CONDYLAN AGNESIS

agnathia [aɡ-nɑːθi-ə] n: a developmental anomaly characterized by absence of the mandible

agnosia [əɡ-ˈnɔs-ə] n (ca. 1900): diminution or loss of the ability to recognize the import of sensory stimuli; the varieties correspond with the senses and are distinguished as auditory, gustatory, olfactory, tactile, and visual

agonist [əˈɡɔn-ɪst] n (ca. 1626): 1. in physiology, a muscle that is controlled by the action of an antagonist with which it is paired; 2. in anatomy, a prime mover; 3. in pharmacology, a drug that has an affinity for and stimulates physiologic activity in cell receptors normally stimulated by naturally occurring substances

air abrasion: syn, AIRBORNE-PARTICLE ABRASION

air-bone gap [ərˈbɔrn ˈgæp]: in audiology, the difference in patient acuity to sound transmitted through air and through bone that reflects hearing loss as a result of middle ear dysfunction or pathology

air chamber: syn, RELIEF AREA

air conduction: [ərˈkɔn-dəkˈʃun] the normal process of conducting sound waves through the ear canal to the tympanic membrane

air dose [ər dəs]: in therapeutic radiology, the amount of energy absorbed per unit mass of tissue at a given site, in air

airborne-particle abrasion [ərˈbɔrn ˈpɑrt-ɪ-kəl ˈæbrə-zhən]: the process of altering the surface of a material through the use of abrasive particles propelled by compressed air or other gases

Akers clasp [əkər klɑːsp] eponym for a cast circumferential clasp; this clasp improved and standardized the one-piece casting method for fabricating gold alloy removable partial denture frameworks in the early 1920s; orig, Polk E. Akers, dentist, Chicago, IL, U.S.A.; comp, COMBINATION CLASP, SUPRABULGE CLASP, WROUGHT WIRE CLASP

ala [ˈa-lə] n (1738): a wing or a wing-like anatomic part or process; alae [ə-lē] pl, [ə-lər] adj

ala nasi [ˈa-lə násˈɛː] n: in anatomy, the cartilaginous processes forming the wing-like flare of each nares

ala-tragus line [ˈa-lə trəˈɡæs lɪn] a line running from the inferior border of the ala of the nose to the superior border on the tragus of the ear; it is frequently used, with a third point on the opposing tragus, for the purpose of establishing the ala-tragus plane; ideally the ala-tragus plane is considered to be parallel to the occlusal plane; the occlusal plane is at an angle of approximately 10 degrees relative to the Frankfurt horizontal plane, when viewed in the mid-sagittal plane; syn, CAMPER’S LINE

alginate n (ca. 1909): syn, IRREVERSIBLE HYDROCOLLOID

all-ceramic restoration: syn, CERAMIC RESTORATION

all-polymer prosthesis: a fixed partial denture fabricated from non-metallic or ceramic components typically composed of an internal glass fiber-reinforced composite framework covered by a particulate composite resin; syn, FIBER-REINFORCED COMPOSITE RESIN FIXED PARTIAL DENTURE (FRC-FPD)

allodynia [əl ˈdɑ dəlni-ə] n: pain resulting from a non-noxious stimulus to normal skin or mucosa

allogenic [əˈlɔ-dʒɛn-ɪk] adj (1963): in transplantation biology, denoting individuals (or tissues) that are of the same species however antigenically distinct; syn, homologous

allogenic graft: syn, HOMOGRRAFT

allograft [əl ˈɑ-grɑft] n (1964): a graft of tissue between genetically dissimilar members of the same species; syn, ALLOGENEIC GRAFT, HOMOGRRAFT

alloplast [əl ˈɑ-plɑst] n 1. an inert foreign body used for implantation within tissue; 2. a material originating from a nonliving source that surgically replaces missing tissue or augments that which remains

alloplastic graft [ələ-plɑsˈtɪk ɡrɑft]: a graft consisting of an inert material

alloplastic material [ələ-pləstɪk ˈmætərɪl] any non-biologic material suitable for implantation as an alloplast

alloy [əlˈɔi] a-loi n (14c): a mixture of two or more metals or metalloids that are mutually soluble in the molten state; distinguished as binary, ternary, quaternary, etc., depending on the number of metals within the mixture; alloying elements are added to alter the hardness, strength, and toughness of a metallic element, thus obtaining properties not found in a pure metal; alloys may also be classified on the basis of their behavior when solidified; comp, BASE METAL, HIGH NOBLE ALLOY, NOBLE METAL ALLOY

allopying element [ələ-loiˈɪŋ əˈlə-mɛnt] (1998): metallic or non-metallic elements added to or retained by a pure metal for the purpose of giving that metal special properties

alpha particle [əl′foʊtər ˈpɑrt-ɪkl] n (1903): a positively charged nuclear particle identical with the nucleus of a helium atom that consists of two protons and two neutrons and is ejected at high speed in certain radioactive transformations

altered cast [əlˈtɛrd kɑst]: a final cast that is revised in part before processing a denture base; syn, CORRECTED CAST, MODIFIED CAST

altered cast removable partial denture impression [əlˈtɛrd kɑst rəˈmi-təl dənˈtʃʊr ɪnˈpɜr•zən•mənt] an impression made of a negative likeness of a portion or portions of the edentulous denture bearing area made independent of and after the initial impression of the natural teeth; this technique uses an impression tray(s) attached to the framework of the removable partial denture, or its likeness

aluminous porcelain [əlˈmi-nyəs pəˈsɔrən] a ceramic material composed of a glass matrix phase with 35% or more of aluminum oxide, by volume

aluminum oxide [əlˈmi-nyəm aʊˈsaɪd] 1. a metallic oxide constituent of dental porcelain that increases hardness and viscosity; 2. a high-strength ceramic crystal dispersed throughout a glassy phase to increase its strength as in aluminous dental porcelain used to fabricate aluminous porcelain crowns; 3. a finely ground ceramic particle (frequently 50 |m) often used in conjunction with airborne-particle abrasion of metal castings before the application of porcelain as with metal ceramic restorations; syn, alumina

alveolar [əlˈvɛ-ərəl] adj (1799): the type of the jaw bone that retains the teeth

alveolar augmentation [əlˈvɛ-ərəl əˌɡən-ə-ˈtʃʊr əˈmɛn-təl ˈʃən]: any surgical procedure used to alter the contour of the residual alveolar ridge

alveolar bone [əlˈvɛ-ərəl bən] the bony portion of the mandible or maxillae in which the roots of the teeth are held by fibers of the periodontal ligament; syn, ALVEOLUS, dental alveolus

alveolar crest: syn, RESIDUAL RIDGE CREST

alveolar mucosa [əlˈvɛ-ərəl myək-ˈkɔsə]: the lining mucosal covering of the alveolar process, loosely attached to the bone

alveolar process [əlˈvɛ-ərəl ˈprə-səs]: the cancellous and compact bony structure that surrounds and supports the teeth

alveolar reconstruction [əlˈvɛ-ərəl ˌrek-ən-strəkˈʃən] any surgical procedure used to recreate an edentulous ridge where there is a severely resorbed residual alveolar ridge

alveolar resorption: syn, RESIDUAL RIDGE RESORPTION
alveolar ridge: syn, RESIDUAL RIDGE
alveolectomy n comp, OSTECTOMY
alveoplasty n comp, OSTECTOMY
alveolus n (ca. 1706): one of the cavities or sockets within the alveolar process of the maxillae or mandible in which the attachment complex held the root of a tooth that was removed; alveoli n vē-ā-li, pl
amalgam n dental amalgam is an alloy of mercury, silver, copper, and tin, which may also contain palladium, zinc, and other elements to improve handling characteristics and clinical performance; syn, silver amalgam
ambient \AM-bee-un\ adj existing or present on all sides; encompassing
AMF: acronym for ADDITIVE MANUFACTURING FILE
amorphous \a-mōr-fus\ n without crystalline structure; having random arrangement of atoms in space
analgesia n (ca. 1706): absence of pain, designating particularly the relief of pain without loss of consciousness; a term denoting a “total absence of all sensibility,” written by Oliver Wendell Holmes for William T. G. Morton (1846)
1 analgesic \a-nal-jē\ zīk, -sık\ adj relieving pain
2 analgesic \a-nal-jē\ zīk, -sık n an agent that alleviates pain without causing loss of consciousness; comp, ANALGESIC BLOCKING AGENT, ANALGESIC DIAGNOSTIC BLOCK
analgesic blocking agent \a-nal-jē zīk bloık ing\ a-jent\: any analgesic that blocks or prohibits sensory perception
analgesic diagnostic block \a-nal-jē zīk \di-ag-nōs\ 넘 bloık\: the selective use of a local anesthetic injection or application of a topical anesthetic to identify a pain source
analog \a-nā-lōg, -ōg\ n (1826): 1. in dentistry, something that is analogous, in part or whole, to something else; i.e., a replica of a portion of an implant abutment made of brass, aluminum, stainless steel, or plastic; 2. an organ similar in function to an organ of another animal or plant but with different structure and origin; analogue
anamnesis n (1593): 1. a recalling to mind; a reminiscence; 2. the past history of disease or injury based on the patient’s memory or recall at the time of interview and examination; 3. a preliminary past medical history of a medical or psychiatric patient; nes-thes pl
anatomic crown \an-a-tōmˈik kroun\: the portion of a natural tooth that extends coronal from the cemento-enamel junction; syn, anatomical crown
anatomic landmark \an-a-tōmˈik länd márk\: a recognizable anatomic structure used as a point of reference
anatomic occlusion \an-a-tōmˈik a-kloʊ-zhun\: an occlusal arrangement for dental prostheses wherein the posterior artificial teeth have masticatory surfaces that closely resemble those of the natural healthy dentition and articulate with similar natural or artificial surfaces; syn, anatomical occlusion
anatomic teeth \an-a-tōmˈik tēth\: 1. artificial teeth that duplicate the anatomic forms of natural teeth; 2. teeth that have prominent cusps on the masticating surfaces and that are designed to articulate with the teeth of the opposing natural or prosthetic dentition; 3. anatomic teeth with cuspal inclinations greater than 0 degrees that tend to replicate natural tooth anatomy; Editorial note for usage: cusped teeth (30 to 45 degrees) are considered anatomic teeth. Modified occlusal forms are those with a 20-degree or less cuspal inclination; comp, SEMI-ANATOMICAL ARTIFICIAL TEETH

**alveolar ridge** • Angle’s classification of occlusion

anatomy \a-nā-tō-mē\ n (14c): 1. a branch of morphology that involves the structures of organs; 2. the structural makeup esp. of an organ or any of its parts; -mies pl; anatomic \an-a-tōmˈik\ or anatomical \an-a-tōmˈik\

ANB angle \AN B\: in cephalometric analysis, the angle formed between the nasion point A line and the nasion point B line

anchorage area \ăng-kər-iж\ kərˈiʒ\: that area which, by its situation, configuration, and/or preparation, is suitable for the retention of a prosthesis

anchor component nonstand: syn, ENDOSTEAL DENTAL IMPLANT

anchor element nonstand: syn, ENDOSTEAL DENTAL IMPLANT ABUTMENT ELEMENT(S)

ancillary device: syn, DEVICE

Anderson splint: eponym for a skeletal traction splint with pins inserted into proximal and distal ends of a fractured bone. Reduction is obtained by an external plate attached to the pins; orig, Roger Anderson, orthopedic surgeon, U.S.A., 1891-1971; syn, BIPHASIC SPLINT

Andrews bridge \än-droös brıдж\: eponym for the combination of a fixed partial denture incorporating a connecting bar with a removable partial denture that replaces teeth within the bar area, usually used for edentulous anterior spaces; the vertical walls of the bar may provide retention for the removable component; orig, James Andrews, dentist, U.S.A

anesthesia \än-thē-zhə\ n (ca. 1721): loss of feeling or sensation; anaesthesia

anesthesia dolorosa \än-thē-zhə-dəˈrō-sə\: pain within an area or region that is anesthetized

1 anesthetic \än-thē-zhĭk\ adj (1846): 1. capable of producing anesthesia; 2. lacking awareness or sensitivity

2 anesthetic \än-thē-zhĭk\ n (1848): 1. a substance that produces anesthesia; 2. something that brings relief

angle of gingival convergence \än-gĭ-gl ˌglı ˌUV jinˈji-val, -ˈjın-ˈji\-\ kən-ˈvür jen\: the angle of gingival convergence is located apical to the height of contour on the abutment tooth; it can be identified by viewing the angle formed by the tooth surface gingival to the survey line and the analyzing rod or undercut gauge of a surveyor as it contacts the height of contour

Schneider RL. Significance of abutment tooth angle of gingival convergence on removable partial denture retention. J Prosth Dent 1987;58:194-96

angle of incidence \än-gĭ-gl ˌUV ˌinˈsĭ-dens\: the angle formed between the axis of a light beam and a perpendicular to the object’s surface

angle of reflection \än-gĭ-gl ˌUV ˌri-flęk ˈshun\: the angle formed between the axis of a reflected light beam and a perpendicular to the object’s surface

angled abutment: syn, ANGULATED DENTAL IMPLANT ABUTMENT

angled implant: syn, ANGULATED DENTAL IMPLANT

Angle’s classification of occlusion \än-gəlˈklas-əˈfi-kəshən\: for a classification system of occlusion based on the intercuspation of the first molar teeth originally described by Angle as four major groups depending on the anteroposterior jaw...
Angle’s classification of occlusion • anterior nasal spine

relationship; Class I (normal occlusion or NEUTRO-OCCLUSION): the dental relationship in which there is normal anteroposterior relationship of the jaws, as indicated by intercuspual position of maxillary and mandibular molars, but with crowding and rotation of teeth elsewhere, i.e., a dental dysplasia or arch length deficiency; Class II (DISTO-OCCLUSION): the dental relationship in which the mandibular dental arch is posterior to the maxillary dental arch in one or both lateral segments; the mandibular first molar is distal to the maxillary first molar; Class II can be further subdivided into two divisions; Division 1: bilateral distal retraction with a narrow maxillary arch and protruding maxillary incisors. Subdivisions include right or left (unilaterally distal with other characteristics being the same); Division 2: bilateral distal with a normal or square-shaped maxillary arch, retruded maxillary central incisors, labially malposed maxillary lateral incisors, and an excessive vertical overlap. Subdivisions include right or left (unilaterally distal with other characteristics the same); Class III (MESIO-OCCLUSION): the dental relationship in which the mandibular arch is anterior to the maxillary arch in one or both lateral segments; the mandibular first molar is mesial to the maxillary first molar; the mandibular incisors are usually in anterior reverse articulation; subdivisions include right or left (unilaterally mesial with other characteristics the same); Class IV: the dental relationship in which the occlusal relations of the dental arches present the peculiar condition of being in distal occlusion in one lateral half and in mesial occlusion in the other (Class IV is no longer in use); orig. Edward Harley Angle, orthodontist, U.S.A., 1855–1930; Angle EM. Classification of malocclusion. Dental Cosmos 1899;41:248-64, 350-57

angular chelitis  vâng’gya-lér ki-ì-tìs’ve inflammation in the area of the modiolus causing redness and the production of fissures; syn, perleche

angulated dental implant: a dental implant placed in the bone such that its long axis of inclination varies considerably from a perpendicular relationship with the occlusal plane; syn, ANGLED IMPLANT; TILTED IMPLANT

angulated dental implant abutment  vâng’gya-lát’d  a-bút’mént’ (1998): any endosteal dental implant abutment that alters the long axis angulation between the dental implant and the dental implant abutment; syn, ANGLED ABUTMENT

ankyloglossia  vâng’ki-lo-glos’sé-ah, -glo-shá’ve n: the binding of the tip of the tongue to the floor of the mouth or the alveolar ridge as a result of abnormal attachment of the lingual frenum. This often restricts movement of the tongue, often because of the position of the lingual frenulum, resulting in speech impediments; may be complete or partial; syn, adherent tongue, lingua frenata, tongue-tie

ankylosis  vâng’kì-lo’sís’ve n (1713): immobility and consolidation of a joint or tooth as a result of injury, disease, or a surgical procedure; -loses pl, comp, BONY ANKYLOSIS, EXTRACAPSULAR ANKYLOSIS, FIBROUS ANKYLOSIS, INTRACAPSULAR ANKYLOSIS; syn, anchylosis

annael  â-nel’ve vt (1580): 1. to heat a material, such as metal or glass, followed by controlled cooling to remove internal stresses and create a desired degree of toughness, temper, or softness to a material; 2. to heat a material, such as gold foil, to volatilize and drive off impurities from its surface, thus increasing its cohesive properties; this process is termed degassing; 3. to homogenize an amalgam alloy by heating in an oven

annular  ân’ya-lér’ve n (1571): a term used to describe a ring-like anatomical structure

anodontia  vân’ot-dôn’shé-á’ve n: a rare dental condition characterized by congenital absence of all teeth (both deciduous and permanent); comp, HYPODONTIA, OLIGODONTIA

anodontism  n: syn, ANODONTIA

anomalous trichromatic vision  a-nóm-a-lús tr’i-kro-mát’ik vîzh’hún’ve: a form of defective color vision in which three stimuli are required for color matching, but the proportions in which they are matched differ significantly from those required by the normal trichromat. There are three forms of anomalous trichromatic vision: protanomalous, deuteranomalous, and tritanomalous

anomaly  a-nóm’a-lé-’n (1664): 1. something different, abnormal, peculiar, or not easily classified; 2. an aberration or deviation from normal anatomic growth, development, or function; 3. marked deviation from the normal standard, especially as a result of congenital defects; anomalies  a-nóm’a-léz’ve pl

ANS: acronym for ANTERIOR NASAL SPINE; the outline of the anterior nasal spine as seen on the lateral cephalometric radiograph; used as a cephalometric landmark

antagonist  ân-tâg’a-níst’ve n (1599): 1. a tooth in one jaw that articulates with a tooth in the other jaw; syn, dental antagonist; 2. a substance that tends to nullify the actions of another, as a drug that binds to cell receptors without eliciting a biologic response; 3. a muscle whose action is the direct opposite of another muscle

Ante’s Law: eponym, in fixed prosthodontics, for the observation that the combined pericemenial area of all abutment teeth supporting a fixed partial denture should be equal to or greater in pericemenial area compared with the tooth or teeth to be replaced; as formulated for removable dental prosthodontics, the combined pericemenial area of the abutment teeth plus the mucosal area of the denture base should be equal to or greater than the pericemenial area of the missing teeth; orig. Irwin H. Ante, dentist, Toronto, Ontario, Canada

Ante IH. The fundamental principles, design and construction of crown and bridge prosthesis. Dent Item Int 1928;50:215-32

anterior ân-tîr’s-ór’ve adj (1541): 1. situated in front of or on the front part; 2. the forward or ventral position; 3. a term used to denote the incisor or canine teeth or the forward region of the mouth

anterior deprogramming device  ân-tîr’s-ór de pró’grám’in-di’s’ve: an individually fabricated anterior guide table that allows mandibular motion without the influence of tooth contacts and facilitates the recording of maxillomandibular relationships; syn, LUCIA JIG

anterior disc displacement: syn, DISC DISPLACEMENT

anterior guidance  ân-tîr’s-ór gíd’n’s’ve: 1. the influence of the contacting surfaces of anterior teeth, limiting mandibular movements; 2. the influence of the contacting surfaces of the guide pin and anterior guide table on articulator movements; comp, ANTERIOR GUIDE TABLE; 3. the fabrication of a relationship of the anterior teeth preventing posterior tooth contact in all eccentric mandibular movements; comp, ANTERIOR PROTECTED ARTICULATION, GROUP FUNCTION, MUTUALLY PROTECTED ARTICULATION

anterior guide: syn, ANTERIOR GUIDE TABLE

anterior guide pin  ân-tîr’s-ór gíd pí’n’ve: that component of an articulator, generally a rigid rod attached to one member, contacting the anterior guide table on the opposing member. It is used for the purpose of maintaining the established vertical separation. The anterior guide pin and table, together with the condylar elements, direct the movements of the articulator’s separate members

anterior guide table  ân-tîr’s-ór gíd tâ’b’h’ve: that component of an articulator on which the anterior guide pin rests to maintain the occlusal vertical dimension and influence articulator movements; the guide table influences the degree of separation of the casts in all relationships; comp, CUSTOM GUIDE TABLE

anterior nasal spine  ân-tîr’s-ór nà’zál spín’ve: acronym is ANS; a sharp median bony process, adjacent to the inferior margin of the
anterior aperture of the nose and formed by the forward prolongation of the two maxillae

anterior open bite *obs, nonstand* syn, ANTERIOR OPEN OCCLUSAL RELATIONSHIP

anterior open occlusal relationship *van-tir e-or o pen a-klo`oz zal ri-l`a shen-ship`; the lack of anterior tooth contact in any occluding position of the posterior teeth; comp, APERTOGNATHIA

antior protected articulation *van-tir e-or pro-t`ek`tid ar-t`ik`ya-l`a shun`; a form of mutually protected articulation in which the vertical and horizontal overlap of the anterior teeth disengage the posterior teeth in all mandibular excursive movements; syn, CANINE PROTECTED ARTICULATION

antior reference point *van-tir e-or r`ef er-ens, r`ef ren point`; any point located on the midface that, together with two posterior reference points, establishes a reference plane

antior teeth *van-tir e-or t`e-th`; the maxillary and mandibular incisors and canines

antior tooth arrangement *van-tir e-or tooth a-ri-yen-men`; the positioning of the anterior teeth for esthetics and phonetics

antior tooth form *van-tir e-or toocht form`; the outline form as viewed in any selected plane and/or other contours of an anterior tooth

anteroposterior curve *van-ter-o-p`o-stir e-or k`urvi`; the atomic curve established by the occlusal alignment of the teeth, as projected onto the median plane, beginning with the cusp tip of the mandibular canine and following the buccal cusp tips of the premolar and molar teeth, continuing through the anterior border of the premolar and molar ramus, ending with the anterior most portion of the mandibular condyle; *orig, Ferdinand Graf Spee, anatomist, Germany, 1890; syn, CURVE OF SPEE

anti-Monson curve *syn, REVERSE CURVE; comp, PLEASURE CURVE, CURVE OF PLEASURE

anti-rotation *van-te-ro-t`a shun` (1998); a structural feature of some endoosteal dental implant components that prevents relative rotation of fastened parts; this feature may exist between a dental implant body and the dental implant abutment, and/or the dental implant abutment and dental implant abutment element(s)

antiflux *van-te-flux`s, nz* materials that prevent or confine sorder attachment or flow

antimetabolite *van-te-ma-tab`a-lit, n (1945); a substance that competes with, replaces, or antagonizes a particular metabolite

antineoplastic *van-te-ne`a-plas`tik, adj (1969); 1. inhibiting or preventing the development of neoplasms; inhibiting the maturation and proliferation of malignant cells; 2. an agent having such properties

antineoplastic drug *van-te-ne`a-plas`tik dregn`; an agent used in treatment or palliation of the symptoms of cancer

antitragus *van-tir`a-gus, n; a projection of the cartilage of the auricle in front of the cauda helicis, just above the lobule and posterior to the tragus, from which it is separated by the intertragal notch; comp, antitragi *van-tir`a-gi`

apatite *`ap-a-tit, n (1803); calcium phosphate of the composition Ca_{3}(PO_{4})_{2}OH; one of the mineral constituents of teeth and bones (with CaCO_{3})*

apertognathia *nz* a condition in which the anterior or posterior teeth are not in contact; syn, OPEN OCCLUSAL RELATIONSHIP

aperture *`ap e-cher, n (15c); an opening or open space; a hole

apex *`ap ekses, n (1601); 1. the uppermost point; the vertex; 2. in dentistry, the anatomic end of a tooth root; apexes or apices *pl* `ap ekses, ap `ih-

aphagia *`a fe`e-ah, -ja; nz* inability to swallow; abstention from eating

aphasia *`a fa`zh, n (1867); defect or loss of the power of expression by writing, speech or signs, or of comprehending written or spoken language as a result of disease or injury to the brain

aphonia *`a f`o ne`ah, n (1778); loss or absence of voice as a result of the failure of the vocal cords to vibrate properly

apical *`ap i kai, -`a pik, adj (1828); relating to or pertaining to the top or apex; apically *adv

aplasia *`ap pla`zh, -zh`eh, nz* defective development or congenital absence of an organ or tissue

aplastic *`ap-plas t`ik, adj* devoid of form; without development

Applegate’s Rules: *eponym for rules of modification spaces that govern application of the Kennedy system

appliance *n, slang, obs (1561); syn, DEVICE, PROSTHESIS

aposition *`ap a zish un, n (15c); the condition of being placed or fitted together; in juxtaposition or coadaptation

approximation *`ap prok`si ma shun, n (15c); 1. the process of drawing together; 2. the quality of being close or near; approximative *prok`si ma tivi, adj

apraxia *`ap prak se`ah, n (1888); the loss of ability to carry out familiar, purposeful movements in the absence of paralysis or other sensory or motor impairment, especially the inability to make proper use of an object

apron *n, obs, slang; syn, LINGUAL PLATE

arbitrary facebow *syn, AVERAGE AXIS FACEBOW

arc of closure *var u k`lo`zh zu`ru`; the circular or elliptic arc created by closure of the mandible, most often viewed in the mid-sagittal plane, in relation to a reference point on the mandible (frequently the mesial incisal edge of either mandibular central incisor’s mesial incisal edge)

arc therapy *var`kh theo`ah pe`a; in therapeutic radiology, external beam radiation in which the source of radiation is moved about the patient on an arc during treatment. Multiple arcs may be used. In some cases the beam is stationary and the patient is rotated in a vertical plane; comp, INTENSITY-MODULATED RADIATION THERAPY (IMRT)

arch bar *var`kh barz; a rigid bar and/or wire used for maxillomandibular fixation in the treatment of fractures of the maxillae and mandible and/or stabilization of injured teeth, generally attached to the remaining natural dentition and/or occlusal splints

arch form *var`kh form`; the geometric shape of the dental arch when viewed in the horizontal plane (square, tapering, ovoid, etc.)

arch length discrepancy *var`kh leng`kth di`skr`eph ens se; the abnormal relationship between the size of the mandible and/or the maxillae and their component teeth, especially as viewed and analyzed in the occlusal plane

arch wire *var`kh wir, nz* an orthodontic wire placed intraorally for the application of force

arcon *var`ko n, nz* contr, ARTICULATOR and CONDYLE; used to describe an articulator containing the condylar path elements within its upper member and the condylar elements within the lower member; comp, NONARCON

arcon articulator *var`kon ar t`ik ya`la tor; an articulator that applies the arcon design; this instrument maintains anatomic guidelines by the use of condylar analogs in the mandibular element and fossae assemblies within the maxillary element

arrow point tracer *var`o point tra`ser; 1. a mechanical device used to trace a pattern of mandibular movement in a selected plane, usually parallel to the occlusal plane; 2. a mechanical device with a marking point attached to one jaw and a graph plate or tracing
plane attached to the other jaw, it is used to record the direction and range of movements of the mandible; *Editorial note for usage: EXTRAORAL TRACER (ING), INTRAORAL TRACER (ING), and TRACING DEVICE are the primary terms; comp, CENTRAL BEARING TRACING DEVICE, CEPHALOMETRIC TRACING, COBLE BALANCER, EXTRAORAL TRACER, GOTHIC ARCH TRACER, INTRAORAL TRACING, MANDIBULAR TRACER, NEEDLE POINT TRACING, PANTOGRAPHIC TRACING, STYLUS TRACING, TRACING DEVICE

arrow point tracing: syn, STYLUS TRACING

arthralgia vär-thral ja, -je-a\n (ca. 1848): pain in a joint or joints

arthritis vär-thri\n\tsi \n (14c): inflammation of a joint or joints

arthrodial joint vär-thrö\dë al jönt\ts: a joint that allows gliding motion of the surfaces

arthrodial movement vär-thrö\dë al mōv\mente: gliding joint movement

arthrography vär-thrōp\a\n-thè\n: 1. roentgenography of a joint after injection of an opaque contrast material; 2. in dentistry, a diagnostic technique that entails filling the lower, upper, or both joint spaces of the temporomandibular joint with a contrast agent to enable radiographic evaluation of the joint and surrounding structures; used to diagnose or confirm disc displacements and perforations

arthropathy n (ca. 1860): a disease of a joint

arthroplasty vär-thrö\pla\s-tè\n: the surgical formation or reformation of a joint

arthrosis vär-thrö\sïs\ (1634): 1. a joint or articulation; 2. a degenerative disease of a joint

articular vär tık\ya-lër\ adj (15c): of or relating to a joint

articular capsule vär tık\ya-lër käp\sel\: the fibrous ligament that encloses a joint and limits its motion; it is lined with the synovial membrane

articular cartilage vär tık\ya-lër kär\tl\i: a thin layer of hyaline cartilage located on the joint surfaces of some bones; not found on the articular surfaces of the temporomandibular joints, that are covered with an avascular fibrous tissue

articular disc: a ring of fibrocartilage that separates the articular surface of a joint. Relative to the temporomandibular joint, the articular disc is a fibrous connective tissue disc located between the articulating surfaces of the mandibular condyle and temporal bone; comp, TEMPOROMANDIBULAR JOINT ARTICULAR DISC

1 articulate vär-tık\ya-lät\ vb (1691): 1. to join together as a joint; 2. the relating of contacting surfaces of the teeth or their artificial replicas in the maxillae to those in the mandible

2 articulate vär-tık\ya-lät\ (1586): in speech, to enunciate clearly or be clearly spoken; -fl\, adj

articulating paper vär-tık\ya-lät\ing pâ\per\: ink-coated paper strips used to locate and mark occlusal contacts

articulation vär-tık\ya-läs\a\n\shu\n (15c): 1. the place of union or junction between two or more bones of the skeleton; comp, CRANIOMANDIBULAR ARTICULATION, TEMPOROMANDIBULAR ARTICULATION; 2. in speech, the enunciation of words and sentences; syn, SPEECH ARTICULATION; 3. in dentistry, the static and dynamic contact relationship between the occlusal surfaces of the teeth during function; comp, ANTERIOR PROTECTED ARTICULATION, BALANCED ARTICULATION, DENTAL ARTICULATION, FUNCTIONAL ARTICULATION, MONOPLANE ARTICULATION, MUTUALLY PROTECTED ARTICULATION

articulator vär-tık\ya-lä\tor\ n: a mechanical instrument that represents the temporomandibular joints and jaws, to which maxillary and mandibular casts may be attached to simulate some or all mandibular movements; *Editorial note for usage: articulators are divisible into four classes; Class I articulator: a simple holding instrument capable of accepting a single static registration; vertical motion is possible; syn, NONADJUSTABLE ARTICULATOR; Class II articulator: an instrument that permits horizontal as well as vertical motion but does not orient the motion to the temporomandibular joints; Class III articulator: an instrument that simulates condylar pathways by using averages or mechanical equivalents for all or part of the motion; these instruments allow for orientation of the casts relative to the joints and may be arcon or nonarcon instruments; syn, SEMIADJUSTABLE ARTICULATOR; Class IV articulator: an instrument that will accept 3D dynamic registrations; these instruments allow for orientation of the casts to the temporomandibular joints and simulation of mandibular movements; syn, FULLY ADJUSTABLE ARTICULATOR, FULLY ADJUSTABLE GNATHOLOGIC ARTICULATOR

artfact vär ti-fäkt\ n (1821): 1. any characteristic product of human activity, i.e., any handmade object that could represent a particular culture or stage in its technological development; 2. a product of an artificial character caused by an extraneous agency; used in medicine to signify details or conditions that are misleading or unnatural because of imperfect materials or techniques

artificial crown vär ti-fiš\al krou\n: a restoration that restores missing tooth structure of three or more axial surfaces and the occlusal surface or incisal edge of a tooth with a material such as cast metal alloy, ceramics, resin, or a combination of materials; comp, COMPLETE CROWN, PARTIAL-COVERAGE CROWN, PARTIAL-COVERAGE RETAINER

artificial stone: syn, DENTAL STONE

asepsis və-sèp\si\, -\n\n (1892): 1. free from infection; 2. the prevention of contact with microorganisms

aseptic və-sèp\ti\, -\t\adj (ca. 1859): free of infection or septic material; sterile; free from pathogenic microorganisms; aseptically və-sep\ti\ˈ le\, adv

ASTM Committee F42: acronym for American Society of Testing Materials; the committee responsible for the development of standards in additive manufacturing

asymmetrical və sī\-mēt\ri-kal\ adj (1690): characterized by or pertaining to asymmetry

asymmetry və-sī\mī-t\trē\ n (1690): absence or lack of symmetry or balance; dissimilarity in corresponding parts or organs on opposite sides of the body

asymmetry of movement və-sī\mī-t\trē\ uv mōv\mente\n: the condition observed when mandibular movement has a lateral component on opening and closing, especially when viewed in the frontal plane

asymmetry of the mandible və-sī\mī-t\trē\ uv\ män\di\bú\n: the condition that exists when the right and left sides of the mandible are not mirror images of each other

atrophic fracture və tròf\fæk\frä\k\t\ˈ chér\: spontaneous fracture as a result of atrophy

atrophy və-trok\fē\ n (1601): 1. a wasting away; 2. a diminution in size of a cell, tissue, organ or part; phyes pl \\fē\z\ atrophic adj

atrophy və-trok\fē\ vb; comp, ADIPOSE ATROPHY, AGE ATROPHY, BONE ATROPHY, DISUSE ATROPHY, MUSCULAR ATROPHY, POST-MENOPAUSAL ATROPHY, SENILE ATROPHY

attached gingiva və-täk\d\ˈ jin\ja\-va\n: the portion of the gingiva that is firm, dense, stippled, and tightly bound to the underlying periosteum, bone, and tooth

attachment və-täk\ment\ n (15c): 1. a mechanical device for the fixation, retention, and stabilization of a prosthesis; 2. a retainer consisting of a metal receptacle and a closely fitting part; the former (matrix component) is usually contained within the normal or expanded contours of the crown of the abutment tooth and the
attachment apparatus: 'a-täch\'ment ap\-ə-rät\'us, -rät\'us; in periodontics, a general term used to designate the cementum, periodontal ligament and alveolar bone

attachment screw: any component used to secure a fixed dental prosthesis; comp, ABUTMENT SCREW

attenuation of radiation: 'a-tēn\'yo-ə shun ə-rā-de\-'a shun\; the reduction in intensity of radiation as a result of scattering and absorption of radiation; attenuation of electron beams always lowers the average beam energy

attrition: 'a-trish\'n\; n (14c): 1. the act of wearing or grinding down by friction; 2. the mechanical wear resulting from mastication or parafunction, limited to contacting surfaces of the teeth; comp ABRASION, EROSION, ABRFRACTION

atypical facial pain: 'a-tip\-tī-kul fa\'shul pān\; a painful syndrome characterized by dull aching or throbbing, rather than paroxysms of pain, such as seen in trigeminal, glossopharyngeal, or postherpetic neuralgia, occurring in areas supplied by various nerve groups, including the fifth and ninth cranial nerves and the second and third cervical nerves; however, the distribution of atypical facial pain does not follow the established pathways of innervation of the major sensory nerves (i.e., trigeminal neuralgia); attacks last from a few days to several months and often occur after dental care or sinus manipulation, but examination of the teeth, nose, sinuses, ears, and temporomandibular joints seldom reveals any abnormalities; a psychogenic or vascular etiology has been suggested; this is believed by some to not be a specific disease entity but rather a symptom, the etiology of which has not been determined; syn, atypical facial neuralgia, facial causalgia

audiogram: 'a-de\-ə-grām\; n (1927): a record of the thresholds of hearing of an individual over various sound frequencies

audiology: 'a-de\-ōl-a-jē\; n (1946): the study of the entire field of hearing, including the anatomy and function of the ear, impairment of hearing, and the education or reeducation of the person with hearing loss

audiometer: 'a-de\-əm\-tēr\; n (1879): an instrument used to assess hearing at various intensity levels and frequencies

audition: 'a-dish\'n\; n (1599): the power or sense of hearing

auditory discrimination: 'a-di-tôr\-ē, -tôr\-ē, -dī-skār\-m\-nə shun\; ability to discriminate between sounds of different frequency, intensity, and pressure pattern components; ability to distinguish one speech sound from another

augment: 'a-gəm\-mənt\; vb (15c): to make greater, more numerous, larger, or more intense

augmentation: 'a-gən\-mənt\-tā shun\; n (14c): to increase in size beyond the existing size. In alveolar ridge augmentation, bone grafts or alloplastic materials are used to increase the size of an atrophic alveolar ridge

auricle: the appendage of soft tissue and cartilage that is lateral to the external auditory meatus; the ear

auricular defect: 'a-rīk\-'ya-lar dē-fēkt, -dī-fēkt\; absence or partial absence of the external ear

auricular prosthesis: 'a-rīk\-'ya-lər prōs-thē-sīs\; a removable maxillofacial prosthesis that artificially restores part of or the entire natural ear; syn, artificial ear, ear prosthesis

auriculotemporal syndrome: 'a-rĭ-kō-tēm\-prāl sīn\-drōm\; sweating and flushing in the preauricular and temporal areas when certain foods are eaten

auscultation: 'a-skal\-tā shun\; n (ca. 1828): the process of determining the condition of various parts of the body by listening to the sounds they emit

autogenous: 'a-tōj\-'ya-nus\; adj (1846): originating or derived from sources within the same individual; self-produced; self-generated; autologous

autogenous graft: 'a-tōj\-'ya-nus grāf\; a graft taken from the patient’s own body; syn, AUTOGRAFT

autoglaze vb: the production of a glazed surface by raising the temperature of a ceramic material to create surface flow; comp, OVERGLAZE

autograft: 'a-ta-grāft\; n (ca. 1913): a graft of tissue derived from another site in or on the body of the organism receiving it; syn, autochthonous graft, AUTOGENOUS GRAFT, autologous graft, autoplast

autologous: 'a-tōl\-'ō-gūs\; adj (ca. 1921): related to self; designating products or components of the same individual organism; syn, AUTOGENOUS

autonomic nervous system: 'a-tō-nōm\-tik nūr\-vəs sist\-tām\; the part of the nervous system that innervates the cardiovascular, digestive, reproductive, and respiratory organs; it operates outside of consciousness and controls basic life-sustaining functions, such as heart rate, digestion, and breathing; it includes the sympathetic nervous system and the parasympathetic nervous system

autopolymer: 'a-tō-pōl\-ə-mēr\; n: a material that polymerizes by chemical reaction without external heat as a result of the addition of an activator and a catalyst

autopolymerization: 'a-tō-pōl\-a-mēr\-zā shun\; n: in resins, the chemical reaction of smaller molecular chain molecules with an activator to form a larger molecular chain; e.g., a tertiary amine activates the benzoyl peroxide, an initiator, which will react with the methylnethylacrylate monomer to form polymethylmethacrylate; syn, CHEMICALLY-ACTIVATED POLYMERIZATION, POLYMERIZATION

autopolymerizing resin: 'a-tō-pōl\-a-mēr\-i\-zing rēz\-n\; in resins formed when polymerization occurs as a result of a chemical activator

average axis facebow: av\-ər-i, av\-ər\-ē ə-kā sīs fās bō\'t\; a device used to relate the maxillary cast to the condylar elements of an articulator by using average anatomic landmarks to estimate the position of the transverse horizontal axis; comp, ARBITRARY FACEBOW, KINETIC FACEBOW

average axis facebow record: the registration of average anatomic landmarks to estimate the position of the transverse horizontal axis; syn, FACEBOW RECORD

average value articulator: av\-ər\-ē ə-vāl\-yō\ ār\-tī-kər\-yā\-lā \-tīr\; an articulator that is fabricated to permit motion based on mean mandibular movements; syn, Class III articulator

avulsion: 'a-vūl\-shun\; n (1622): a forcible separation or detachment, as in a tearing away of a body part surgically or accidentally

avulsion fracture: 'a-vūl\-shun frāk\-chər\; a tearing away or traumatic separation of a part of a bone

axial contour: the shape of a body that is in its long axis

axial inclination: av\-ək\-se\-əl līn kā nā shun\; 1. the relationship of the long axis of a body to a designated plane; 2. in dentistry, the alignment of the long axis of a tooth to a selected plane, often the horizontal plane
axial loading • bees’ wax

axial loading 'vāk’sē-al lō’dingː; the force down the long axis of the tooth, dental implant, or other object being described

axial reduction: the amount of tooth removal (alteration, preparation) along its long axis; comp, INCISAL REDUCTION, OCCLUSAL REDUCTION

axial surface: the exterior of a body that is oriented in its long axis

axial wall: 1. the side of a body that is in its long axis; 2. in dentistry, the surface of a tooth preparation that is in its long axis

axis 'vāk’sēzː n (14c): a line around which a body may rotate or about which a structure would turn if it could revolve: axes pl ‘vāk’sēzː; comp, CONDYLAR AXIS, SAGITTAL AXIS, TRANSVERSE HORIZONTAL AXIS, VERTICAL AXIS

axis of preparation ‘vāk’sēz væl-prép’-ə-ra’-shunː the planned line or path of placement and removal for a dental restoration

axis orbital plane ‘vāk’sēs ɔr’bī lā plānː the horizontal plane established by the transverse horizontal axis of the mandible with a point on the inferior border of the right or left bony orbit (orbitale); this plane can be used as a horizontal reference point

b

back pressure porosity ‘bāk prēsh’-ər pa-rō’sē-tēː; porosity produced in dental castings thought to be the result of the inability of gases in the mold to escape during the casting procedure; syn, OCCLUDED GAS POROSITY, SHRINK-SPOT POROSITY, SOLIDIFICATION POROSITY, SUCK-BACK POROSITY

backing ‘bāk’-ing n (1793): a metal support that attaches a veneer to a prosthesis

backscatter or backscattering n (1940): syn, SCATTERED RADIATION

balanced articulation ‘bāl anzd ār-tīk’-ya-lā’-shunː the bilateral, simultaneous occlusal contact of the anterior and posterior teeth in excursive movements; comp, CROSS-ARCH BALANCED ARTICATION, CROSS-TOOTH BALANCED ARTICATION

balanced bite slang: syn, BALANCED ARTICATION

balanced occlusal contact: syn, NONWORKING-SIDE OCCLUSAL CONTACT

balanced occlusion: syn, BALANCED ARTICATION

balancing condyle obs: syn, NONWORKING-SIDE CONDYLE

balancing contact: syn, NONWORKING-SIDE OCCLUSAL CONTACT

balancing interference ‘bāl’-ans ɪŋ ɪn-te-fər’-ənː obs: syn, MEDIOTRUSIVE OCCLUSAL CONTACT; NONWORKING-SIDE OCCLUSAL CONTACT

balancing occlusal contact: syn, NONWORKING-SIDE OCCLUSAL CONTACT

balancing occlusal surfaces ‘bāl’-ans ɪŋ ə klō’-zl ʃur’-fəs əsː the working-side occlusal contacts (anteroposteriorly or laterally); these contacts with reciprocating nonworking-side occlusal contacts are developed for the purpose of stabilizing dentures (GPT-4); syn, LATEROTRUSIVE OCCLUSAL CONTACT; comp, MEDIOTRUSIVE OCCLUSAL CONTACT

balancing side obs: syn, NONWORKING-SIDE

bar ‘bār, n (12c): a straight or curvilinear piece of metal that is longer than it is wide. It may have several uses including a lever, barrier, fastener, handle, or support. In prosthodontics, it serves to connect two or more parts of a removable partial denture or fixed partial denture; syn, BAR CONNECTOR

bar clasp ‘bār klāspː a clasp retainer whose body extends from a major connector or denture base, passing adjacent to the soft tissues and approaching the tooth from a gingivo-occlusal direction

bar clasp arm: syn, BAR CLASP

bar connector ‘bār ka-nēk’tōrː a metal component of greater length than width that serves to connect the parts of a removable complete denture, removable partial denture, or fixed dental prosthesis; comp, LABIAL BAR CONNECTOR, LINGUAL BAR CONNECTOR, MAJOR CONNECTOR, MESOSTRUCTURE, PALATAL BAR CONNECTOR, IMPLANT-SUPPORTED BAR CONNECTOR

bar retainer ‘bār ri-tā’-nēː obs: a metal bar usually resting on lingual surfaces of teeth to aid in their stabilization and to act as indirect retainer (GPT-4); syn, BAR CONNECTOR

basal ‘bāsəl, -zāl adj (1828): pertaining to or situated near the base

basal bone ‘bāsək bōnː: the osseous tissue of the mandible and maxillae exclusive of the alveolar process

basal seat obs: syn, DENTURE FOUNDATION AREA

basal surface obs: syn, DENTURE BASE

1base ‘bās vō (1587): the act of placing a lining material under a dental restoration

2base ‘bās n (14c): any substance placed under a restoration that blocks out undercuts in the preparation, acts as a thermal or chemical barrier to the pulp, and/or controls the thickness of the overlying restoration; syn, BASE MATERIAL; Editorial note for usage: adjectives such as insulating base or therapeutic base may also be used

3base ‘bās n (19c): the portion of a denture that supports the artificial dentition and replaces the deficient alveolar anatomy and gingival tissues; comp, DENTURE BASE

base material ‘bās mā-tīr’-ē-əlː obs: any substance of which a denture base may be made, such as acrylic resin, vulcanite, poly-styrene, or metal (GPT-4)

base metal ‘bās mēt’-tː: any metallic element that does not resist tarnish and corrosion; comp, HIGH NOBLE METAL ALLOY, NOBLE METAL ALLOY

base metal alloy ‘bās mēt’-l ə’lː an alloy composed of metals that are not noble; comp, HIGH NOBLE METAL ALLOY, NOBLE METAL ALLOY

baseplate ‘bās plātkː n: a rigid, relatively thin layer of wax, shellac, or thermoplastic (heat-, chemically-, or light-activated) polymer adapted over edentulous surfaces of a definitive cast to form a base which, together with an attached occlusion rim made of wax or similar material, serves as the record base; syn, RECORD BASE

baseplate wax ‘bās plāt wākː a hard wax used for making occlusion rims, waxing dentures, and other dental procedures

basket endosteal dental implant ‘bās’kīt ən’-dā-stēl’ ən’-dēn’t tə ɪm’-plāntː a perforated, cylindric, endosteal dental implant, the implant body of which is designed in the form of single, double, and/or triple contiguous cylinder(s)

bead-brush technique: a method of applying an auto polymerizing resin mix to a surface whereby a brush tip is first dipped in liquid monomer and then polymer powder forming a small bead that is incrementally applied to form the desired shape

beading ‘bē-dingː; n: creating an irregular surface by means of stipples, dots, speckles, or the like; bead vb ˈbē də.

beam ˈbe-em, n, obs: a term once used instead of bar with specific reference to the bar connector; comp, CANTILEVER, CONTINUOUS BEAM, simple beam (GPT-4)

bees’ wax ‘bēz wāksː n (1676): a low-melting wax obtained from honeycomb and used as an ingredient of many dental impression waxes
**Beilby layer** *eponym* for the molecular disorganized surface layer of a highly polished metal; a relatively scratch-free microcrystalline surface produced by a series of abrasives of decreasing coarseness; *orig*, Sir George Thomas Beilby, chemist, United Kingdom, 1850-1924

**Beilby GT.** Aggregation and flow of solids; London Macmillan and Co., 1921

**bench set**  
\[ベンチセット\]: 1. the time necessary for casting investment to crystallize; 2. a stage of resin processing that allows a chemical reaction to occur under the conditions present in the ambient environment; 3. to describe the continuing polymerization of impression materials beyond the manufacturer's stated set time

**Bennett angle**  
\[ベンッチ角\]: *eponym* for the angle formed between the sagittal plane and the average path of the advancing nonworking-side condyle as viewed in the horizontal plane during lateral mandibular movements (GPT-4); *orig*, Sir Norman Godfrey Bennett, dental surgeon, United Kingdom, 1870-1947

**Bennett movement** *orig*, Sir Norman Godfrey Bennett, dental surgeon, United Kingdom, 1870-1947; *syn*, LATEROTRUSION

Bennett NG. A contribution to the study of the movements of the mandible. Proc Roy Soc Med (Lond) 1908;1:79-98 (Odont Section)

**Bennett side shift** *orig*, Sir Norman Godfrey Bennett, dental surgeon, United Kingdom, 1870-1947; *syn*, MANDIBULAR LATERAL TRANSLATION

Bennett NG. A contribution to the study of the movements of the mandible. Proc Roy Soc Med (Lond) 1908;1:79-98 (Odont Section)

1. **bevel**  
\[べベル\]: a slanting edge

2. **bevel**  
\[べベル\]: vt; the process of slanting the finish line and curve of a tooth preparation

**beveled shoulder finish line**  
*bevel* shoulder finish line: a shoulder finish line with the cavo-surface angle modified with a bevel; *comp*, FINISH LINE

**Bezold-Brücke effect**: the apparent change in hue that accompanies a change in luminance; *orig*, Hermann Helmholtz, physician/physicist, Germany, 1867

**BID** *acronym* for B. Bis In D’è, twice a day

**bifurcation**  
\[岐枝\]: a condylar anomaly where an exaggerated central depression exists

**bifurcation**  
\[岐枝\]: 1. division into two branches; 2. the site where a single structure divides into two parts, as in two roots of a tooth

**bilaminar zone** *syn*, RETRODISCIAL TISSUE

**bilateral**  
\[二側\]: having or pertaining to two sides

**bilateral balanced articulation**: the bilateral, simultaneous posterior occlusal contact of teeth in maximal intercuspal position and eccentric positions; *syn*, BALANCED ARTICULATION

**bilateral distal-extension removable partial denture**  
\[二側延長可移装部分義歯\]: the distal most tooth or teeth on each side of one arch of the mouth; *syn*, Kennedy Class I RPD; *comp*, KENNEDY CLASSIFICATION OF REMOVABLE PARTIAL DENTURES

**bimanual manipulation technique**: a method for manipulation of the mandible by using both thumbs on the chin and the fingers on the inferior border of the mandible to guide the jaw into centric relation

**bimaxillary protrusion**  
\[二顎突出\]: a simultaneous dental or skeletal protrusion of both the maxillary and mandibular jaws and/or teeth

**biometer**  
\[二測\]: a gnathodynamometer equipped with a central bearing plate of adjustable height; *orig*, Ralph H. Boos, dentist, U.S.A.; *syn*, GNATHODYNAMOMETER

Boos RH. Intermaxillary relation established by biting power. J Am Dent Assoc 1940;27:1192

**bio-col technique**: the atraumatic extraction of a tooth and the multitude of techniques for the preservation of the residual ridge; *orig*, Anthony G. Sclar, oral and maxillofacial surgeon, Florida, U.S.A., 1999

**bioacceptability**  
\[ビオ・アクセプタビリティ\]: the quality of compatibility in a living environment in spite of adverse or unwanted side effects

**bioactivity** *n*: reactive potential of implant material that allows interaction and bond formation with living tissues; active potential depends on material composition, topography, and chemical or physical surface variations

**bioadhesion** *n*: a chemical reaction that results in attachment between biologic and other materials

**biocompatible**  
\[ビオ・コマーピレント\]: capable of existing in harmony with the surrounding biologic environment

**biofeedback**  
\[ビオフィードバック\]: 1. the process of furnishing an individual information, usually in an auditory or visual mode, on the state of one or more physiologic variables such as blood pressure, skin temperature, muscle tonus, or heart rate; this procedure often enables an individual to gain some voluntary control over the variable being sampled; 2. the instrumental process or technique of learning voluntary control over automatically regulated body functions

**biofunctional orthopedics** *syn*, FUNCTIONAL JAW ORTHOPEDICS

**biologic width**  
\[生物的範囲\] *composite* of the combined width of connective tissue and junctional epithelial attachment formed adjacent to a tooth and superior to the crestal bone. Gargiullo described a “physiologic dentogingival junction” that he identified as being composed of an epithelial attachment that averaged 0.97 mm and a supracrestal connective tissue attachment that averaged 1.07 mm, creating an average total dimension of 2.04 mm; *orig*, D. Walter Cohen, periodontist, U.S.A.

The term “biologic width” was originated by D. W. Cohen in a lecture at Walter Reed Army Medical Center, June 3, 1962

**biomaterial**  
\[バイオマテリアル\]: any substance other than a drug that can be used for any period of time as part of a system that treats, augments, or replaces any tissue, organ, or function of the body

**biomechanics**  
\[バイオ・マキニクス\]: the mathematical analysis of biologic data; 1. the application of mechanical laws to living structures, specifically the locomotor systems of the body; 2. the study of biology from the functional viewpoint; 3. an application of the principles of engineering design as implemented in living organisms; *syn*, DENTAL BIOMECHANICS

**biometry**  
\[バイオメトリーカ\]: the science of the application of statistical methods to biologic facts, as the mathematical analysis of biologic data

**biopsy**  
\[バイオプシーカ\]: the removal of tissue for histologic examination and diagnosis; *sies\[シーズ\]*, pl

**biostatistics**  
\[バイオ・スタティクス\]: the science of the application of statistical methods to biologic facts, as the mathematical analysis of biologic data; *comp*, BIOMETRY

**biphasic pin fixation**  
\[バイ・フォーサイド针接合\]: the use of external pin fixation in the treatment of bone fractures

**Bis-GMA** *acronym* for BISPHENOL-A GLYCIDYL DIMETHACRYLATE
Bisphenol-A glycidyl dimethacrylate • Bonwill triangle

Bisphenol-A glycidyl dimethacrylate: a high molecular weight resin constituent of most dental composite resins; orig, Rafael L. Bowen, inventor, U.S.A., 1959

biseque bake 'ils bisk bæk\ t\ a series of stages of maturation in the firing of ceramic materials relating to the degree of pyro chemical reaction and sintering shrinkage occurring before vitrification (glazing); syn, biscuit bake

bite ɪt\ t\ vb: the act of incising or crushing between the teeth;
Editorial note for usage: Because bite refers to incising, it would be slang if used to relate to occlusion or occlusion registration records

bite analysis slang: syn, OCCLUSAL ANALYSIS

bite block slang: syn, OCCLUSION RIM, RECORD RIM

bite closing slang: syn, DECREASED OCCLUSAL VERTICAL DIMENSION

bite guard slang: syn, OCCLUSAL DEVICE

bite opening slang: syn, OCCLUSAL VERTICAL DIMENSION

bite plane slang: syn, OCCLUSAL DEVICE

bite plate slang: syn, OCCLUSAL DEVICE

bite raising slang: syn, OCCLUSAL VERTICAL DIMENSION

bite registration slang: MAXILLOMANDIBULAR RELATIONSHIP RECORD

bite rim slang: syn, OCCLUSION RIM, RECORD RIM

bite splint slang: OCCLUSAL DEVICE

biting force: nonstand, OCCLUSAL FORCE

biting pressure: nonstand, OCCLUSAL FORCE

biting strength: nonstand, OCCLUSAL FORCE

bitmap: syn, RASTER GRAPHICS IMAGE

black triangle nonstand: syn, INTERDENTAL GINGIVAL SPACE

blade endosteal dental implant ɪbʌd ɛn-dɔs-ˈtɛəl dɛnˈtɪl ɪmˈplænt\ t\ a facioliangually narrowed, wedge-shaped dental implant body with openings or vents through which tissue may grow

blade implant: syn, BLADE ENDOSTEAL DENTAL IMPLANT

block-out ɪbʌk ˈou\ t\ 1. elimination of undesirable undercuts on a cast; 2. the process of applying wax or another similar temporary substance to undercut portions of a cast so as to leave only those undercuts essential to the planned construction of a prosthesis; a blocked out cast may also include other surface modifications needed relative to the construction of the prosthesis

blowout fracture ɪbʌˈəʊt ˈfrəʊtʃər\ slang: expression for a fracture of the orbital floor caused by a sudden increase in intraocular pressure due to traumatic force

board-certified prosthodontist ˈbɔrd-sɜrˈtɛd prɒsˈθa-dɔnˈtɪst\ t\ in the United States, as defined by the American Board of Prosthodontics, a prosthodontist who has passed the certifying examination administered by the American Board of Prosthodontics

board-eligible prosthodontist ˈbɔrd-ˈɛlɪtˈjɛl prɒsˈθa-dɔnˈtɪst\ t\ in the United States, as defined by the American Board of Prosthodontics, a prosthodontist whose application for examination for certification is current and has been accepted for examination by the American Board of Prosthodontics

body porcelain: a porcelain blend used for the bulk of a ceramic restoration; comp INCISAL PORCELAIN, GINGIVAL PORCELAIN, SHOULDOR PORCELAIN

boil out: syn, WAX ELIMINATION

Boley gauge: a caliper-type sliding gauge used for measuring thickness and linear dimension

bolus ˈbɒləs\ n (1562): a rounded mass, as a large pill or soft mass of chewed food

bond ˈbɔnd\ n (12c): 1. the linkage between two atoms or radicals of a chemical compound; 2. the force that holds two or more units of matter together; comp, SECONDARY BONDS, VAN DER WAALS BOND

bond strength ˈbɔnd streŋkθ, streŋˈθ\ the force required to break a bonded assembly with failure occurring in or near the adhesive/adherent interface

bonded bridge slang: syn, MARYLAND BRIDGE, RESIN-BONDED PROSTHESIS

bonding ˈbɒndɪŋ\ n (1955): 1. joining together securely with an adhesive substance such as cement or glue; 2. an adhesive technique in dentistry involving the acid etching of tooth enamel and/or dentin so as to create tags of resin within the tooth structure that results in mechanical retention of the restorative material; comp, ADHESION

bonding agent ˈbɔndɪŋ əˈʃɛnt\ t\ a material used to promote adhesion or cohesion between two different substances, or between a material and natural tooth structures; comp, ADHESIVE, ADHESIVE RESIN

bone ˈbɔn\ n (bef. 12c): the hard portion of the connective tissue that constitutes the majority of the skeleton; it consists of an inorganic or mineral component and an organic component (the matrix and cells); the matrix is composed of collagenous fibers and is impregnated with minerals, chiefly calcium phosphate (approx. 85%) and calcium carbonate (approx. 10%), thus imparting the quality of rigidity; syn, osseous tissue; comp ALVEOLAR BONE, BASAL BONE, CANCELLOUS BONE, COMPACT BONE, CORTICAL BONE

bone atrophy ˈbɔn æˈtroʊfɪ\ bone resorption noted internally by a decrease in density and externally by a reduction in dimension

bone augmentation: syn, AUGMENTATION

bone conduction ˈbɔn kənˈdʌŋkʃən\ the conduction of sound to the inner ear through the bones of the skull; syn, CRANIAL CONDUCTION, OSTEOCYTOPHONIC CONDUCTION, and TISSUE CONDUCTION

bone curettage ˈbɔn kərˈtɛt\ t\ the surgical shaving or smoothing of the bone's external surface

bone expansion ˈbɔn ekˈspænʃən\ manipulation of a bony ridge by placement of an osteotome to split the cortical ridge and hence enhance bone width

bone factor ˈbɔn ˈfæktər\ relative response of alveolar bone to stimulation or irritation; the ratio of osteogenesis to osteolysis

bone graft: in prosthodontics, the augmentation or replacement of the portion of the maxillary or mandibular bone with an osteogenic material

bone marrow ˈbɔn mɑrˈɑʊ\ the soft vascular tissue that fills bone cavities and cancellous bone spaces, which consists primarily of fat cells, hematopoietic cells, and osteogenetic reticular cells

bone sounding: a procedure to determine the location of underlying bone by inserting a needle or sharp caliper through the anesthetized tissues until it contacts the bone

Bonwill triangle ˈbɒnˌwɪl ˈtriːnɡɡəl ˈeɪpənɔm\ for a 4-inch equilateral triangle bounded by lines connecting the contact points of the mandibular central incisor's incisal edge (or the midline of the mandibular residual ridge) to each condyle (usually its midpoint) and from one condyle to the other; orig, William Gibson Arlington Bonwill, dentist, U.S.A., 1833-1899; first used by Bonwill in 1858 while introducing his Anatomical Articulator
Bonwill WGA. Scientific articulation of the human teeth as founded on geometrical, mathematical and mechanical laws. Dent Items Int 1899;21:617-56, 873-80

bony ankylosis \bô’nē ˈæŋ-ˈka-ˌlō sīs\: the bony union of the components of a joint resulting in complete immobility

boolean adj as related to literature database searches, a computer binary logic that can recognize a search relationship of word associations; \orig, George Boole, mathematician, Ireland, 1815-1864

border \bôrˈdər\ n (14c): the circumferential margin, edge or surface; a bounding line, edge, or surface; \comp, DENTURE BORDER

border molding \bôrˈdər môldˈing\: 1. the shaping of impression material along the border areas of an impression tray by functional or manual manipulation of the soft tissue adjacent to the borders to duplicate the contour and size of the vestibule; 2. determining the extension of a prosthesis by using tissue function or manual manipulation of the tissues to shape the border areas of an impression material

border movement \bôrˈdər mōˈvənt\: mandibular movement at the limits dictated by anatomic structures, as viewed in a given plane

border position: \syn, POSTERIOR BORDER MOVEMENT

border seal \bôrˈdər sèl\: the contact of the denture border with the underlying or adjacent tissues to prevent the passage of air or other substances

border tissue movements \bôrˈdər tishˈōō\: the action of the muscles and other tissues adjacent to the borders of a denture

boxing an impression \bôkˈsing ən-imˈprēshən\: the enclosure (box) of an impression to produce the desired size and form of the base of the cast and to preserve desired details

boxing wax \bôkˈsing wäks\: wax used for boxing an impression

bracing \braˈsing\: adj the resistance to horizontal components of masticatory force

bracing arm \no-nstənd\: \syn, RECIPROCAL CLASP

bracket \braitˈık\: n: an orthodontic device attached to an individual tooth to hold arch wires

braze \braitˈız\ vt (1677): to join with a nonferrous alloy that melts at a lower temperature than that of the metals being joined; \syn, SOLDER

brazing investment \braitˈzing in-ˈvōstəment\: an investment having a binding system consisting of acidic phosphate, such as monoammonium phosphate, and a basic oxide, such as magnesium oxide

brazing material \braitˈzing maˈtir-ə-a\: an alloy suitable for use as a filler material in operations with which dental alloy(s) is/are joined to form a dental restoration

breakdown potential \braitˈdoun paˈtén-suhl\: the last noble potential where pitting and/or crevice corrosion will initiate and propagate

bridge \n, slang: \syn, FIXED PARTIAL DENTURE

bridgework slang: \syn, FIXED DENTAL PROSTHESIS, FIXED PARTIAL DENTURE

brittle \britl\: 1. easily broken or shattered; fragile or crisp; 2. prone to fracture or failure; the fracture that occurs when the proportional limit of a material is exceeded

Broadrick occlusal plane analyzer: \eponym for a flag-like component attached superiorly to the upper member of an articulator; the technique incorporates Monson's spherical theory of occlusion to develop the occlusal plane; a compass is used to scribe two intersecting arcs with a four-inch radius; centers of rotation are located at the canine tip and the distobuccal cusp tip of the second molar; the point of bisection of the arcs that are scribed on the Broadrick analyzer determines the center of rotation for the arc with a four inch radius that determines the occlusal plane

bruxism \bruksˈsiz əm\: n (ca. 1940): 1. the parafunctional grinding of teeth; 2. an oral habit consisting of involuntary rhythmic or spasmodic nonfunctional gnashing, grinding, or clenching of teeth, in other than chewing movements of the mandible, which may lead to occlusal trauma; \comp, nocturnal bruxism, occlusal neurosis, tooth grinding

bruxomania \bruksˌ-o-māˈnē-ə,-ˌmān yaˈ vəb\: the grading of teeth occurring as a neurotic habit during the waking state (GPT-4); \syn, BRUXISM

buccal \bukˈəl\ adj (ca. 1771): pertaining to or adjacent to the cheek

buccal flange \bukˈəl ˈflän\: the portion of the flange of a denture that occupies the buccal vestibule of the mouth

buccal vestibule \bukˈəl vēˈsi-byōō\: the portion of the oral cavity that is bounded on one side by the teeth, gingiva, and alveolar ridge (in the edentulous mouth, the residual ridge) and on the lateral side by the cheek posterior to the buccal frenula

bucco-occlusal contrabavel: a tooth preparation feature that follows the buccal cusp ridge contour of a partial-veneer preparation, connecting the mesial and distal boxes or grooves

buccolingual relationship \bukˈəl ˈling ɡwəl rəˈli ˌshun ˈship\: any position of reference relative to the tongue and cheeks

buccoversion \bukˈəvərˌshun\: n; a deviation toward the cheek

bulb \bulp\ n, slang: \syn, OBTURATOR, SPEECH AID PROSTHESIS

bulimia n: an eating disorder typified by binge eating and self-induced vomiting or laxative use; this life-threatening disorder can result in severe dental erosion, which may be the first sign of the disorder

BULL: \acronym for Buccal of the Upper, Lingual of the Lower (cusps); applies to Clyde H. Schuyler’s rules for occlusal adjustment of a normally related dentition in which those cusps contacting in maximal intercuspal position (mandibular buccal and maxillary lingual) are favored by adjustment of those cusps that are not in occlusal contact in maximal intercuspal position (maxillary buccal and mandibular lingual); \syn, bull rule

bur \bər\ n (14c): a steel or tungsten carbide rotary cutting instrument

bur head \bər ˈhēd\ n (2005): the cutting portion of a dental bur

bur head length \bər ˈhēd ˈlēŋkθ, ˈlēŋth\ (2005): the axial dimension of the bur head

bur head shape \bər ˈhēd ˈshāp\ (2005): the geometrical outline form of the cutting surface edges, usually described successively by proximity from the shank to the tip end

bur shank \bər ˈshāŋk\ n (2005): that component of a dental bur that fits into the hand piece; the shaft section of the dental bur that may be friction gripping or latch-type in form

burn out \bərn ˈaut\ n; \syn, WAX ELIMINATION

burnish \bərnˈi ʃə vt (14c): to make shiny or lustrous by rubbing; also to facilitate marginal adaptation of restorations by rubbing the margin with an instrument

burnishability \bərnˈi şə bəl-ˈte \ n; the ease with which a material can be burnished

butt \bət\ vb (14c) obs to bring any two flat-ended surfaces into contact without overlapping, as in a butt joint; \comp, SHOULDER FINISH LINE
buttom margin • case series

buttom margin nonstand: syn, PORCELAIN MARGIN

button implant obs: syn, MUCOSAL INSERT

C

Ca: abbr for Carcinoma or Cancer

CAD-CAM: acronym for COMPUTER-AIDED DESIGN-COMPUTER-AIDED MANUFACTURING (or Computer-Assisted Machining): the Computer Numerical Control (CNC) subtractive fabrication of a 3D object; in dentistry, it is a CAD-CAM technology used to produce different types of prostheses, including crowns, veneers, inlays, onlays, fixed dental prostheses, removable dental prostheses, dental implant prostheses, and orthodontic and other devices; comp, STEREOLITHOGRAPHY
calcium hydroxide \v'kal-së-um hì-dròk'sid\: an odorless white powder that is slightly soluble in water and insoluble in alcohol; aqueous and non-aqueous suspensions of calcium hydroxide are often used as cavity liners to protect the dental pulp from the irritant action of restorative materials and as an antibacterial agent (Bystrom,1985); also it has regenerative effects in pulp capping, and orthodontic and other devices

calcium sulfate \v'kal-së-um süt'fät\: a product obtained by calcination of gypsum under steam pressure, the alpha form is composed of regularly shaped grains, with low porosity, and requiring little water for a satisfactory mix; forms include alpha, alpha-modified, and beta
calculus n: in dentistry, a chalky or dark deposit attached to tooth structure, essentially made of mineralized microbial plaque; found on tooth structure in a supragingival and/or a subgingival location
CAMBRA (2003): acronym for caries management by risk assessment; guidelines for evidence-based caries management by using risk assessment protocols for diagnosis, treatment, and prevention
cameo surface \v'käm-e-ö súr'fäs\: the viewable portion of a removable denture prosthesis; the portion of the surface of a denture that extends in an occlusal direction from the border of the denture and includes the facial, lingual, and palatal surface; it is the part of the denture base that is usually polished, and includes the buccal and lingual surfaces of the teeth (GPT-7); syn, DENTURE POLISHED SURFACE, POLISHED DENTURE SURFACE
Camper’s line: syn, ALA-TRAGUS LINE

Camper’s plane \v'käm-perz plan\: 1. a plane established by the inferior border of the ala of the nose (or the average between the two) and the superior border of the tragus of each ear; 2. a plane passing from the acanthion to the center of each bony external auditory meatus; also called acanthion-external auditory meatus plane; syn, ALA-TRAGUS LINE

camphoroquinone n: a visible-light-sensitive chemical responsible for initiating free-radical polymerization

cancellous bone \v'kän-sål us, kän-se-lus bön\ (1836): the reticular, spongy or lattice-like portion of the bone; the spongy bone tissue located in the medulla of the bone; this bone is composed of a variable trabecular network containing interstitial tissue that may be hematopoietic
candle \v'kândl\: n (12c): a unit of luminous intensity, equal to 1/60 of the luminous intensity of a square centimeter of a black body heated to the temperature of the solidification of platinum (1773°C)
candle power \v'kändl pou-ërn\: luminous intensity expressed in candles
canine eminence \v'kän-im' èm'i-nants\: the labial prominence on the maxillary alveolar process corresponding to the position of the root of the canine tooth
canine guidance: syn, CANINE PROTECTED ARTICULATION
canine protected articulation \v'kän-t'ë-ver fiëst dëntl prôs-the' sís\: a fixed or complete or partial denture in which the pontic is cantilevered and retained and supported by one or more abutments
cap splint \v'kap splînt\: a plastic or metallic device used in the treatment of maxillary or mandibular fractures and designed to cover the clinical crowns of the teeth and usually luted to them
capillary attraction \v'kap-a-lér-e a-trâk'shun\: that quality or state which, because of surface tension, causes elevation or depression of the surface of a liquid that is in contact with the solid walls of a vessel
capsular \v'kap su-lër adj (ca. 1730): pertaining to a capsule
capsular contracture: syn, CAPSULAR FIBROSIS
capsular fibrosis \v'kap su-lër fi-brô'sís\: fibrotic contracture of the capsular ligament of the temporomandibular joint
capsular ligament \v'kap su-lër fi-ga'-ment\: as it relates to the temporomandibular joint, a fibrous structure that separately encases the superior and inferior synovial cavities of the temporomandibular articulation; a fibrous structure that surrounds the temporomandibular joint, attaching to the temporal bone, the articular disc, and the neck of the condyle of the mandible

capsule \v'kap sal-sôö\: n (1693): a fibrous sac or ligament that encloses a joint and limits its motion. It is lined with synovial membrane
capsulitis \v'kap sal-li-tis\: the inflammation of a capsule, as that of the joint, lens, liver, or labyrinth
carat \v'karət\: n (15c): a standard of gold fineness; the percentage of gold in an alloy, stated in parts per 24; pure gold is designated 24 carat
carbows: a rotary cutting instrument made from tungsten carbide
carbon fiber: filaments made by high temperature carbonizing of acrylic fiber; used in the production of high strength composite materials
caries n, singular: a dental disease causing the destruction of enamel, dentin, and/or cementum; the etiology is generally ascribed to acid-producing bacteria
cartilage \v'kar l-ë-i\: n (15c): a derivative of connective tissue arising from the mesenchyme; typically, hyaline cartilage is a flexible, rather elastic material with a semitransparent glass-like appearance; its ground substance is a complex protein through which there is distributed a large network of connective tissue fibers
case \v'kæs\: n, nonstand, chiefly dialect (13c): 1. the dental patient; 2. a particular instance of a disease, as a case of diphtheria; sometimes used incorrectly to designate the patient with the disease process
case history nonstand: syn, PATIENT HISTORY
case series nonstand: syn, PATIENT SERIES
case study nonstandard: syn, PATIENT STUDY

1. cast \vāst\ vb (13c): to produce a desired form by pouring or injecting a molten liquid or plastic material into a mold
2. cast \vāst\ n (14c): a-life likeness of some desired form; it is formed from a material poured into a matrix or impression or from a CAM printed replica; comp, DENTAL CAST, DIAGNOSTIC CAST, FINAL CAST, PRELIMINARY CAST, REFRACtORY CAST, REMOuNt CAST

cast clasp: a removable partial denture clasp fabricated by the lost-wax casting process

cast connector: a cast metal union between the retainer(s) and/or between retainers and pontic(s) in a fixed partial denture

cast metal core: the foundation restoration made of a metal alloy for a fixed dental prosthesis that is laboratory fabricated by lost-wax casting

cast post-and-core: a one-piece foundation restoration for an endodontically treated tooth that comprises a post within the root canal and a core replacing missing coronal structure to form the tooth preparation

cast relator \vāst rī-lāˈtər\: a mechanical device that orient castings to each other without reference to anatomic landmarks; comp, ARTICulator

castable \vāst aˈbl\ adj (1998): any flowable material that can be solidified after it is poured or injected into a refractory mold

castable ceramic \vāst aˈbl se-rāmˈi:k\: for dental applications, a glass-ceramic material that combines the properties of a restorative material for function with the capability to be cast using the lost-wax process

1. casting \vāstˈiŋ\, n (14c): something that has been cast in a mold; an object formed by the solidification of a fluid that has been cast into a refractory mold
2. casting \vāstˈiŋ\, vt: the action of pouring or injecting a flowable material into a refractory mold; comp, VACUUM CASTING

casting flask \vāstˈiŋ flāsk\: syn, CASTING RING

casting ring \vāstˈiŋ rīŋ\: a metal or silicone tube in which a refractory mold is made for casting dental restorations

casting wax \vāstˈiŋ wāk\: a composition containing various waxes with desired properties for making wax patterns to be formed into metal castings

CAT: acronym for Computerized Axial Tomography; comp, COMPUTERIZED TOMOGRAPHY

catalyst \vāstˈi-st\ n (1902): a substance that accelerates a chemical reaction without affecting the properties of the materials involved

cathode \vāthˈod\ n (1834): the negative pole in electrolysis

cautery \kōˈte-rē\ n (15c): the application of a caustic substance, hot instrument, electric current, or other agent used to burn, scar, or destroy tissue; -teries \ˈter-ri-ēz\, pl

cavity varnish \kāˈvārˌi-nə\: a combination of copal resin or other synthetic resins dissolved in an organic solvent such as chloroform or ether

cavosurface angle: the angle formed by the junction of prepared and unprepared tooth surface

CBCT: acronym for CONE BEAM COMPUTED TOMOGRAPHY

cD: acronym for COMPLETE DENTURE

CDA: acronym for Certified Dental Assistant

CDL: acronym for CERTIFIED DENTAL LABORATORY

CDT: acronym for CERTIFIED DENTAL TECHNICIAN

cellulitis \sĕlˈi-lĭ-tēs\ n (1861): diffuse and especially subcutaneous inflammation of connective tissue

cellulose acetate: an ester of acetic acid; used as clear prefabricated crown forms for making interim restorations

1. cement \sĕnˈmĕnt\ n (14c): 1. a binding agent used to firmly unite two approximating objects; 2. a material that, on hardening, will fill a space or bind adjacent objects; comp, LUTING AGENT, ADHESIVE RESIN

2. cement \sĕnˈmĕnt\, vt (15c): to unite or make firm by or as if by cement; to lute

cementation \sĕnˈmĕn-tāˈshən\: 1. the process of attaching parts by means of cement; 2. attaching a restoration to natural teeth by means of a cement (GPT-4)

cemented pin \sĕnˈmĕn-tid\: a small metal rod luted into a hole drilled into dentin to enhance retention

cemento-dental junction \sĕnˈmĕn-tō dēˈnəl jüngkˈshən\: the area of union of the dentin and cementum

cemento-enamel junction \sĕnˈmĕn-tō iˈnəməl jüngkˈshən\: that area where the enamel and cementum meet at the cervical region of a tooth

cementoid \sĕnˈmĕn-to̱d\: n: the uncalcified surface layer of cementum including incorporated connective tissue fibers

cementum \sĕnˈmĕn-təm\ n (1842): the thin calcified tissue of ectomesenchymal origin that covers the root of a tooth

cementum fracture \sĕnˈmĕn-frakˈchər\: the tearing of fragments of the cementum from the tooth root

center of the ridge \sĕnˈtər ət ˈri-dʒ\: the faciolingual or buccolingual midline of the residual ridge

center of rotation: syn, ROTATION CENTER

central bearing \sĕnˈtrəl bərˈing\: obs the application of forces between the maxillae and mandible (by means of a central bearing tracing device) at a single point that is located as near as possible to the center of the supporting areas of the maxillary and mandibular jaws; it is used for the purpose of distributing closing forces evenly throughout the areas of the supporting structures during the registration and recording of maxillomandibular relations and during the correction of occlusal errors (GPT-4)

central bearing point \sĕnˈtrəl bərˈing pōnt\: obs the contact point of a central bearing device (GPT-4)

central bearing tracing \sĕnˈtrəl bərˈing trāsˈing\: the pattern obtained on the horizontal plate used with a central bearing tracing device

central bearing tracing device \sĕnˈtrəl bərˈing trāsˈing dīˈvis\: a device that provides a central point of bearing or support between the maxillary and mandibular dental arches; it consists of a contacting point that is attached to one dental arch and a plate attached to the opposing dental arch; the plate provides the surface on which the bearing point rests or moves and on which the tracing of the mandibular movement is recorded; it may be used to distribute occlusal forces evenly during the recording of maxillomandibular relationships and/or for the correction of disharmonious occlusal contacts; orig, Alfred Gysi, prosthodontist, Switzerland, 1910; Editorial note for usage: EXTRAORAL TRACER (ING), INTRAORAL TRACER (ING), and TRACING DEVICE are the primary terms; comp, ARROW POINT TRACER, CEPHALOMETRIC TRACER, COBLE BALANCER, EXTRAORAL TRACER, GOTHIC ARCH TRACER, INTRAORAL TRACING, MANDIBULAR TRACER, NEEDLE POINT TRACING, PANTOGRAPHIC TRACING, STYLIUS TRACING, TRACING DEVICE

centric check bite slang: syn, CENTRIC RELATION RECORD

centric interocclusal record: syn, CENTRIC RELATION RECORD

centric jaw record: syn, CENTRIC RELATION RECORD

cellulose acetate: an ester of acetic acid; used as clear prefabricated crown forms for making interim restorations

cement \sĕnˈmĕnt\ n (14c): 1. a binding agent used to firmly unite two approximating objects; 2. a material that, on hardening, will fill a space or bind adjacent objects; comp, LUTING AGENT, ADHESIVE RESIN

cemented pin \sĕnˈmĕn-tid\: a small metal rod luted into a hole drilled into dentin to enhance retention

cemento-dental junction \sĕnˈmĕn-tō dēˈnəl jüngkˈshən\: the area of union of the dentin and cementum

cemento-enamel junction \sĕnˈmĕn-tō iˈnəməl jüngkˈshən\: that area where the enamel and cementum meet at the cervical region of a tooth

cementoid \sĕnˈmĕn-to̱d\: n: the uncalcified surface layer of cementum including incorporated connective tissue fibers

cementum \sĕnˈmĕn-təm\ n (1842): the thin calcified tissue of ectomesenchymal origin that covers the root of a tooth

cementum fracture \sĕnˈmĕn-frakˈchər\: the tearing of fragments of the cementum from the tooth root

center of the ridge \sĕnˈtər ət ˈri-dʒ\: the faciolingual or buccolingual midline of the residual ridge

center of rotation: syn, ROTATION CENTER

central bearing \sĕnˈtrəl bərˈing\: obs the application of forces between the maxillae and mandible (by means of a central bearing tracing device) at a single point that is located as near as possible to the center of the supporting areas of the maxillary and mandibular jaws; it is used for the purpose of distributing closing forces evenly throughout the areas of the supporting structures during the registration and recording of maxillomandibular relations and during the correction of occlusal errors (GPT-4)

central bearing point \sĕnˈtrəl bərˈing pōnt\: obs the contact point of a central bearing device (GPT-4)

central bearing tracing \sĕnˈtrəl bərˈing trāsˈing\: the pattern obtained on the horizontal plate used with a central bearing tracing device

central bearing tracing device \sĕnˈtrəl bərˈing trāsˈing dīˈvis\: a device that provides a central point of bearing or support between the maxillary and mandibular dental arches; it consists of a contacting point that is attached to one dental arch and a plate attached to the opposing dental arch; the plate provides the surface on which the bearing point rests or moves and on which the tracing of the mandibular movement is recorded; it may be used to distribute occlusal forces evenly during the recording of maxillomandibular relationships and/or for the correction of disharmonious occlusal contacts; orig, Alfred Gysi, prosthodontist, Switzerland, 1910; Editorial note for usage: EXTRAORAL TRACER (ING), INTRAORAL TRACER (ING), and TRACING DEVICE are the primary terms; comp, ARROW POINT TRACER, CEPHALOMETRIC TRACER, COBLE BALANCER, EXTRAORAL TRACER, GOTHIC ARCH TRACER, INTRAORAL TRACING, MANDIBULAR TRACER, NEEDLE POINT TRACING, PANTOGRAPHIC TRACING, STYLIUS TRACING, TRACING DEVICE

centric check bite slang: syn, CENTRIC RELATION RECORD

centric interocclusal record: syn, CENTRIC RELATION RECORD

centric jaw record: syn, CENTRIC RELATION RECORD

THE JOURNAL OF PROSTHETIC DENTISTRY
centric jaw relation • chemically-activated polymerization

centric jaw relation: syn, CENTRIC RELATION

centric occlusion /sɛn trik aˈkoʊliəˈzen/. The occlusion of opposing teeth when the mandible is in centric relation; this may or may not coincide with the maximal intercuspial position; comp, MAXIMAL INTERCUSPAL POSITION

centric position /sɛn trik pəˈzikən/. obs: the position of the mandible when the jaws are in centric relation (GPT-1)

centric record: syn, CENTRIC RELATION RECORD

centric relation /sɛn trik riˈlæ ʃun/. acryonym is CR; a maxillomandibular relationship, independent of tooth contact, in which the condyles articulate in the anterior-superior position against the posterior slopes of the articular eminences; in this position, the mandible is restricted to a purely rotary movement; from this unstrained, physiologic, maxillomandibular relationship, the patient can make vertical, lateral or protrusive movements; it is a clinically useful, repeatable reference position

centric relation interocclusal record: syn, CENTRIC RELATION RECORD; comp, JAW RELATION RECORD

centric relation occlusion: syn, CENTRIC OCCLUSION

centric relation position: syn, CENTRIC RELATION

centric relation record /sɛn trik riˈlæ ʃun riˈkɔrd/. a registration of the relationship of the maxillae to the mandible when the mandible is in centric relation. The registration may be obtained either intraorally or extraorally

centric slide /sɛn trik slɪd/. obs: the movement of the mandible while in centric relation, from the initial occlusal contact into maximal intercuspal position (GPT-4)

centric stop /sɛn trik sˈtɒp/. opposing cuspal/fossial contacts that maintain the occlusal vertical dimension between the opposing arches

cephalogram /ˈsiːfələˈɡrɑm/. syn, CEPHALOMETRIC RADIOGRAPH

cephalometer /ˈsiːfələˈmɔːtər/. n: an instrument used to position the head or skull; an orienting device for positioning the head for radiographic examination and measurement

cephalometric radiograph /ˈsiːfələˈmɛtrɪk rəˈdiːərˈɡrɑf/. a standardized radiograph of the skull

cephalometric tracing /ˈsiːfələˈmɛtrɪk træˈsing/. a line drawing of structural outlines of craniofacial landmarks and facial bones, made directly from a cephalometric radiograph

cephalometry /ˈsiːfələˈməti/. the science of measurement of the dimensions of the head; 2. in dentistry, certain combinations of angular and linear measurements developed from tracing frontal and lateral radiographic head films used to assess craniofacial growth and development on a longitudinal basis and to determine the nature of orthodontic treatment response; cephalometric /ˈsiːfələˈmɛtrɪk/ adj

cephalostat /ˈsiːfələˈstæt/. n: an instrument used to position the head to produce spatially oriented, reproducible radiographs or photographs

ceram /ˈsɛrəm/. vb: to apply a heat treatment process that converts a specially formulated glass into a fine-grained glass-ceramic material

1 ceram /ˈsɛrəm ˈɪk/. adj (1850): of or relating to the manufacture of any product made essentially from minerals by firing at a high temperature

2 ceram /ˈsɛrəm/. n (1859): syn, CERAMICS

ceramic crown /ˈsɛrəm kɹʌrn/. a ceramic fixed dental prosthesis that restores a clinical crown without a supporting metal framework

ceramic flux /ˈsɛrəm fʌks/. a glass modifier; metallic ions, such as calcium, potassium, or sodium, usually as carbonates, which interrupt the oxygen/silica bond, thus enhancing fluidity

ceramic inlay: a ceramic intracoronal restoration

ceramics /ˈsɛrəmiks/. n (1859): 1. compounds of one or more metals with a nonmetallic element, usually oxygen; they are formed of chemical and biochemically stable substances that are strong, hard, brittle, and inert nonconductors of thermal and electrical energy; 2. the art of making porcelain dental restorations; syn, ceramic restorations

ceramist /ˈsɛrəmɪst/ or ceramicist /ˈsɛrəmɪst/ n (1855): one who has proficiency in ceramics

ceramometal restoration: syn, METAL-CERAMIC RESTORATION

cermet /ˈsɜːr mɛt/ (1998): fused glass powder with silver particles formed through high temperature sintering of a mixture of the two minerals

Certified Dental Laboratory: acryonym is CDL; in the United States, a dental laboratory that has met established specific standards for personnel skills, laboratory facilities, and infection control and is certified by the National Board for Certification of Dental Laboratories

Certified Dental Technician: acryonym is CDT; in the United States, a dental technician who has met established specific standards and is certified by the National Board for Certification of Dental Laboratories

cervical /sɜːrˈvɪk(ə)l/. adj (1681): 1. in anatomy, pertaining to the cervix or neck; 2. in dentistry, pertaining to the region at or near the cemento-enamel junction

cervix /sɜːrˈvɪks/. n (15c): 1. the neck; 2. a constricted portion of a part or organ; cervices /sɜːrˈvɪsɪs/. pl

1 chamfer /ˈʃæmər/ n: 1. a finish line design for tooth preparation in which the gingival aspect meets the external axial surface at an obtuse angle; 2. a small groove or furrow; 3. the surface found by cutting away the angle of intersection of two faces of a piece of metal; a beveled edge; chamfers /ˈʃæmər/ pl

2 chamfer /ˈʃæmər/ vb: 1. to prepare a furrow in; 2. to make a chamfer on; to prepare or reduce to a chamfer; bevel; 3. generally thought of as producing a curve from the axial wall to the cavo-surface; chamfered; chamfering vt

chamfer angle /ˈʃæmər ˈæŋ ɡeɪl/. n: the angle between a chamfered surface and one of the original surfaces from which the chamfer is prepared; syn, CAVO-SURFACE ANGLE

characterization /ˈkærəˌtɪzəʃən/. the application of unique markings, indentations, coloration, and similar custom means of delineation on a tooth or dental prosthesis, thus enhancing natural appearance

characterize /ˈkærəˌtɪz/ vt: to distinguish, individualize, mark, qualify, singularize, or differentiate something

characterized denture base /ˈkærəˌtɪzd dɛn tʃɜr bæs/. a denture base with coloring that simulates the color and shading of natural oral tissues; syn, TINTED DENTURE BASE; comp, DENTOGENICS

check bite /ˈtʃek bɪt/. n: syn, INTEROCCLUSAL RECORD

cheilitis /ˈkɛliːtɪs/. inflammation of the lip in the area of the modiolus

cheioplasty: plastic surgery of the lip

cheilorrhaphy: surgical correction of the cleft lip deformity

cheiloschisis (1927): congenital cleft lip

cheilosis /ˈkɛliːsɪs/. a fissured condition of the lips and angles of the mouth; often associated with riboflavin deficiency

chemically-activated polymerization: a chemical reaction in which a tertiary amine activates an initiator, such as benzoyl peroxide, which will react with the methylmethacrylate monomer to form polymethylmethacrylate; syn, AUTOPOLYMERIZATION
chew-in record nonstand: syn, FUNCTIONALLY GENERATED PATH, STEREORECORGRAPHIC RECORD
chewing cycle: syn, MASTICATORY CYCLE
chewing force: syn, MASTICATORY FORCE
Christensen phenomenon Krís’chen-senz fi-nōm’-a-nōn’, -nen’s: eponym for the space that occurs between opposing posterior occlusal surfaces during mandibular protrusion; orig. Carl Christensen, dentist/professor, Denmark; Christensen C. The problem of the bite. D Cosmos 1905;47:1184-95
chroma .krə-mə\ n (1889): 1. the purity of a color, or its departure from white or gray; 2. the intensity of a distinctive hue; saturation of a hue; 3. chroma describes the strength or saturation of the hue (color); comp, SATURATION
Munsell AH. A color notation. Baltimore, MD: Munsell Color Co.; 1975:14-17
chromatic stimulus krō-māt’ik stīm’-ya-lus’: a stimulus that under prevailing conditions of adaptation gives rise to a perceived chromatic color
chromaticity coordinates krō’ma-tis’-i-te kō-ɔr’ di-nits’z: the two dimensions of any color order system that exclude the lightness dimension and describe the chromaticity. Unless otherwise specified, the term refers to the CIE coordinates x, y, and z for Illuminant C and 2 degrees (1931) Standard Observer; syn, color coordinates
chromaticity diagram krō’ma-tis’-i-te di’-a-gram’: a plane diagram in which each point represents a different combination of dominant wavelength and purity and which is usually constructed in some form of a triangle with colorimetric primaries represented at the corners; the CIE standard chromaticity diagram is essentially a right-angle triangle representing hypothetical primaries and the complete chromaticity gamut of the CIE standard observer
chromatonic krō’mā-tik-nēs’: n the intensity of hue as expressed in the Natural Color System
chromatopsia krō’ma-tōp’-zha-nē: n an abnormal state of vision in which colorless objects appear colored; a visual defect in which colored objects appear unnaturally colored and colorless objects appear color tinged
chronic krōn’ik adj (1601): marked by long duration or frequent recurrence; not acute; always present; chronically adj, chronicity n
chronic closed lock krōn’ik klōzd lōk’ with respect to the temporomandibular joint, a restriction in motion of the joint caused by an anteriorly displaced intra-articular disc and usually characterized by pain, especially during function
chronic pain krōn’ik pān’: pain marked by long duration or frequent recurrence
CIE: acronym for Commission Internationale d’Eclairage
CIELab system \v C I E Lāb sē’-sīm’; CIE LAB relates the tristimulus values to a color space; this scale accounts for the illuminant and the observer; by establishing a uniform color scale, color measurements can be compared and movements in color space defined
CIE standard illuminant \v C I E sūn’-dār lā’-ō-ma-nēn’ts: the illuminants A, B, C, D65 and other illuminants, defined by the CIE in terms of relative spectral power distributions; A = Planckion radiation (a theoretical body that absorbs all incident optical radiant energy) a temperature of about 2856° K; B = direct solar radiation, 48,000° K; C = average daylight; D65 = daylight, including the ultraviolet region, 6500° K
cinerefluorescency sīn’s e’-fō rāh skā ko pei’; n: dynamic fluorescent images recorded as a movie file
cineradiography sīn’-a-rā’-de-ō-grā’-fē’; n: the making of a movie file of successive radiographs with contrast medium in a fluorescent image appearing on a monitor
cingulum \sīn’-g’yā-lum’; n (1845): the lingual convexity of many anterior teeth; a convex protrubenance at the lingual cervical one third of the anterior tooth’s anatomical crown; cingula pl
cingulum rest sīn’-g’yā-lum reś’ts: a portion of a removable partial denture that contacts the prepared recess in the cingulum of the tooth or artificial crown; comp, REST SEAT
circumferential clasp \v ser-kūm-fa-rēn’-shāl klas’p: a retainer that encircles a tooth by more than 180 degrees, including opposite angles, and which generally contacts the tooth throughout the extent of the clasp, with at least one terminal located in an undercut area
circumferential clasp arm: syn, CIRCUMFERENTIAL CLASP
clamping force: the compressive force that a fastener exerts on a bolted joint. The stability of a bolted joint depends on the maintenance of the clamping force; syn, PRELOAD, comp, EMBEDMENT RELAXATION
clasp \klasp’; n (14c): the component of the clasp assembly that engages a portion of the tooth surface and either enters an undercut for retention or remains entirely above the height of contour to act as a reciprocating element; generally it is used to stabilize and retain a removable partial denture; syn, AKERS CLASP, BAR CLASP, CIRCUMFERENTIAL CLASP, COMBINATION CLASP, CONTINUOUS CLASP, INFRABULGE CLASP, SUPRABULGE CLASP, WROUGHT WIRE CLASP
clap arm: syn, CLASP
clap assembly \v lāsp a-sēm’-bli: the part of a removable partial denture that acts as a direct retainer and/or stabilizer for a prosthesis by partially encompassing or contacting an abutment tooth; *Editorial note for usage: components of the clasp assembly include the RETENTIVE CLASP, RECIPROCAL CLASP, CINGULUM, INCISAL OR OCCLUSAL REST, and MINOR CONNECTOR
clap guideline: syn, SURVEY LINE
classification system: syn, PROSTHODONTIC DIAGNOSTIC INDEX
clearance klār’-ens’; n (1563): a condition in which bodies may pass each other without hindrance. Also, the distance between bodies (GPT-4)
1.cleft klīft’; n: 1. a space or opening made through splitting; 2. a hollow between ridges or protuberances
2.cleft klīft’, adj: partially split or divided
cleft palate klīft’ pāl’t’; n (1841): 1. a congenital fissure or elongated opening in the soft and/or hard palate; 2. an opening in the hard and/or soft palate as a result of improper union of the maxillary process and the median nasal process during the second month of intrauterine development; syn, PALATAL CLEFT; comp, COMPLETE CLEFT PALATE, OCCULT CLEFT PALATE
cleft palate prosthesis: syn, SPEECH AID PROSTHESIS
cleft palate speech aid prosthesis: syn, SPEECH AID PROSTHESIS
clenching klēn’ ching’, vt (13c): the pressing and clamping of the jaws and teeth together frequently associated with acute nervous tension or physical effort
click klīk’; n: a brief, sharp sound, such as the snapping, cracking, or noise evident on excursions or opening of the mandible; a distinct snapping sound or sensation, usually audible (or by stethoscope) or on palpation, which emanates from the temporomandibular joint(s) during jaw movement; it may or may not be associated with internal derangements of the temporomandibular joint; clicking \klīk’-iŋ’; n: comp, EARLY CLOSING CLICK, EARLY OPENING CLICK, LATE CLOSING CLICK, LATE OPENING CLICK, MID OPENING CLICK, RECIPROCAL CLICK
clinical klīn’-i-kāl adj (ca. 1755): 1. of or related to or conducted in or as if within a clinic; 2. analytical or detached; clinically adv
clinical crown • color difference equations
critical crown ['kleɪn-tɪ-kraʊn]: the portion of a tooth that extends from the occlusal table or incisal edge to the free gingival margin
clinical remount: syn, REMOUNT PROCEDURE
clinometer n (1811): a device for measuring angles of elevation, inclination or declination;clinometric adj; clinometry n
clip ['klɪp]: n 1. any of numerous devices used to grip, clasp, or hook; 2. a device used to retain a removable dental prosthesis or a fixed dental implant-supported restoration, i.e., a bar connector, coping, or other retainer
closed bite slang: syn, DECREASED OCCLUSAL VERTICAL DIMENSION
closed lock slang: syn, CLOSED LOCK; DISPLACEMENT WITHOUT REDUCTION
closed reduction of a fracture ['kləʊzd riː-ˈdʌkʃən ûv ə frækˈʃuːr]: reduction (repositioning) and fixation of fractured bones without making a surgical opening to the fracture site
closest speaking space ['kləʊzst spɪst spɛkˈɪŋ spɑːs]: the space between the anterior teeth when the patient is speaking; according to Dr Earl Pound, the space should not be more or less than 1 to 2 mm of clearance between the incisal edges of the teeth when the patient is unconsciously repeating the letter “S.” Dr Meyer M. Silverman termed this speaking centric, which was defined as the closest relationship of the occlusal surfaces and incisal edges of the mandibular teeth to the maxillary teeth during function and rapid speech; this was later called closest speaking level by Dr Silverman and finally the closest speaking space
Silverman MM. Accurate measurement of vertical dimension by phonetics and speaking centric space. Dent Digest 1951;57:261-65
clutch ['klʌtʃ]: n a device placed in both the maxillary and mandibular arches for the purpose of supporting components used to record mandibular movement
coadapted [kəˌədəpˈtɪd]: adj (1836); 1. mutually adapted, especially by natural selection; 2. in medicine, the proper realignment of displaced parts; coadaptation n
cobalt chromium alloy: abbr, CoCr; a low-density, large-grained base metal dental casting alloy with prominent dendritic structure, composed from 60% to 75% Cobalt and up to 30% Chromium with trace elements that may include small amounts of Mo, Mn, Si, and N; chromium, by its passivation effect, enables corrosion resistance of the alloy; orig, Elwood Hayes, metallurgist, industrialist, 1900
coblation therapy: contr, cold ablation; passing a radiofrequency bipolar electrical current through saline with the production of a plasma field of sodium ions; this resultant ion field can separate intracellular bonds at a low temperature (60°C); a therapy applied in treating obstructive sleep apnea and tonsillectomy
Coble balancer ['kəbəl bæl-ən-ˈsɛr]: eponym for 1. an intraoral balancing device used to determine centric relation and obtain the centric relation record; 2. used to equilibrate fixed or removable complete dentures intraorally; orig, Lucian G. Coble, dentist, North Carolina, U.S.A.; comp, CENTRAL BEARING TRACING DEVICE, TRACING DEVICE
Coble LG. Correct centric position must be established for good denture fit and function. Dent Survey 1951;27:1391-93
Coble LG. A complete denture technique for selecting and setting up teeth. J Prosth Dent 1960;10:455-8
cohesion ['kəʊ-hiːn]: n 1. the act or state of sticking together tightly; 2. the force whereby molecules of matter adhere to one another; the attraction of aggregation; 3. molecular attraction by which the particles of a body are united throughout their mass
cohesive failure ['kəʊ-hiːv]: bond failure within a dental material as a result of a tensile or shearing force; comp, ADHESIVE FAILURE
cold curing resin nonstandard: syn, AUTOPOLYMERIZING RESIN
collarell less metal ceramic restoration ['koʊlərɛls mɛl-əs sa-ˈrɛm-ɪk]: a metal ceramic restoration with the extension of ceramic material onto the finish line of the preparation without visible metal substructure in the marginal area; porcelain crown margin is directly in contact with the prepared finish line; comp, PORCELAIN MARGIN
collateral ligaments ['kələtəl lɪˈgəmənts]: two or more ligaments paired to a single joint for the specific purpose of restricting extension and flexion within one plane only. Relative to the temporomandibular joint, there are two collateral (disal) ligaments, medial and lateral, which attach the articular disc to the medial and lateral poles of the condyle of the mandible. These ligaments have also been termed polar ligaments
colloid ['koʊloid]: n a material in which is suspended a constituent in a finely divided state that is invisible to the eye but capable of scattering light
colloidal silica: submicroscopic fumed silica frequently used as a suspension in a liquid and mixed with many phosphate-bonded casting investments to improve casting smoothness and control expansion
color ['koʊlər]: n 136: 1. a phenomenon of light or visual perception that enables one to differentiate otherwise identical objects; 2. the quality of an object or substance with respect to light reflected or transmitted by it. Color is usually determined visually by measurement of hue, saturation, and luminous reflectance of the reflected light; 3. a visual response to light consisting of the three dimensions of hue, value, and chroma; comp, PERCEIVED COLOR, PSYCHO-PHYSICAL COLOR
color blindness ['koʊlər bɹɪnsəs]: abnormal color vision or the inability to discriminate certain colors, most commonly along the red-green axis
color constancy ['koʊlər kɒnˈstænsə]: relative independence of perceived color to changes in color of the light source
color deficiency ['koʊlər dɪˈfiʃəns]: a general term for all forms of color vision that yield chromaticity discrimination below normal limits, such as monochromatism, dichromatism, and anomalous trichromatism
color difference ['koʊlər dɪˈfər-əns]: magnitude and character of the difference between two colors under specified conditions; referred to as ΔE
color difference equations ['koʊlər dɪˈfər-əns ɪˌkwɪə ˈzænəz]: - - shanz's equations that transform Commission Internationals d’Eclairage (CIE) coordinates into a more uniform matrix such that a specified distance between two colors is more nearly proportional to the magnitude of an observed difference between them regardless of their hue
color notation =color notation = the use of symbols in some orderly fashion by which the attributes of color may be defined or may be set down in written formula

color rendering index =color rendering index = a number from 1 to 100 given to a light source to indicate its relative equivalence to pure white light, which has a color rendering index (CRI) of 100. The closer the number is to 100, the more it resembles pure white light.

color scale =color scale = an orderly arrangement of colors showing graduated change in some attribute or attributes of color as a value scale

color solid =color solid = a symbolic figure in three dimensions that represents the relations of all possible colors with respect to their primary attributes of hue, value, and chroma. Usually, value appears as the vertical axis of the figure with hue and chroma represented in polar coordinates about the value axis, chroma being radial. The boundaries of the solid are actually irregular, but it is sometimes represented as a cylinder, a sphere, or a cube.

color standard =color standard = a color whose psychological dimensions have been accurately measured and specified

color stimulus =color stimulus = a stimulus to which the eye is sensitive and a color whose psychophysical properties are defined

color temperature =color temperature = the temperature in degrees Kelvin (Celsius plus 273°) of a totally absorbing or black body (object) that produces colors as the temperature changes; the range is from a dull red to yellow to white to blue; this term is sometimes used incorrectly to describe the color of “white” light sources; the correct term to describe the color of light sources is correlated color temperature.

colorimeter =colorimeter = a device that analyzes color by measuring it in terms of a standard color, scale of colors, or certain primary colors; an instrument used to measure light reflected or transmitted by a specimen

coloring =coloring = 1. the act of applying colors; 2. something that produces color or color effects; 3. the effect produced by applying or combining colors; comp, EXTRINSIC COLORING, INTRINSIC COLORING

combination clasp =combination clasp = a circumferential retainer for a removable partial denture that has a cast reciprocal arm and a wrought wire retentive clasp

combination syndrome =combination syndrome = the characteristic features that occur when an edentulous maxillae is opposed by natural mandibular anterior teeth and a mandibular bilateral extension-base removable partial denture, including loss of bone from the anterior portion of the maxillary ridge, hyperplasia of the tuberosities, papillary hyperplasia of the hard palate’s mucosa, supraeruption of the mandibular anterior teeth, and loss of alveolar bone and ridge height beneath the mandibular removable partial denture bases; syn, anterior hyperfunction syndrome

commence =commence = (1626); to reduce food into small parts (GPT-4); nuted, nutting vt; comminution =comminution = a-nöo shun; n

comminuted fracture =comminuted fracture = a-nöo tîd fràk chër; a fracture in which the bone is broken in several places in the same region; a fracture in which the bone is crushed and splintered

commisure =commisure = a-shòor; n (15c) a point of union or junction especially between two anatomic parts, i.e., corner of the mouth;

commisural =commisural = lús-zúr; adj, syn, MODIOLUS

commissure splint =commissure splint = a device placed between the lips that assists in achieving increased opening between the lips; use of such devices enhances opening where surgical, chemical, or electrical alterations of the lips has resulted in severe restriction or contractures; syn, lip splint; comp, interocclusal expansion device, OCCLUSAL DEVICE

compact bone =compact bone = any osseous substance that is dense or hard; syn, CORTICAL BONE

compensation curve =compensation curve = 1. the anteroposterior curving (in the median plane) and the mediolateral curving (in the frontal plane) within the alignment of the occluding surfaces and incisal edges of artificial teeth that is used to develop balanced occlusion; 2. the arc introduced in the construction of complete removable dental prostheses to compensate for the opening influences produced by the condylar and incisal guidance’s during lateral and protrusive mandibular eccentric movements; syn, compensating curvature, compensating curve

complementary colors =complementary colors = two colors that, when mixed together in proper proportions, result in a neutral color; colored lights that are complementary when mixed in an additive manner form white light and follow the laws of additive color mixture; colorants that are complementary when mixed together form black or gray and follow the laws of subtractive colorant mixture; 2. colors located in directly opposite positions on the color wheel

complete arch subperiosteal implant =complete arch subperiosteal implant = arch sùp-pêr’e-ôs-tîl im-plànt; a device placed under the periosteum on the residual ridge to provide abutments for supporting a removable or fixed complete denture in a fully edentulous arch; Editorial note for usage: such implants should be described by means of their relationship to their bases of support, the alveolar bone; as such, at placement, the implant is described as an epistomal dental implant; comp, EPOSTOMAL DENTAL IMPLANT

complete cleft palate =complete cleft palate = kûf plàt; an opening extending through the anterior alveolar ridge, and primary and secondary palates; syn, PALATAL CLEFT

complete crown =complete crown = kûf plàt krown; syn, ARTIFICIAL CROWN

complete denture =complete denture = kûf plàt dën’chur; a fixed or removable dental prosthesis that replaces the entire dentition and associated structures of the maxillae or mandible; syn, FIXED COMPLETE DENTURE, REMOVABLE COMPLETE DENTURE

complete denture prosthetics =complete denture prosthetics = kûf plàt dën’chur prôs-thët’iks; obs 1. the replacement of the natural teeth in the arch and their associated parts by artificial substitutes; 2. the art and science of the restoration of an edentulous mouth (GPT-4); syn, COMPLETE DENTURE PROSTHODONTICS

complete denture prosthodontics =complete denture prosthodontics = kûf plàt dën’chur prôs-tho’dôn tîks; refers to that body of knowledge and skills pertaining to the restoration of the edentulous arch with a complete denture; Editorial note for usage: complete denture prosthodontics generally refers to the complete fixed and complete removable denture

complete facial moulage =complete facial moulage = kûf plàt fà shal mûo-lâz; an impression procedure used to record the soft tissue contours of the whole face

complete mouth rehabilitation =complete mouth rehabilitation = this term applies to the restoration of teeth, with or without dental implants, with fixed dental prostheses in the maxillae and mandible

completed denture base =completed denture base = syn, DEFINITIVE DENTURE BASE

complicated fracture =complicated fracture = kûf pîl-kà tîd fràk chër; a fracture with significant injury to adjacent soft tissues (i.e., neurovascular injury)

componer =componer = kûf po-mêñ; n (1998): a poly-acid modified composite resin, composed of non-reactive glass filler, acid-modified dimethylacrylate resin, and an initiator; componers do not have the
compressor • condylarthrosis

capacity to chemically bond to tooth surfaces, therefore, they need primer/bonding resin agents for tooth bonding applications; comp, GLASS IONOMER, RESIN-MODIFIED GLASS IONOMER

components of mastication \kòm-pò\’nəntz \uv \məs\’tī-kā\’shən\v; those factors of food manipulation and comminution that precede deglutition

components of occlusion \kòm-pò\’nəntz \uv \a-kliū\’zhen\v; the various elements that are involved in occlusion, such as the temporomandibular joints, the associated musculature, the teeth, their contacting surfaces and investing tissues, and/or the dental supporting structures; syn, DETERMINANTS OF MANDIBULAR MOVEMENT

composite resin: a highly cross-linked polymeric material reinforced by a dispersion of amorphous silica, glass, crystallline, or organic resin filler particles and/or short fibers bonded to the matrix by a coupling agent; comp, FIBER-REINFORCED COMPOSITE

composite resin laminate veneer: a thin, bonded composite resin restoration that restores the facial, incisal, and part of the proximal surfaces of teeth requiring esthetic restoration; comp, FACING

composite resin veneer: laboratory fabrication of a prosthesis with layered composite resin bonded to a framework; comp, FACING

compound n, slang (19c): syn, IMPRESSION COMPOUND, MODELING PLASTIC IMPRESSION COMPOUND

compound joint \kòm-pound\’ jointe; a joint involving three or more bones

compression molding \kɔm-prɛʃn\’ məld\’ing\v; the act of pressing or squeezing together to form a shape within a mold; the adaptation, under pressure, of a plastic material into a mold

compression of tissue: syn, TISSUE DISPLACEMENT

compressive stress \kɔm-prɛs\’strɛs\v; the internal induced force that opposes the shortening of a material in a direction parallel to the direction of the stresses; any induced force per unit area that resists deformation caused by a load that tends to compress or shorten a body

computer-aided engineering: acronym is CAE; incorporates mathematical algorithms to control and assist the design and manufacturing of dental prostheses; comp, COMPUTER-AIDED DESIGN

computer numerical control: acronym is CNC; a seamless integration of computer-aided design and computer-aided manufacturing programs for making 3D objects; this could be subtractive or additive technique

computer tomography guided surgery: a surgical procedure that uses a device (surgical guide) that was printed from a digital file of the cone beam computed tomography (CBCT); comp, STEREOTACTIC SURGERY, SURGICAL GUIDE

computerized tomography \kɔm-pyʊ\’tɛ-mɔd\’ məg\’ra-fɛs\v; acronym is CT; the technique by which multidirectional x-ray transmission data through a body is mathematically reconstructed by a computer to form an electrical cross-sectional representation of a patient’s anatomy; CT is used as an acronym to designate any technical field associated with these techniques; comp, CBCT

concrecence \kɔn-krɛs\’ens\v; the union of roots of approximating teeth via deposition of cementum

concretion \kɔn-krɛ\’shən\v; any inorganic mass in a natural cavity or organ

condensation n. 1. amalgam condensation: the compaction of dental amalgam by using force to remove excess mercury and ensure continuity of the matrix phase; 2. porcelain condensation: the process of increasing the density of dental porcelains during processing by removing excess water with vibration and blotting

condensation reaction \kʊn\’dɛn-sə\’shən rɛ-ək\’shən\v; any chemical reaction between two molecules to form a larger molecule, with the elimination of a smaller molecule

conditional color match \kʊn-dɪʃən ə-nəl kʊl\’ər ˈmætʃ\v; a pair of colors that appear to match only under limited conditions, such as a particular light source and a particular observer; a metameric match

condylar agenesis \kʊn\’dɑ\’lər ə-ˈjen-səs\v; a developmental abnormality characterized by the absence of the condyle

condylar articulator \kʊn\’dɑ\’lər ər-tɪk \’ya-la-tɔn\v; an articulator with the condylar path components as part of the upper member and whose condylar replica components are part of the lower member; syn, ARCON ARTICULATOR; comp, NONARCON ARTICULATOR

condylar axis \kʊn\’dɑ\’lər ək\’sɪs\v; a hypothetical line through the mandibular condyles around which the mandible may rotate

condylar dislocation \kʊn\’dɑ\’lər dɪs\’lo-kə\’shən\v; a self-reducing displacement of the mandibular condyle usually forward of the articular eminence

condylar displacement: positioning of the condyle out of its normal location in the glenoid fossa

condylar guidance \kʊn\’dɑ\’lər ɡɪd\’n\s\v; vt: mandibular guidance generated by the condyle and articular disc traversing the contour of the articular eminence

condylar guidance \kʊn\’dɑ\’lər ɡɪd\’n\s\v; n: the mechanical form located in the posterior region of an articulator that controls movement of its mobile member

condylar guide assembly \kʊn\’dɑ\’lər ɡɪd ə-sɛm\’bli\v; the components of an articulator that guide movement of the condylar analogues

condylar guide inclination \kʊn\’dɑ\’lər ɡɪd ɪn\’klə-nən\’sən\v; the angle formed by the inclination of a condylar guide control surface of an articulator and a specified reference plane; comp, LATERAL CONDYLAN INCLINATION

condylar hinge position \kʊn\’dɑ\’lər hɪn\j\ ˌpə-ˈziː\n\ən\v; obs: the position of the condyles of the mandible in the glenoid fossae at which hinge axis movement is possible (GPT-4)

condylar inclination \kʊn\’dɑ\’lər ɪn\’klə-nən\’sən\v; n: the direction of the condyle path (GPT-4)

condylar path \kʊn\’dɑ\’lər pəθ\v; that path traveled by the mandibular condyle in the temporomandibular joint during various mandibular movements

condylar path element \kʊn\’dɑ\’lər pəθ ə-lə-ment\v; the member of a dental articulator that controls the direction of condylar movement

condylar path tracing \kʊn\’dɑ\’lər pəθ ˈtræ-sɪŋ\v; a graphic registration of the movement of the condyle; syn, MANDIBULAR TRACING

condylar slant nonstand: syn, CONDYLAN PATH, LATERAL CONDYLAN PATH

condylar subluxation \kʊn\’dɑ\’lər ˈsuːb-lʌk\’sən\v; a self-reducing incomplete or partial dislocation of the condyle

condylarthrosis \kʊn\’dɑ\’lər-thrəʊ\’sɪs\v; n: an ellipsoidal articulation; a modification of the ball/socket type of synovial joint in which the articular joint surfaces are ellipsoid rather than spheroid; owing to the arrangement of the muscles and ligaments around the joint, all movements are permitted except rotation about a vertical axis; syn, articulation ellipsoidæa, condylar articulation, condylar joint, condyloid joint, or ellipsoidal joint

THE JOURNAL OF PROSTHETIC DENTISTRY
condyle (ˈkōn-dil, -dil) n (1634): an articular prominence of a bone, i.e., in the mandible; an ellipsoidal projection of bone that articulates with the articular eminence of the temporal bone, having a mediolateral dimension that is greater than its anteroposterior dimension; condylar adj comp, CONDYLAR PATH, LATERAL CONDYLAR PATH, MANDIBULAR CONDYLE, NECK OF THE CONDYLE

condyle chord: syn, CONDYLAR AXIS

condyle head: syn, CONDYLE

condyle path: syn, CONDYLAR PATH

condylectomy: surgical removal of the condyle

condylectomy: surgical cut through the neck of the condylar process; also refers to surgical removal of a portion of the articulating surface of the mandibular condyle (called a condylar shave)

cone  n (1562): one of the receptors of color vision found in the retinal eye of the light and concentrated in the macula lutea

cone beam computed tomography (CBCT): a dispersion of x-rays in a divergent pattern and captured for a digital volumetric data or voxels for anatomic imaging

confluent defect of the sinus: an oronasal or oorotinal communication as a result of an anatomic defect of the maxilla

conformer: the portion of a maxillofacial prosthesis that serves to fill a defect as a part of the prosthesis; syn, SECTION

congenital  n (1796): existing at, and usually before, birth; referring to conditions that are present at birth, irrespective of their causation

connecting bar: syn, BAR CONNECTOR; comp, MAJOR CONNECTOR

connective tissue  n: a tissue of mesodermal origin rich in interfacing processes that supports or binds together other tissues

1 connector  n (15c): in removable prosthodontics, the portion of a removable partial denture that unites its components; comp, BAR CONNECTOR, CONTINUOUS BAR CONNECTOR, MAJOR CONNECTOR, MINOR CONNECTOR

2 connector  n in fixed prosthodontics, the portion of a fixed partial denture that unites the retainer(s) and pontic(s); comp, INTERNAL CONNECTOR, NONRIGID CONNECTOR, RIGID CONNECTOR, SUBOCCLUSAL CONNECTOR

connector bar: syn, BAR CONNECTOR

consultation  n (15c): a deliberation between those who render health care regarding patient diagnosis and/or their treatment

1 contact  n (1626): the union or junction of surfaces; the apparent touching or tangency of bodies; comp, PROXIMAL CONTACT

2 contact  n vi (1834): to make contact; to bring into contact; to enter or be in contact with; comp, BALANCING OCCLUSAL CONTACT, DEFLECTIVE OCCLUSAL CONTACT, INITIAL OCCLUSAL CONTACT, OCCLUSAL CONTACT

contact angle: the angle formed by a tangent to the drop of liquid and the solid surface; a measure of WETTABILITY

contact area  n the region on the proximal surface of a tooth that touches an adjacent tooth; syn, INTERPROXIMAL CONTACT AREA

contact scanner: a 3D-scanner acquisition of the surfaces of an object by mechanical contact and by using line tracings; comp, coordinate measuring machine

continuous bar connector  n: a metal bar usually resting on the lingual surfaces of mandibular anterior teeth to aid in their stabilization and act as an indirect retainer in an extension-base removable partial denture

continuous bar indirect retainer: syn, CONTINUOUS BAR CONNECTOR

continuous bar retainer: syn, CONTINUOUS BAR CONNECTOR; comp, INDIRECT RETAINER

continuous clasp  n: 1. in removable prosthetics, a circumferential retainer (clasp) whose body emanates from an occlusal rest and extends across the buccal or lingual surface of more than one tooth (hence, continuing on) before engaging an undercut on the proximal wall farthest from the occlusal rest; 2. any one of several early 20th-century designs for clasping natural teeth to retain a removable partial denture

continuous loop wire clasp  n: this clasp assembly was used to completely encircle a tooth, particularly a straight sided tooth, by means of one wire. If the retainer was not continuous, it was described as an open loop wire clasp; orig. J. Wright Beach; dentist, Toronto, Canada

Roach FE. Partial dentures. The Dental Summary 1915:35.203-10

continuous spectrum  n: a spectrum in which radiations of all wavelengths are represented; opposed to line spectra or band spectra

1 contour  n (1662): an outline, especially of a curving or irregular figure: the line representing this outline; the general form or structure of something; comp, HEIGHT OF CONTOUR, TRANSITIONAL CONTOUR

2 contour  n (1844): following contour lines or forming furrows or ridges along them; made to fit the contour of something

3 contour  n (1871): to shape the contour of; to shape so as to fit contours; to construct in conformity to a contour

contour graft: syn, ONLAY GRAFT

contravelve  n: 1. an external bevel arising from the occlusal surface or edge of a tooth preparation and placed at an angle that opposes or contrasts the angle of the surface from which it arises; 2. an external bevel arising from the occlusal surface or edge of a preparation; syn, BEVEL

contraction  n: 1. in muscle physiology, the development of tension in a muscle in response to a stimulus; comp, ISOMETRIC CONTRACTION, ISOTONIC CONTRACTION, POSTURAL CONTRACTION

contracture  n: a permanent shortening of a muscle; syn, MUSCLE CONTRACTION, MYOFIBROTIC CAPSULAR CONTRACTION, MYOSTATIC CONTRACTURE

contralateral  n: occurring on or acting in conjunction with similar parts on an opposite side

contralateral condyle: comp, NONWORKING-SIDE CONDYLE

convergence angle  n: the angle, measured in degrees as viewed in a given plane, formed by the axial walls when a tooth or machined surface on a metal or ceramic material is prepared for a fixed dental prosthesis; Editorial note for usage: the term total occlusal convergence applies to the angle formed between two opposing axial walls; the term taper applies to the angle formed between an axial wall and the path of placement onto the tooth or machined surfaces of a metal or ceramic material; syn, angle of convergence, TOTAL OCCLUSAL CONVERGENCE; comp, TAPER

coordination  n (1643): smooth, controlled symmetrical movement
coordination • craniomandibular articulation

1. cope \ˈkōp\, n (bef.12c): the upper half of any flask used in casting; the upper or cavity side of a denture flask used in conjunction with the drag or lower half of the flask; comp, DRAG

2. cope \ˈkōp\, vb: to dress, cover, or furnish with a cope; to cover, as if with a cope or coping

coping \ˈkō-ping\, n (ca. 1909): a thin covering or crown made of metal alloy or ceramic that is luted to an abutment supporting an overdenture, fixed partial denture, or fixed complete denture; *Editorial note for usage*: the metal casting for a metal-ceramic crown or fixed partial denture is referred to as a FRAMEWORK; comp, COPING IMPRESSION, FRAMEWORK, TRANSFER COPING

coping impression \ˈkō-ping ɪm-prēshˈən\: an impression, usually encompassing an entire dental arch, that uses metal or resin copings placed on prepared teeth. The copings are repositioned before the pouring of a working cast; comp, PICK-UP IMPRESSION

coping pick-up impression: syn, COPING IMPRESSION; comp, PICK-UP IMPRESSION

coping prosthesis obs: syn, OVERDENTURE

copolymer resin \ˈkō-pōlˈ-ə-men\: polymers formed from more than one type of molecular repeat unit

copper band \ˈkōpər bānd\: a copper cylinder used as a matrix for making an impression

copy milling: also termed computer numeric controlled (CNC)-milling; computer-aided manufacturing (CAM) without computer-aided design (CAD) by using the direct scan of an object

coralliform \ˈkōrəl-i-fərm\ adj: having the form of coral; branched like a coral; often with reference to certain types of hydroxylapatite implant materials

core \ˈkôr, kōr\, n (14c): 1. the center or base of a structure, 2. the foundation restoration which restores sufficient coronal anatomy of a vital or endodontically treated tooth

coronal \ˈkōr-nəl, kōr-ˈ nə-ral\ adj (15c): 1. of or relating to a crown or crown; 2. relating to any longitudinal plane or section that passes through a body at right angles to the median plane; 3. pertaining to the crown of a tooth

coronal plane \ˈkōr-nə-nəl ˈplān\: lying in the direction of the coronal suture, or of relating to the frontal plane, which passes through the long axis of a body

coronectomy: resection of the crown of a tooth while intentionally retaining the root in the alveolar bone; syn, DECORONATION

coronoid maxillary space \ˈkōr-ə-noid, kōrˈ-ˌmāk ˈsa-lər ˈe spəs\: the region between the medial aspect of the coronoid process of the mandible and the buccal aspect of the tuberosity of the maxillae, bounded anteriorly by the zygomatic arch

coronoid process \ˈkōr-ə-noid, kōrˈ-ˌpro-sēz\: the thin triangular rounded eminence originating from the anterosuperior surface of the ramus of the mandible; comp, HYPERPLASIA OF THE CORONOID PROCESS

coronoidectomy: surgical removal of the coronoid process

coronoplasty \ˈkōr-ən-pləs-tē\, n (20c): syn, OCCLUSAL RESHAPING, ESTHETIC RESHAPING

corrected cast: syn, ALTERED CAST

corrective wax: syn, DENTAL IMPRESSION WAX

correlated color temperature \ˈkōr-əˌlād tə ˈklər əˌtēmˈ pər-əˈchoor\: the term describing the color of white light sources; specifically, it is the temperature of the Planckian (black body) light source that produces the chromaticity; it is measured in degrees Kelvin, to which a black body must be raised to provide the closest match, in chromaticity, to a particular light source

corrode \ˈkərˌōd\, vt (15c): 1. deterioration of a metal as a result of an electrochemical reaction within its environment; 2. to eat away by degrees as if by gnawing; 3. to wear away gradually usually by chemical action

corrosion \ˈkərˌō-shen\ n (15c): the action, process, or effect of corroding: a product of corroding; the loss of elemental constituents to the adjacent environment

corrosive \ˈkərˌō-siv\ adj (14c): tending or having the power to corrode

cortical bone \ˈkôr-ti-kəl\: the peripheral layer of compact osseous tissue

coupling \ˈkōp lîŋ\, n: a device that serves to link or connect the ends of adjacent parts or objects

coupling agent: chemical agent enhancing surface covalent bonding between organic and inorganic components; related to dental ceramics and nanoparticles in composite resins; silane is commonly used in dentistry for this purpose

coupling lug \ˈkōp lîŋ lūɡ\: a small projecting part of a larger member; a projection or a casting to which a bolt or other part may be attached

covalent bond \ˈkə-vələnt bōnd\ n (1939): a chemical bond between two atoms or radicals formed by the sharing of a pair (single bond), two pairs (double bond), or three pairs (triple bond) of electrons; syn, primary bond

cover screw: syn, HEALING SCREW

Craddock mounting: eponym for a technique for articulating dental casts by using Bonwill’s four-inch equilateral triangle, such that equal distances exist between the condylar elements and the mandibular incisors at the occlusal vertical dimension (OVD)

cranial base \ˈkrənəl bās\: the inferior part of the skull that is thought to be relatively stable throughout life and is used in cephalometrics as a landmark from which to measure changes as a result of growth, time, or treatment

cranial prosthesis \ˈkrənəl prōs-ˌthē-sĭs\: a biocompatible, permanently implanted replacement (maxillofacial prosthesis) for a portion of the skull bones; an artificial replacement for a portion of the skull bones; comp, cranial implant, cranioplasty prosthesis, skull plate

craniofacial defects \ˈkrənə-ˌō-fəl dē ˈfekts, dî ˈfekts\: malformations associated with the head and face as a result of congenital, acquired, traumatic injury.

craniomandibular articulation \ˈkrənəˌmændə-ˌbəl ārˈtik-yəlˈāshən\: both temporomandibular joints functioning together as a bilateral sliding hinge joint connecting the mandible to the cranium; comp, ARTHRODIAL JOINT, TEMPOROMANDIBULAR JOINTS
May 2017  

To the cementoenamel junction or an artifical  

The skull, head, or tooth; the summit; that portion of a tooth occlusal  

Develop a mesh of fine cracks; crazed; crazing (kra-zing) vt  

Craze (kra泽) n (1534): a crack in a surface or coating (as of glaze or enamel)  

Craze (kra泽) vi (12c): to slip or gradually shift position; to change shape permanently as a result of prolonged stress or exposure to high temperature; crept (krep); creeping (krep ing)  

Creep (krep) n (1818): the slow change in dimensions of an object as a result of prolonged exposure to high temperature or stress  

Creep (krep) vt; to slip or gradually shift position; to change  

Crepitation (krep ĭ-ta-shun); n: a crackling or grating noise in a joint during movement; the noise made by rubbing together the ends of a fracture  

Crepitus n; syn, Crepitation, joint crepitus  

Crete (krest); n (14c): a ridge or prominence on a part of a body; in dentistry, the most coronal portion of the alveolar process  

Crete of the ridge (krest ūv tha ri); the most prominent continuous surface of the residual ridge; not necessarily coincident with the center of the ridge; syn, residual ridge crest; comp, residual ridge  

Crevicular epithelium (krevî-vi-kyoo-lar ĕp-a-thĕ-le-um) n; nonstandard; syn, SULCULAR EPITHELIUM  

Crevicular Fluid (krevî-vi-cyoo-lar fiŏo-ŭd) n; syn, gingival Crevicular Fluid  

Cribiform plate (krib ra-fŏrm) obs: in dentistry, the alveolar bone proper  

Cristobalite (kris tah-ba-lit) n: an allotropic form of crystalline silica used in dental casting investments  

Cross-arch balance: syn, cross-arch balanced articulation  

Cross-arch balanced articulation (kroś, kroś ărch băl-ăn-sd ār-tĭk-yā-la-shun); the simultaneous contact of the buccal (excluding buccal cusp contact in LINGUALIZED OCCLUSION) and lingual cusps of the working-side maxillary dentition teeth with the opposing buccal and lingual cusps of the mandibular teeth, concurrent with denture tooth contact of the nonworking-side maxillary lingual cusps with the mandibular buccal cusps in excursive movements  

Cross-arch stabilization (kroś, kroś ărch stă-ba-lĭ-za-shun); resistance against dislodging or rotational forces obtained by using a fixed or removable partial denture design that uses natural teeth on the opposite side of the dental arch from the edentulous space to assist in stabilization  

Cross bite: syn, reverse articulation  

Cross-bite occlusion: syn, reverse articulation  

Cross-bite teeth: syn, reverse articulation teeth  

Cross-mounting: the interchangeable mounting on an articulator of two or more maxillary and mandibular cast relationships  

Cross pinning (kroś, kroś pin’ing); the augmentation achieved in retention of a cast restoration by the placement of a pin through the axial wall of a dental casting into tooth dentin  

Cross-tooth balance: comp, balanced articulation, cross-tooth balanced articulation  

Cross-tooth balanced articulation (kroś, kroś ăoth băl-ăn-sd ār-tĭk-yā-la-shun); the harmonious contact of opposing working-side buccal and lingual cusps with simultaneous denture tooth contact on the nonworking-side in excursive movements  

Crown (krosvn); n (12c): 1. the highest part, as the topmost part of the skull, head, or tooth; the summit; that portion of a tooth occlusal to the cementoenamel junction and an artificial substitute for this;  

2. an artificial replacement that restores missing tooth structure by surrounding part or all of the remaining structure with a material such as cast metal alloy, metal-ceramics, ceramics, resin, or a combination of materials  

Crown (krosvn) vt (12c): to place on the head, as to place a crown on a tooth, dental implant, or tooth substitute; Editorial note for usage: implies fabrication of a restoration for a natural tooth, dental implant, and/or dental implant abutment  

Crown flash (krosvn flâsk); a sectional, box-like case in which a sectional mold is made of artificial stone or plaster for the purpose of processing dentures or other resinous restorations  

Crown fracture (krosvn frâk’ chun); micro- or macroscopic cleavage in the coronal portion of a tooth  

Crown-Implant Ratio: the physical relationship between the portion of the implant-supported restoration not within alveolar bone compared with the portion of the implant within alveolar bone, frequently determined by radiographic examination  

Crown lengthening: a surgical procedure designed to increase the extent of supragingival tooth structure for restorative or esthetic purposes; syn, apical repositioning surgery, lengthening of clinical crown  

Crown-root Ratio (krosvn-ĭŏt rā-shō, rā shē-ŏ); the physical relationship between the portion of the tooth not within the alveolar bone, as determined by a radiograph, compared with the portion of the tooth within alveolar bone  

Crown slitter or splitter (krosvn slĭt’ er); a mechanical device used to debond the luting agent at the facial surface of an artificial crown to facilitate its removal (GPT-4)  

Crucible (krosvĭ șa-ba-l); n (15c); a vessel or container made of any refractory material (frequently ceramics) used for melting or calcining any substance that requires a high degree of heat  

Crucible Former (krosvĭ șa-ba fôr’mĕr); the base to which a sprue former is attached while the wax pattern is being invested in refractory investment; a convex rubber, plastic, or metal base that forms a concave depression or crucible in the refractory investment  

Crypt (kripĭt); n (1789): 1. a chamber wholly or partly underground; 2. in anatomy, a pit, depression, or simple tubular gland  

CT: acronym for computerized tomography  

Cuff (kŭf); n (14c); something that encircles; a band about any body  

Cul-de-sac (kŭl-di-săk); n (1738); a blind pouch or tubular cavity closed at one end  

Cumulative dose (kyŏŏm ya-la-tĭv, -ya-la-tĭv dŏsĭ); the total accumulated dose resulting from a single or repeated exposure to radiation of the same region or of the whole body; if used in area monitoring, it represents the accumulated radiation exposure over a given period of time  

cure (kūr) vb (15c); slang; syn, polymerize  

cure (kūrîn) vb (1594); to take a turn, change, or deviation from a straight line or planar surface without angularity or sharp breaks; a non-angular deviation from a straight line or surface; curved (kūrînd) adj; curving (kūrîng) vb; comp, reverse curve  

curve of Monson (kūrĭv ŭv Môn’-son); eponym for a proposed ideal curve of occlusion in which each cusp and incisal edge touches or conforms to a segment of the surface of a sphere 8 inches in diameter with its center in the region of the glabella; orig, George S. Monson, dentist, Minnesota, U.S.A., 1869-1933  

Monson GS. Occlusion as applied to crown and bridgework. J Nat Dent Assoc 1920;7:399-417  

curve of occlusion • definitive cast

curve of occlusion  kûrv úv a-kłôo’shun’s: the average curve established by the incisal edges and occlusal surfaces of the anterior and posterior teeth in either arch

curve of Pleasure  kûrv úv Plêzh’e’n’s. 1. eponym for a helicoid curve of occlusion that, when viewed in the frontal plane, conforms to a mediolaterally convex curve in which the lingual surfaces of the teeth are more coronal to the buccal surfaces, except for the last molars, which reverse that pattern; 2. in excessive wear of the teeth, the obliteration of the cusps and formation of either flat or cupped-out occlusal surfaces, associated with reversal of the occlusal plane of the premolar, first and second molar teeth (the third molars being generally unaffected), whereby the occlusal surfaces of the mandibular teeth slope facially instead of lingually and those of the maxillary teeth incline lingually; orig, Max A. Pleasure, dentist, New York, U.S.A., 1903-1965; syn. ANTIMONON CURVE, REVERSE CURVE. Pleasure MA. Prosthetic occlusion—a problem in mechanics. J Am Dent Assoc and Dent Cosmos 1937;24:1330-38

curve of Wilson: 1. eponym for the MEDIOLATERAL CURVE; 2. in the theory that occlusion should be spherical, the curvature of the cusps as projected on the frontal plane expressed in both arches; the curve in the mandibular arch being concave and the one in the maxillary arch being convex; orig, George H. Wilson, dentist, Ohio, U.S.A., 1855-1922

curvi-linear  kûr’va-lin’i-e-n’l adj (1710): consisting of or bounded by curved lines; represented by a curved line

cusp  kûsp m: cone-shaped protuberance on the crown of a tooth

cusp angle  kûsp áng’gâl’s: the angle made by the average slope of a cusp with the cusp plane measured mesiodistally or buccolingually

cusp-fossa articulation scheme: an occlusal arrangement where the maxillary and mandibular centric cusps articulate with the opposing fossae in maximal intercuspal position

cusp height  kûsp hit’; the perpendicular distance between the tip of a cusp and its base plane

cusp-marginal ridge articulation scheme: an occlusal arrangement where the mandibular second premolar buccal cusp and mandibular molar mesiobuccal cusp articulate with the opposing occlusal embrasures in maximal intercuspal position

cusp plane  kûsp plän’s: the plane determined by the two buccal cusp tips and the highest lingual cusp of a molar

cusp plane angle  kûsp plän áng’gâl’s: the incline of the cusp plane in relation to the plane of occlusion

cuspal interference:  syn, DEFLECTIVE OCCLUSAL CONTACT

cuspid  kûspíd n; compound, cuspid guidance, cuspid lift, cuspid lifted articulation, cuspid protected occlusion, cuspid rise, cuspid rise articulation; Editorial note for usage: refers to terms relating to CANINE

cuspless teeth  kûsp’les‘têth’s: teeth designed without cusp height; syn, NONANATOMIC TEETH, ZERO-DEGREE TEETH

custom anterior guide table: used for transferring to an articulator the contacts of anterior teeth when determining their influence on border movements of the mandible. Acrylic resin is molded by using the articulator pin to record and preserve this information; comp, MECHANICAL ANTERIOR GUIDE TABLE, ANTERIOR GUIDE TABLE

custom dental implant abutment: syn, DENTAL IMPLANT ABUTMENT, comp, UCLA CROWN

custom tray  kû’s’um trâ’t’s: an individualized impression tray made from a cast recovered from a preliminary impression; it is used in making a final impression

custom tray relief: an agent applied onto a preliminary cast in fabrication of a custom tray to aid in reduction or elimination of undesirable pressure or force from a specific region while making a definitive impression; comp, CUSTOM TRAY RELIEF

custom tray spacer: an agent applied onto a preliminary cast in fabrication of a custom tray to provide space for the impression material in order to make a definitive impression; comp, CUSTOM TRAY RELIEF

cyanoacrylate  sî-a-no-ô’k’râ-lat’ n (20c): a single component, moisture-activated, thermoplastic group of adhesives characterized by rapid polymerization and excellent bond strength; mildly cytotoxic and absorbs water in wet environment

D

Davis crown obs: eponym for a dental restoration supported by a post in the root canal over which was cemented a porcelain artificial crown in direct contact with the root face of the tooth; a later modification involved a gold casting that improved the fit between the root and artificial tooth; orig, Wallace Clyde Davis, dentist, Nebraska, U.S.A., 1866-1950

Davis WC. Essentials of operative dentistry. 1st ed. Lincoln, NE: Author; 1911

Davis WC. Essentials of operative dentistry. 2nd ed. St. Louis: Mosby; 1916

debridement  ’da-brê’d-mânt’, dî-brê’d-měnt’ n (ca. 1842): the removal of inflamed, devitalized, contaminated tissue or foreign material from or adjacent to a lesion

decidous dentition: syn, PRIMARY DENTITION

decoration: syn, CORONECTOMY

decortication  ’de-kôr’ti-kâ’t’s: vt: decorticator ’de-kôr’ti-kâ’t’or’ n

decreased occlusal vertical dimension  ’de-kres’d a-kłôò’sal vûr’ti-kal dî-mên’shun’s: a reduction in the distance measured between two anatomic points when the teeth are in occlusal contact

deep bite  nonstand: excessive vertical overlap; comp, VERTICAL OVERLAP

deep heat therapy: syn, DIATHERMY

defective color vision  ’df-ék’tiv kîl’er’ vîzh’un’s: the condition in which color discrimination is significantly reduced in comparison with the normal trichromat; the forms of color defective vision can be divided into three main groups: dichromatic vision, anomalous trichromatic vision, and monochromatic vision; comp, COLOR BLINDNESS, COLOR DEFICIENCY

defective occlusal contact  ’df-ék’tiv tiv a-kłôò’sal kôn’tak’t’obs: syn, DEFLECTIVE OCCLUSAL CONTACT

definitive cast  ’df-în’tiv kást’s: a replica of the tooth surfaces, residual ridge areas, and/or some parts of the dental arch and/or facial
structures used to fabricate a dental restoration or prosthesis; syn, final cast, MASTER CAST

definitive denture base: refers to the polymerized removable base that will be incorporated into the definitive prosthesis (removable complete denture, removable partial denture, obturator); it covers the oral mucosa of the maxillae and/or mandible; it can be used to record jaw relations and allow try-in of artificial teeth, which will be attached by means of a second processing; syn, COMPLETED DENTURE BASE, PROCESSED DENTURE BASE

definitive obturator \ˈdi-fi-nə-təv ˈob-tə-rə-tər\: a maxillofacial prosthesis that replaces a portion or all of one or both maxillae and associated anatomy as a result of surgery or trauma; a definitive obturator is made when tissue changes or recurrence of tumor are unlikely and a more long-term prosthetic rehabilitation can be achieved

definitive palatal lift prosthesis: syn, PALATAL LIFT PROSTHESIS

definitive prosthesis \ˈdi-fi-nə-təv prəs-thēˈsis\: any dental or maxillofacial prosthesis designed for long-term use

definitive speech aid prosthesis: syn, SPEECH AID PROSTHESIS

deflection \ˈdi-flɛk-tən\ n (1605): 1. a turning aside or off course; 2. a continuing eccentric displacement of the mandibular midline incisal path symptomatic of restriction in movement

deflective occlusal contact \ˈdi-flɛk-tiv ə-klooˈsal kənˈtakt\: a contact that displaces a tooth, diverts the mandible from its intended movement or displaces a removable denture from its basal seat; comp, OCCLUSAL DISHARMONY, OCCLUSAL INTERFERENCE, OCCLUSAL PREMATURITY

deformation \ˈde-fər-mən\ ˈdē-ˌfər-ən\ n (15c): the change of form or shape of an object

degas \ˈde-gas\ vt (1920): 1. to remove gas from an object or substance; 2. the name commonly used to denote the first heat cycle (oxidation cycle) in fabrication of a metal ceramic restoration that removes surface impurities from the metallic component and produces surface oxides prior to the application of opaque porcelain; degassed \ˈde-gas\d; degassing \ˈde-gas\ing

degenerative arthritis: syn, OSTEOARTHRITIS

degenerative joint disease: syn, OSTEOARTHRITIS

deglutition \ˈdi-glu-tish\ən\ n (1650): the coordination of voluntary and involuntary muscle contractions at the initiation of digestion; the act of swallowing

dehisce \ˈdi-his\k\ ˈdē-his\k\ vt (1658): to split or peel down along a natural line; to discharge the contents by so splitting; dehisced \ˈdi-his\d; dehiscing \ˈdi-his\ing

dehiscence \ˈdi-his\k\ens\ n (ca. 1828): an act or instance of dehiscing, i.e., separation of wound margins

delayed dentition \ˈdi-liˈdən tən\ sir\ ˈdi-liˈdən tən\ en\: the eruption of the first teeth of the primary dentition or the permanent dentition considerably later than the normally expected time (after the 13th month of life for the primary dentition and after the 7th year of life for the permanent dentition in humans)
delayed disocclusion nonstand: syn, DELAYED DISCLUSION

delayed disclusion \ˈdi-liˈdən divid-kloˈshən\: deferred separation of the posterior teeth as a result of the anterior guidance

delivery nonstand: syn, INSERTION, PLACEMENT

delta E (ΔE) \ˈdēl-tə eˈ\: total color difference computed by use of a color difference equation; it is generally calculated as the square root of the sums of the squares of the chromaticity difference and the lightness difference; it signifies the difference between a specimen and standard...

dental implant abutment • denture border
dental implant abutment \l'um plɔ̃t a-bœ̃t me̞n\; the supplemental component of a dental implant that is used to support and/ or retain any fixed or removable dental prosthesis; Editorial note for usage: an interim dental implant abutment (syn, healing abutment, temporary abutment), used with endosteal dental implants, is changed to alter abutment design before a definitive dental prosthesis is fabricated; a definitive dental implant abutment (syn, custom abutment, prefabricated abutment, stock abutment) is used to support and/or retain the definitive prosthesis; dental implant abutments are frequently described by their form (i.e., cylindrical, with diameter and height specifications), material (i.e., ceramic, titanium, zirconia ceramic), or special design factors (i.e., internal hex lock, external hex lock, spline)
dental implant abutment analog: a replica of the dental implant abutment platform, not intended for patient intraoral procedures
dental implant analog: a replica of the entire dental implant, not intended for human implantation
dental implant attachment \l'um plɔ̃t a-tach me̞n\: 1. the biochemical/mechanical interconnection between the dental implant and the connective tissue complex to which it is attached; 2. the biochemical/mechanical interconnection between the dental implant and the bone to which it is attached; 3. expression describing the mechanism for the retention of the dental implant abutment to the dental implant
dental implant loading: the process of placing axial or tangential force on a dental implant usually associated with the intentional exposure of the dental implant either at the time of initial surgical placement of the dental implant or subsequent to surgical exposure; such forces may come from any of a variety of sources including intentional and/or unintentional occlusal loading, unintentional forces from the tongue or other oral tissues, food bolus, as well as alveolar/osseous deformation; generally application of intentional occlusal forces may be termed immediate loading, progressive loading, or delayed loading; comp, AXIAL LOADING
dental implant system \l'um plɔ̃t sis'tem\ (1993): dental implant components that are designed to connect mechanically; an implant system can represent a specific concept, inventor, or patent; it consists of the necessary parts and instruments to complete the implant placement and abutment components
dental impression \l'dɛ̃t plɔ̃t im-prɛ̃ʃ ɛ̃n\: a negative imprint or a positive digital image display of intraroral anatomy; used to cast or print a 3D replica of the anatomic structure that is to be used as a permanent record or in the production of a dental restoration or prosthesis; syn IMPRESSION
dental impression wax \l'dɛ̃t plɔ̃t im-prɛ̃ʃ ɛ̃n wəks\: any thermoplastic wax used to make impressions for dental use
dental midline: the reference to a vertical line drawn through the tip of the incisal embrasure between the two maxillary central incisors and parallel to the vertical lines of the esthetic frame of the face; comp, FACIAL MIDLINE
dental pellicle: a film of salivary proteins that covers enamel soon after a tooth surface is cleaned; it is a component in diffusion of enamel minerals and in the attachment of primary bacterial colonizers
dental plaster \l'dɛ̃t plɔ̃ plas ter\: the beta-form of calcium sulfate hemihydrate; a fibrous aggregate of fine crystals with capillary pores that are irregular in shape and porous in character
dental prosthesis \l'dɛ̃t plɔ̃ prɔ̃s-thɛ̃ss\: an artificial replacement (prosthesis) of one or more teeth (up to the entire dentition in either arch) and associated dental/alveolar structures; dental prostheses usually are subcategorized as either fixed dental prostheses or removable dental prostheses; syn, FIXED DENTAL PROSTHESIS, REMOVABLE DENTAL PROSTHESIS; comp, MAXILLOFACIAL PROSTHESIS
dental prosthetic laboratory procedures \l'dɛ̃t plɔ̃ prɔ̃s-thɛ̃tk l'k lɒ̃b-ra-tɔ̃r e pra-se̞r ɛ̃z\: the steps in the fabrication of a dental prosthesis without the presence of the patient for their completion
dental senescence \l'dɛ̃t plɔ̃ sɛ̃n-sɛ̃z\: that condition of the teeth and associated structures in which there is deterioration as a result of aging or premature aging processes
dental shade selection: syn, TOOTH COLOR SELECTION
dental stone \l'dɛ̃t plɔ̃ stɔ̃n\: the alpha-form of calcium sulfate hemihydrate with physical properties superior to the beta-form (dental plaster); the alpha-form, \(\zeta\)-calcium sulfate hemihydrate, is created when the dihydrate of gypsum is heated under steam pressure resulting in the formation of dense rods or prisms, and is, therefore, more dense than the \(\beta\)-calcium sulfate hemihydrate (dental plaster); syn, GYPSUM
dentate \l'dɛ̃t tɛ̃t\: adj (1760): having teeth or pointed conical, anatomic projections of multi-layered, hard tissues; syn, DENTULOUS
dentin \l'dɛ̃t tin\: n (1840): a calcareous material similar to but harder and denser than bone that comprises the principle mass of the tooth; dentinal \l'dɛ̃t tɛ̃-nɛ̃l\: adj; also spelled dentine \l'dɛ̃t tên\:
dentin porcelain obs: syn, BODY PORCELAIN; comp, GINGIVAL PORCELAIN, INCISAL PORCELAIN, SHOULDER PORCELAIN
dentition \l'dɛ̃t-tʃiʃ ɒn\: n (1615): the teeth in the dental arch
dentofacial orthopedics \l'dɛ̃t to-fə̃ sə ər tha-pə̃ dɪkls\: the branch of dentistry that treats abnormal jaw and tooth relationships
dentoform \l'dɛ̃t to-fɔ̃m\: having the likeness of a tooth; a tooth-like substitute
dentogenics: a concept of using gender, personality, and age as factors in denture tooth arrangement and anatomy; orig, John (Jack) Pollard Frush and Roland D. Fisher, dentists, U.S.A.; comp, SMILE DESIGN
Frush JP, Fisher RD. How dentogenics interprets the personality factor. J Prosthet Dent 1956:6:441; “over characterization is artistically necessary because we are forced to use artificial media to create the illusion of reality”
dentulous \l'dɛ̃t cha-lus\: adj (1926): a condition in which natural teeth are present in the mouth; syn, DENTATE
denture \l'dɛ̃t chur\: n (1874): an artificial substitute for missing natural teeth and adjacent tissues; comp, COMPLETE DENTURE, DIAGNOSTIC DENTURE, DUPLICATE DENTURE, EXTENSION-BASE REMOVABLE PARTIAL DENTURE, FIXED PARTIAL DENTURE, IMMEDIATE DENTURE, INTERIM DENTURE, OVERDENTURE, PARTIAL DENTURE, PROVISIONAL DENTURE, ROTATIONAL PATH REMOVABLE PARTIAL DENTURE, TRANSITIONAL DENTURE, TREATMENT DENTURE, TRIAL DENTURE
denture adhesive \l'dɛ̃t chur əd-hɛ̃ siv\: a material used to adhere a denture to the oral mucosa
denture basal surface: syn, INTAGLIO; comp, DENTURE BASE
denture base \l'dɛ̃t chur bəs\: the part of a denture that rests on the foundation tissues and to which teeth are attached; comp, CHARACTERIZED DENTURE BASE, DEFINITIVE DENTURE BASE, TINTED DENTURE BASE
denture base material \l'dɛ̃t chur bəs mə-tir ɐl\: any substance of which a denture base may be made
denture bearing area: syn, DENTURE FOUNDATION
denture border \l'dɛ̃t chur bɔ̃ dr ɛ̃\: 1. the margin of the denture base at the junction of the cameo surface and the intaglio surface;
2. the peripheral border of a denture base at the facial, lingual, and posterior limits
denture characterization \děn ch confines hā’ak-ter-i-zā’shun\: modification of the form and color of the denture base and teeth to produce a more lifelike appearance
denture curing \děn ch kwy’or-ing\, nonstand: syn, DENTURE PROCESSING; comp, POLYMERIZATION
denture design \děn ch dī-zin\, obs: a planned visualization of the form and extent of dental prostheses arrived at after study of all factors involved (GPT-4)
denture esthetics \děn ch és-thë-tëk\: the effect produced by a dental prosthesis that affects the beauty and attractiveness of the person; syn, DENTOGENICS
denture flange \děn ch flänj\: the part of the denture base that extends from the cervical ends of the teeth to the denture border
denture flask: a metal or fiberglass vessel to support the gypsum mold used in the polymerization of a denture; comp, CASTING FLASK, COPE, CROWN FLASK, DRAG
denture foundation \děn ch foun-dā’shun\: the oral anatomy available to support a denture
denture occlusal surface \děn ch a-kloo’sā sūr fās\: the portion of the surface of a denture that makes contact with its antagonist
denture packing \děn ch pāk’ing\: nonstand: the act of pressing a denture base material into a refractory mold within a flask; syn, DENTURE RESIN PACKING
denture placement: syn, INSERTION, PLACEMENT
denture polished surface \děn ch pōl’ish\: obs: syn, CAMEO SURFACE
denture processing \děn ch pro-sës’ing\: 1. the means by which the denture base materials are polymerized to the form of a denture; 2. the conversion of the wax pattern of a denture or a portion of a denture into resin or other material
denture prognosis \děn ch prōg-nō’sēs\: an opinion or judgment given in advance of treatment for the prospects for success in the fabrication of dentures and for their usefulness (GPT-4)
denture prosthetics \děn ch prōs-thë-tëk\, obs: 1. the replacement of the natural teeth in the arch and their associated parts by artificial substitutes; 2. the art and science of the restoration of an edentulous mouth (GPT-4); syn, COMPLETE DENTURE PROSTHODONTICS
denture retainer: syn, RELINE; comp, TISSUE CONDITIONING
denture resin packing \děn ch réz’īn pāk’ing\: filling and pressing a denture base material into a mold within a refractory flask
denture retention \děn ch rī-tēn’shun\: 1. the resistance in the movement of a denture away from its tissue foundation especially in a vertical direction; 2. a quality of a denture that holds it to the tissue foundation and/or abutment teeth; comp, DENTURE STABILITY
denture service \děn ch sūr’vës\: the procedures that are involved in the diagnosis and subsequent fabrication and maintenance of artificial substitutes for missing natural teeth and associated structures
denture space \děn ch spās\: 1. the portion of the oral cavity that is or may be occupied by the maxillary and/or mandibular denture(s); 2. the space between and around the residual ridges that is available for dentures; 3. the area occupied by dentures where formerly the teeth, alveolar bone, and surrounding soft and hard tissues were located
denture stability \děn ch sta-bil’i-të\: 1. the resistance of a denture to movement on its tissue foundation, especially to lateral (horizontal) forces as opposed to vertical displacement (termed denture retention); 2. a quality of a denture that permits it to maintain a state of equilibrium in relation to its tissue foundation and/or abutment teeth; comp, DENTURE RETENTION
denture supporting area: syn, DENTURE FOUNDATION AREA
denture supporting structures \děn ch sa-pōr’ting strēk churz\: obs: the tissues (teeth and/or residual ridges) that serve as the foundation for removable partial or complete dentures (GPT-4)
denture surfaces: syn, DENTURE POLISHED SURFACE, POLISHED DENTURE SURFACE; comp, CAMEO SURFACE, INTAGLIO SURFACE
denture tooth: a term commonly referring to an artificial tooth used in the fabrication of a resin base prosthesis
denturism \děn ch ir-zum\: n: the fabrication and delivery of removable dentures by non-dentists
denturist \děn ch ist\, n (1965): anyone without an accredited dental school degree who makes, fits, and repairs removable dentures directly for the public
depassivation \dě-pās’sī-vā’shun\: n: loss of corrosion protection as a result of damage or removal of the protective oxide surface film on a passivated metal
deprogrammer \dě-prō-grā’mer\: n: various types of devices or materials used to alter the proprioceptive mechanism during mandibular closure
determinants of mandibular movement \dī-tūr’ma-nënt\: those anatomic structures that dictate or limit the movements of the mandible; the anterior determinant of mandibular movement is the dental articulation; the posterior determinants of mandibular movement are the temporomandibular articulations and their associated structures
detrusion \dě-trō’shun\: n: downward movement of the mandibular condyle
deuteranomalous vision \dōō’ter-a-nō’mə-ləs, dī-oō’-ter-a-nō’mə-ləs vīzh’on\: a form of anomalous trichromatism in which the viewer requires more green in a mixture of red and green to match spectral yellow than does a normal trichromat; the relative spectral visual sensitivity does not differ noticeably from normal; hue discrimination is poor in the red to green region of the spectrum
deuteranopia \dōō’ter-a-nō’pē-a, dī-oō’-nə (ca. 1901): green color blindness
developmental anomaly \dī-vēl’op-mēn’tl a-nō’mə-ləs\: unusual sequelae of development; a deviation from normal shape or size
developmental dysmorphia \dī-vēl’op-mēn’tl dĭs’mōr’fē-a\: anomaly of growth seemingly related to extrinsic interference from contiguous or adjacent structures
developmental dysplasia \dī-vēl’op-mēn’tl dĭs-plā’za-së-a\: any abnormality of growth or disharmony between parts as a result of growth
developmental hyperplasia \dī-vēl’op-mēn’tl hĭ’pər-plā’za\: excessive growth development
developmental hypoplasia \dī-vēl’op-mēn’tl hĭ’pō-plā’za\: diminution in growth development
devest \dī-vēst\, vb: the retrieval of a casting or prosthesis from an investing medium
development \dī’vē-a’shun\, n (15c): with respect to movement of the mandible, a lateral path of movement that ends in the centered position
device • direct metal laser sintering
device /dɪˈvaɪs/ n: something developed by the application of ideas or principles that are designed to serve a special purpose or perform a special function; most devices are intended for short term or special use; comp, CARRIER, CONFORMER, GUIDE, SPLINT, STENT
devitrification /dɪˈvɪtərɪˌfɪkʃən/ n: the process of transforming a glass into a crystalline material

diagnosis /dɪˌɡnəˈzaɪs/ n. (1832): the determination of the nature of a disease; diagnoses /dɪˌɡnəˈzez/ pl.
diagnostic /dɪˌɡnəˈstɪk/ adj (1625): relating to or used in diagnosis
diagnostic cast /dɪˌɡnəˈnɪstɪk kɑːst/ n (1625): a life-size reproduction of a part or parts of the oral cavity and/or facial structures for the purpose of study and treatment planning

diagnostic denture /dɪˌɡnəˈnɪstɪk dɛntʃʊr/ n: an interim removable dental prosthesis placed for the purpose of evaluation and planning later therapy

diagnostic denture wax-up /dɪˌɡnəˈnɪstɪk dɛntʃʊr wæks-up/ n: syn, TOOTH ARRANGEMENT, TRIAL DENTURE, WAX TRY-IN, WAXING, WAX TRIAL DENTURE
diagnostic index /dɪˌɡnəˈstɪk ɪnˈdɛks/ n: syn, PROSTHODONTIC DIAGNOSTIC INDEX

diagnostic mounting /dɪˌɡnəˈstɪk ˈmɔntɪŋ/ n: syn, MOUNTING
diagnostic occlusal adjustment /dɪˌɡnəˈstɪk əˈklʊsəl əˈdʒʌstmənt/ n: an evaluation of the process and implications of subtractive tooth preparation on articulator-mounted casts for the determination of the benefits and consequences of an occlusal adjustment

diagnostic prosthesis /dɪˌɡnəˈstɪk pɹəˈθɪsɪs/ n: a removable complete or partial denture, overdenture, or occlusal device, usually made of acrylic resin that may include an overlay of the occlusal surfaces designed to evaluate a patient’s response to extensive restorative intervention; syn, DIAGNOSTIC DENTURE, OCCLUSAL DEVICE
diagnostic radiation /dɪˌɡnəˈnɪstɪk ˈrɑːdɪəʃən/ n: the use of radiographs for the determination of the nature of a disease
diagnostic setups /dɪˌɡnəˈnɪstɪk ˈsɛpəs/ n: slang, syn, TOOTH ARRANGEMENT

diagnostic splint /dɪˌɡnəˈstɪk ˈsplɪnt/ n: syn, OCCLUSAL DEVICE
diagnostic study cast /dɪˌɡnəˈstɪk ˈstʌdɪ ˈkɑːst/ n: syn, DIAGNOSTIC CAST, PRELIMINARY CAST, PREOPERATIVE CAST
diagnostic tooth preparation /dɪˌɡnəˈstɪk tʌθ ˈprɛərəˈpɛərətɪv ˈkɑːst/ n: preparations on dental casts performed to evaluate and optimize definitive tooth preparations
diagnostic waxing /dɪˌɡnəˈstɪk ˈwæksɪŋ/ n: a waxing of intended restorative contours on dental casts for the purpose of evaluation and planning restorations; a wax replica of a proposed treatment plan; syn, WAX-UP; comp, TRIAL DENTURE

diarthrodial joint /dɪəˈθroʊdəl/ n: a freely moving joint
diarthrosis /dɪəˈθroʊrəsɪs/ n (1578): a specialized articulation permitting more or less free movement; a synovial joint
diastema /dɪəˈsteɪmə/ n (1854): a space between two adjacent teeth in the same dental arch; -mata /-maˈta/ pl

diathermy /dɪəˈθɜrmɪˈei/ n (1909): tissue resistance-generated heat resulting from high-frequency electric current
diatomic /dɪəˈtɒmɪk/ adj: a channel placed in the ridge lap surface of denture teeth to serve as a mechanical means of retaining the teeth in a chemically dissimilar denture base material
dichromatic vision /dɪˈkroʊˌmætɪk ˈvɪz̩ən/ n: defective color vision characterized by the absence of one of three cone pigments
dichromatism /dɪˌkroʊˈmætɪzəm/ n (1884): a form of defective color vision in which the spectrum is seen as comprising only two regions of different hues separated by an achromatic band; a color blindness with the perception of only two out of the three primary colors; it can be subdivided into three types: protanopia, deuteranopia, and tritanopia

dicom : acronym for DIGITAL IMAGING AND COMMUNICATIONS IN MEDICINE
die /dɪə/ n (14c): the positive reproduction of the form of a prepared tooth in any suitable substance
die relief /dɪə ˈrɪfl/ n: an agent applied to a die to provide space for the luting agent in the finished casting; syn, DIE SPACER
die spacer /dɪə ˈspæsər/ n: syn, DIE RELIEF
differential diagnosis /dɪˌfərəˈɛntʃəl ˌdɪˌɡnəˈzaɪsɪs/ n: the process of identifying a condition by comparing the signs and symptoms of all pathologic processes that may produce similar signs and symptoms
differential treatment planning /dɪˌfərəˈɛntʃəl trəˈmiːnt plənɪŋ/ n: the process of evaluating dentist-based and patient-based considerations in determining the most appropriate treatment from the field of alternatives, given the risk–benefit estimation for the patient
digital denture nonstandard /dɪˈɡɪtl dɛntʃʊr nənˈstændərd/ n: commonly refers to a removable complete denture created with automation by using CAD, CAM, and CAE in lieu of conventional processes; a removable partial denture may also be digitally fabricated; Editorial note for usage: a denture is not a digital device; syn, DIGITALLY FABRICATED DENTURE, comp, PROSTHESIS, REMOVABLE COMPLETE DENTURE, REMOVABLE PARTIAL DENTURE
digital imaging and communications in medicine (DICOM): a standard for storage and distribution of medical images. It includes a compressible file format definition for communication of images over networks; DICOM enables the archiving system
digital impression /dɪˈɡɪtl ɪmpəˈrɪʃən/ n: slang, Editorial note for usage: a digital impression is not a negative likeness or copy in reverse of the surface of an object; syn, DIGITAL SCAN
digital scan /dɪˈɡɪtl skæn/ n: 1. capturing the computer numerical format of raster images (bitmap) of a geometric object that can be viewed on a monitor screen (two-dimensional [2D]) or hologram (3D); 2. in dentistry, capturing the optical image directly of the patient’s anatomy or indirectly of a definitive cast of the anatomy
digitally fabricated denture /dɪˈɡɪtl əˌfərəˈɛntʃəl dɛntʃʊr/ n: a removable complete or partial denture created with automation by using CAD, CAM, and CAE in lieu of conventional processes; comp, PROSTHESIS, REMOVABLE COMPLETE DENTURE, REMOVABLE PARTIAL DENTURE
dilaceration /dɪˈlæsərəˈɛʃən/ n: 1. a tearing apart; 2. in dentistry, a condition resulting from injury to a tooth during its development and characterized by a band or crease at the junction of the crown and root, or alternatively, by tortuous roots with abnormal curvatures
dimensional stability /dɪˈmɛnʃən ʃəlˈɪstəl/ n: the ability of a material to retain its size and form
dimensions of color /dɪˈmɛnʃənz əv kələr/ n: terms used to describe the three dimensional nature of color; in the Munsell color order system, the dimensions are named hue, value, and chroma, which are used to describe the color family (hue), the lightness/darkness (value), and the saturation (chroma)
direct bone impression /dɪˈrekt bən ɪmˈprɛʃən/ n: a negative likeness of bone from which overlying tissues have been reflected
direct lift technique /dɪˈrekt lɪft ˈtekniːk/ n: a means of fabricating porcelain labial margins whereby porcelain is condensed directly onto the die; comp, PORCELAIN WAX TECHNIQUE
direct metal laser sintering /dɪˈrekt mɛlər ˈlɑːsər ˈsɪntərɪŋ/ n: acronym is DMLS; an additive CAM technique which uses a sintering of metal alloy powder to develop 3D objects; comp, SELECTIVE LASER MELTING, SELECTIVE LASER SINTERING
**direct pulp capping** 
application of a material to exposed vital pulpal tissue to protect it and promote healing

**direct retainer** 
that component of a removable partial denture used to retain and prevent dislodgment, consisting of a clasp assembly or precision attachment

**direct retention** 
retention obtained in a removable partial denture by the use of clasps or attachments that resist removal from the abutment teeth

**disarticulation** 
separation of joint parts

**disc** 
with respect to the temporomandibular joint, the avascular intra-articular tissue

**disc-condyle complex** 
the condyle and its disc articulation that functions as a simple hinge joint

**disc degeneration** 
degenerative changes in the temporomandibular joint articular disc

**disc derangement** 
development of the disc beyond its normal position on mandibular movement, usually accompanied by a clicking sound

**disc displacement**

- **without reduction** 
disc displacement in which the temporomandibular joint disc is displaced at rest (usually in an anterior-medial direction) but does not resume a normal position on mandibular movement
- **with reduction** 
disc displacement in which the temporomandibular joint disc is displaced at rest and does not resume a normal position on mandibular movement; used to indicate that component of a removable partial denture by the use of clasps or attachments that resist removal from the abutment teeth

**disc detachment**

- **capsular**
- **ligamentous**
- **osseous attachments**

**disc dislocation**

- **partial**
- **condylar**
- **functional**

**condylar dislocation** 
fracture of a bone near an articulation, with displacement of the condyloid process out near an articulation, with displacement of the condyloid process out

**distal** 
adj (1808): remote; farther from the point of reference; away from the median sagittal plane of the face following the curvature of the dental arc

**dislocation of the mandible** 
fracture of one or more bones at a joint

**disocclusion**

- **immediate**
- **disclusion**
- **delayed**

**disocclusion**

- **immediate**
- **disclusion**
- **delayed**

**distant occlusion**

- **conclusion**
- **delayed**

**distory**

- **conclusion**
- **delayed**

**distributor bar**
eponym for one of many bar attachments that splint teeth or dental implants together while acting as an abutment for removable partial and complete dentures; the bar is straight with a round top; the sleeve or clip that attaches to the capsule, ligaments, or bone

**discal ligaments**

- **medial**
- **lateral**

**discectomy** 
excision of the intra-articular disc

**disclude** 
separate opposing teeth during eccentric movements of the mandible

**disclusion** 
separation of opposing teeth during eccentric movements of the mandible

**disocclusion**

- **immediate**
- **disclusion**
- **delayed**

**dovetail**

- **back-to-back**

**docking device**

- **radiation cone locator**

**Dolder bar**
eponym for one of many bar attachments that splint teeth or dental implants together while acting as an abutment for removable partial and complete dentures; the bar is straight with a round top; the sleeve or clip that fits over the bar gains retention by friction only; the bar may be of variable size and is pear-shaped in cross section, as is its accompanying sleeve; this clip allows for some measure of rotational movement about the bar and, therefore, is a resilient anchor attachment; orig. Eugene J. Dolder, prosthodontist, Switzerland

**donor site**

- **area of the body from which a graft is taken**

**dopant**

element incorporated into a dental material to alter its mechanical properties; e.g., yttria incorporated in small amount into zirconia, resulting in stabilization

**double lip**

- **hyperplasia**

**double wire clasp**

- **back-to-back**

**dovetail**

- **circular**

**disjunct**

- **component**

**dislocation of fracture** 
fracture of a bone near an articulation, with displacement of the condyloid process out

**dislocation** 
fracture of one or more bones at a joint; comp. CONDYLAR DISLOCATION, FUNCTIONAL DISLOCATION, MANDIBULAR DISLOCATION, PARTIAL DISLOCATION

**disclusion**

- **immediate**
- **disclusion**
- **delayed**

**disocclusion**

- **immediate**
- **disclusion**
- **delayed**

**distant occlusion**

- **conclusion**
- **delayed**

**distributor bar**
eponym for one of many bar attachments that splint teeth or dental implants together while acting as an abutment for removable partial and complete dentures; the bar is straight with a round top; the sleeve or clip that attaches to the capsule, ligaments, or bone

**discal ligaments**

- **medial**
- **lateral**

**discectomy** 
excision of the intra-articular disc

**disclude** 
separate opposing teeth during eccentric movements of the mandible

**disclusion** 
separation of opposing teeth during eccentric movements of the mandible

**disclusion**

- **immediate**
- **disclusion**
- **delayed**

**dovetail**

- **circular**

**disjunct**

- **component**

**dislocation of fracture** 
fracture of a bone near an articulation, with displacement of the condyloid process out

**dislocation** 
fracture of one or more bones at a joint; comp. CONDYLAR DISLOCATION, FUNCTIONAL DISLOCATION, MANDIBULAR DISLOCATION, PARTIAL DISLOCATION

**disclusion**

- **immediate**
- **disclusion**
- **delayed**

**disocclusion**

- **immediate**
- **disclusion**
- **delayed**

**distant occlusion**

- **conclusion**
- **delayed**

**distributor bar**
eponym for one of many bar attachments that splint teeth or dental implants together while acting as an abutment for removable partial and complete dentures; the bar is straight with a round top; the sleeve or clip that attaches to the capsule, ligaments, or bone

**discal ligaments**

- **medial**
- **lateral**

**discectomy** 
excision of the intra-articular disc

**disclude** 
separate opposing teeth during eccentric movements of the mandible

**disclusion** 
separation of opposing teeth during eccentric movements of the mandible

**disclusion**

- **immediate**
- **disclusion**
- **delayed**

**dovetail**

- **circular**
dowel • edentulous
dowel \dou\-\al\ n, obs, nonstand (13c): syn, POST
dowel core crown n, obs, nonstand: syn, RICHMOND CROWN
dowel crown n, obs, nonstand: syn, DAVIS CROWN, RICHMOND CROWN
dowel pin \dou'\al\ pin\: a metal pin used in stone casts to remove
die sections and replace them accurately in the original position
drag \dr\ag\ r: the lower or cast side of a refractory flask to which
the cope is fitted
draw \dr\av\ vt, slang (bef. 12c): the taper or convergence of walls of a
preparation for a restoration; syn, path of draw, PATH OF INSERTION,
PATH OF WITHDRAWAL, PATH OF PLACEMENT, TOTAL OCCLUSAL
CONVERGENCE
dross \dr\os\, dr\os\ r: 1. the solid scum formed on the surface of a
metal when molten or melted, often formed from oxides of various
metals but sometimes arising from impurities and waste materials;
2. waste matter; refuse
ductility \d\u\k-t\i-t\i-t\e\-\n: the ability of a material to withstand
permanent deformation under a tensile load without rupture; ability
of a material to be plastically strained in tension; a material is brittle
if it does not have appreciable plastic deformation in tension before
rupture
duplicate denture \d\o\o\-p\l\i-k\d\t\e\n\: a second denture intended
to be a replica of the first
durometer \d\o\o\o\-\r\o\m\-t\i-t\e\r\: an instrument for measuring hardness
of elastic materials (i.e., polymers, biological tissues); measured by
scales A (softer) to D (harder) with each scale value of 0 (softest)
to 100 (hardest); ASTM D2240; syn, Shore Hardness Scale orig.
Albert F. Shore, inventor, U.S.A., 1908
dwt: abbr [denarius + weight] pennyweight; a measurement of
weight in the troy system equal to 24 grains, or 0.05 ounce; its
metric equivalent is 1.555 grams
dye \d\i\ n: a colorant that does not scatter light but absorbs certain
waves and transmits others
dynamic bite opener slang: syn, OCCLUSAL DEVICE
dynamic relations \d\i\m\-\n\: obs: relations of two objects
involving the element of relative movement of one object to
another, as the relationship of the mandible to the maxillae (GPT-4)
dynamic splint: syn, INTERARCH EXPANSION DEVICE, OCCLUSAL
DEVICE
dysesthesia \d\i\f\-\e\-\s\-\t\e\-\n, -\f\h\-\a, -s:\ r: an unpleasant abnormal
sensation
dysfunction \d\i\f\-\f\u\n\-\k\-\n\: ca. 1916): the presence of func-
tional disharmony between the morphologic form (teeth, occlusion,
bones, joints) and function (muscles, nerves) that may result in
imperfection in swallowing
dysgeusia \d\i\f\-\g\u\o\-\n, -\f\h\-\a\ n: any disturbance in the sense of
taste
dyskinesia \d\i\f\-\k\i\n\-\i\s\-\n, -\f\h\-\a\ n: ca. 1706): impairment of the
power of voluntary movement resulting in fragmentary or incom-
plete movement; comp, INCOORDINATION
dysplasia \d\i\f\-\p\l\a\-\n\: ca. 1923): abnormality of develop-
ment; comp, MANDIBULAR DYSPLASIA, MAXILLOMANDIBULAR
DYSPLASIA
dystonia \d\i\f\-\t\o\n\-\y\-\n\: acute irregular tonic muscular spasms, often
with contractions of the tongue, jaw, eyes, neck, and sometimes the
total body
dye \d\i\ f\i\-\n: a colorant that does not scatter light but absorbs certain
waves and transmits others
dynamic bite opener slang: syn, OCCLUSAL DEVICE
dynamic relations \d\i\m\-\n\: obs: relations of two objects
involving the element of relative movement of one object to
another, as the relationship of the mandible to the maxillae (GPT-4)
dynamic splint: syn, INTERARCH EXPANSION DEVICE, OCCLUSAL
DEVICE
dysesthesia \d\i\f\-\e\-\s\-\t\e\-\n, -\f\h\-\a, -s:\ r: an unpleasant abnormal
sensation
dysfunction \d\i\f\-\f\u\n\-\k\-\n\: ca. 1916): the presence of func-
tional disharmony between the morphologic form (teeth, occlusion,
bones, joints) and function (muscles, nerves) that may result in
imperfection in swallowing
dysgeusia \d\i\f\-\g\u\o\-\n, -\f\h\-\a\ n: any disturbance in the sense of
taste
dyskinesia \d\i\f\-\k\i\n\-\i\s\-\n, -\f\h\-\a\ n: ca. 1706): impairment of the
power of voluntary movement resulting in fragmentary or incom-
plete movement; comp, INCOORDINATION
dysplasia \d\i\f\-\p\l\a\-\n\: ca. 1923): abnormality of develop-
ment; comp, MANDIBULAR DYSPLASIA, MAXILLOMANDIBULAR
DYSPLASIA
dystonia \d\i\f\-\t\o\n\-\y\-\n\: acute irregular tonic muscular spasms, often
with contractions of the tongue, jaw, eyes, neck, and sometimes the
total body
E
earbow \\r\-\b\-\  n (20c): a type of facebow that indexes to the
external auditory meatus and registers the relation of the maxillary
dental arch to the external auditory meatus and a horizontal refer-
ence plane; this instrument is used to transfer the maxillary cast to
the articulator; it provides an average anatomic dimension between
the external auditory meatus and the horizontal axis of the
mandible; syn, FACEBOW
early closing click \\r\-\l\-\ e\k\s\-\i\s\-\n\k\k\: a click emanating from the
temporomandibular joint that occurs at the initiation of retractive
translation
early mandibular lateral translation \\r\-\l\-\ e\m\n\-\n\-\d\i\b\-\y\-\a\-\l\r\: the translatory portion of lateral movement in which the greatest
portion occurs early in the forward movement of the nonworking-
side condyle as it leaves centric relation; comp, IMMEDIATE
MANDIBULAR LATERAL TRANSLATION, MANDIBULAR TRANSLATION,
PROGRESSIVE MANDIBULAR LATERAL TRANSLATION
early opening click \\r\-\l\-\ e\o\n\-\p\-\n\-\n\k\k\: a temporomandibular
joint click that occurs at initiation of the translation of the condyle(s)
EBA cement: acronym for ethoxybenzoic acid cement; reinforced
zinc oxide-eugenol cement with part of the eugenol replaced by 2-
ethoxybenzoic acid
eccentric \\i\k\-\s\-\n\-\t\i\k\ \adj (14c): 1. not having the same center; 2.
deviating from a circular path; 3. located elsewhere than at the
geometric center; 4. any position of the mandible other than that
which is its normal position
eccentric checkbite nonstand: syn, ECCENTRIC INTEROCCLUSAL
RECORD
eccentric interocclusal record \\i\k\-\s\-\n\-\t\i\k\l\n\-\n\ \i\n\r\k\ \e\d\: a registration of any maxillomandibular position other than centric
relation
eccentric jaw record: syn, ECCENTRIC INTEROCCLUSAL RECORD
eccentric jaw relation \\i\k\-\s\-\n\-\t\i\k\j\o\l\-\l\i\l\-\a\ \n\-\n\ \i\n\r\k\ \e\d\: any relationship of the mandible to the maxillae other than centric relation (GPT-4)
eccentric occlusion \\i\k\-\s\-\n\-\t\i\k\l\ \-\a\ \a\-\l\o\ \n\-\n\ \i\n\r\k\ \e\d\: an occlusion other than maximal intercuspal position
eccentric position: syn, ECCENTRIC RELATION
eccentric record: syn, ECCENTRIC INTEROCCLUSAL RECORD
eccentric relation \\i\k\-\s\-\n\-\t\i\k\l\-\l\-\n\ \i\n\r\k\ \e\d\: any relationship of the
mandible to the maxillae other than centric relation; comp,
MAXIMAL INTERCUSPAL POSITION
ectopic \\i\k\-\t\o\p\-\n\-\n\ \i\n\r\k\ \e\d\ \-\b\-\ \adv (1873): occurring in an abnormal position or
in an unusual manner or form; ectopically \\i\k\-\t\o\p\-\n\-\n\ \i\n\r\k\ \e\d\ \-\b\-\ \adv
ectopic eruption \\i\k\-\t\o\p\i\k\ \i\-\r\-\p\-\n\-\n\-\n\ \i\n\r\k\ \e\d\ \-\b\-\ \adv (1998): the state of being edentu-
lus; without natural teeth
edentulous \\i\-\d\e\n\-\n\-\n\-\n\ \i\n\r\k\ \e\d\ \-\b\-\ \adv (1782): without teeth, lacking teeth
edge-to-edge articulation: the opposing anterior teeth meet along their incisal edges; in which the teeth are in maximal intercuspal position.

edge-to-edge bite: nonstand.; syn., EDGE-TO-EDGE ARTICULATION.

edge-to-edge occlusion: syn., EDGE-TO-EDGE ARTICULATION.

eduionally qualified prosthodontist: the American Board of Prosthodontics, a prosthodontist who has successfully completed an advanced educational program accredited by the Commission on Dental Accreditation and is eligible to apply for examination by the American Board of Prosthodontics.

elastic: susceptible to being stretched, compressed, or distorted and then tending to resume the original shape.

elastic limit: the greatest stress to which a material may be subjected and still be capable of returning to its original dimensions when such forces are released.

elastic modulus: the stiffness or flexibility of a material within the elastic range; within the elastic range, the material deforms in direct proportion to the force applied as represented by Hooke’s law.

elasticity: the quality that allows a structure or material to return to its original form on removal of an external force; comp., MODULUS OF ELASTICITY.

elastomer: a polymer that has a glass transition temperature that is below its service temperature (usually room temperature); these materials are characterized by low stiffness and extremely large elastic strains; elastomeric.

elastomeric impression material: a group of flexible chemical polymers that are either chemically or physically cross-linked; generally, they can be easily stretched and rapidly recover their original dimensions when applied stresses are released.

electrical discharge machining: the process by which metal(s) is (are) altered in form by using electrical current through conductive objects brought into physical contact with the metal surface; a precision metal removal process using an accurately controlled electrical discharge (a spark) to erode metal, usually performed in a liquid dielectric medium; syn., SPARK EROSION.

electrode: a medium used between an electric conductor and the object to which it is to be applied; an x-ray tube component from which electrons emanate or to which electrons may be subjected and still be capable of returning to its original form.

electromagnetic: the range of energy waves that extend from gamma rays to radio waves; the eye is sensitive to a very narrow band of wavelengths between about 380 and 760 nm.

electromagnetic wave: a disturbance that propagates outward from any electric charge that oscillates or is accelerated; far from the charge, it consists of vibrating electric and magnetic fields that move at the speed of light and are at right angles to each other and to the direction of motion.

electromyographic biofeedback: an instrumental process that helps patients learn control over muscle tension levels previously under automatic control.

electromyography: the graphic recording of the electrical potential of muscle; comp., NOCTURNAL ELECTROMYOGRAPHY.

electron: the elementary unit of electricity; a stable elementary particle that is the negatively charged constituent of ordinary matter, having a mass of approximately 9.11 × 10^-28 g (equivalent to 0.511 MeV) and a charge of approximately −1.602 × 10^-19 coulomb; comp., negative electron, negatron.

electron accelerator: a device used in radiation treatment that accelerates electrons to high energies.

electron beam therapy: treatment by electrons accelerated to high energies by a machine such as the betatron.

electron volt: a unit of energy equal to the energy acquired by an electron when it passes through a potential difference of 1 volt in a vacuum; it is equal to (1.602192 × 0.000007) × 10^-19 volt.

electroplating: the process of covering the surface of an object with a thin coating of metal by means of electrolysis.

electropolishing: the electrolytic removal of a thin layer of metal to produce a bright surface.

elements: the materials that, when used in reference to dental implants, component parts of a dental implant structure, such as the dental implant, dental implant abutment, and abutment screw.

embolus: one of the muscles that, on contracting, elevates or closes the mandible.

elevation angle: the angle between the contour of a tooth or cusp and the line of occlusion.

EMG: acronym for ELECTROMYOGRAPHY.

eminence: an anatomic prominence or projection, especially one on the surface of a bone; comp., CANINE EMINENCE, ARTICULAR EMINENCE.

empty mouth movement: voluntary or reflex movements of the mandible when not engaged in incision or mastication.

enamel: the outermost layer of calcified substance that envelopes and protects the dentin of the coronal aspect of the tooth; it is the hardest substance in the body; syn., adamantine layer.
enamel projection • equilibrate

enamel projection V-ña’m el proj’é-kshun\': an apical extension of enamel, usually toward a furcation in the roots.

enameloplasty n: syn OCCLUSAL RESHAPING, ESTHETIC RESHAPING

enarthrosis lén’är-thró sís, n (1634): joints characterized with a ball and socket anatomy (e.g., hip)

endodontic-endosteal dental implant lén’dó-dón’tiks én-dōs’s-tē-l děn’tl im-plánt\’ obs: a smooth and/or threaded pin implant that extends through the root canal of a tooth into periapical bone and is used to stabilize a mobile tooth; syn, endodontic stabilizer

endodontic implants obs syn, ENDODONTIC-ENDOSTEAL DENTAL IMPLANT

endodontic pin lén’dó-dón’tik pín, obs syn, ENDODONTIC-ENDOSTEAL DENTAL IMPLANT

endodontic stabilizer obs syn, ENDODONTIC-ENDOSTEAL DENTAL IMPLANT

endogenous lén-dó’j-a-nus\’ adj (1830): developing or originating within the organism

endoscope lén’də-skıp\’ n (1861): a flexible or rigid thin tube used for examining the interior of a structure

endosseous blade implant: syn, BLADE ENDOSTEAL DENTAL IMPLANT

endosseous implant: syn, ENDOSTEAL DENTAL IMPLANT

endosteal dental implant lén’dó-dón’tē-l děn’tl im-plánt\’ a device placed into the alveolar and/or basal bone of the mandible or maxillae and transecting only one cortical plate; the endosteal dental implant is composed of an anchorage component, termed the endosteal dental implant, which, ideally, is within the bone, and a retentive component, termed the endosteal dental implant abutment; the dental implant abutment connects to the dental implant (by means of screws, thread/screw interfacing, compression/luting agent, etc., which can be termed elements), passes through the oral mucosa, and serves to support and/or retain the prosthesis (fixed prosthesis, removable prosthesis, maxillofacial prosthesis); descriptions of the dental implant and/or the dental implant abutment that use silicone or geometric forms, such as cylinder, conical, pre-angled, angled, blade, basket, or endodontic, may be used as adjectives to enhance understanding of the geometry of any endosteal dental implant; descriptive adjectives may be used to delineate the materials from which they are made, such as, a ceramic dental implant abutment. Interim or definitive dental implant abutments may be composed of one or more individual component parts, each of which is termed an element; the dental implant abutment element(s) usually is (are) described by means of their geometric form, function or means of adaptation, such as, screw, coping, cylinder, lug, friction fitting, press-fit; hence, multiple adjectives may be used to describe both the endosteal dental implant and abutment; comp, BASKET ENDOSTEAL DENTAL IMPLANT, BLADE ENDOSTEAL DENTAL IMPLANT, DENTAL IMPLANT, ENDODONTIC ENDOSTEAL DENTAL IMPLANT, EPOSTEAL DENTAL IMPLANT, SCREW ENDOSTEAL DENTAL IMPLANT, TRANOSTEAL DENTAL IMPLANT

endosteal dental implant abutment lén’dó-dón’s-tē-l děn’tl im-plánt a-bút’ ment\’ (1998): that element of the dental implant that passes through the oral mucosa and provides connection between the endosteal dental implant body and the prosthesis; the dental implant abutment may be for interim or definitive application; comp, interim abutment, definitive abutment

endosteal dental implant abutment elements lén’dó-dón’s-tē-l děn’tl im-plánt a-bút’ ment ēl’a-menťs (1998): any component used to secure either the dental implant abutment to the dental implant or the prosthesis to the dental implant abutment; comp, ELEMENTS

engram: synaptic maps in the motor cortex for skilled, somatic movement patterns; orig, John Hughlings Jackson, 1884

entrance port lén-träns port\’ the area of the surface of a patient on which a radiation beam is incident

enucleation n: The surgical removal of the eye globe after severing the optic muscles and optic nerve

envelope of function lén’va-lıp ūv fûŋk’shun\’ the 3D space contained within the envelope of motion that defines mandibular movement during masticatory function and/or phonation; comp, ENVELOPE OF MOTION, POSSELT’S ENVELOPE OF MOTION

envelope of motion lén’va-lıp ūv mö’shun\’ the 3D space circumscribed by mandibular border movements within which all unstrained mandibular movement occurs; ENVELOPE OF MOTION is known as Posselt’s Envelope of Motion, orig. Ulf Posselt who first demonstrated this 3D space, Denmark, 1952

Posselt U. Physiology of occlusion and rehabilitation. Philadelphia, PA: Davis; 1962

epithelial attachment: syn, JUNCTIONAL EPITHELIUM

epithelial cuff lén-p’a-thé’le-al kūf\’ a term used to describe the relationship between the mucosa and the dental implant and/or dental implant abutment; the use of this term implies a close adherence, but not necessarily a biochemical attachment, between the implant and mucosa

epithelium lén-p’a-thé’l-i-um\’ n (1748): the mucosal tissue serving as the lining of the intraoral surfaces. It extends into the gingival crevice and adheres to the tooth at the base of the crevice; -l i-a \ vé-lē-a’ pl, comp, JUNCTIONAL EPITHELIUM, SULCULAR EPITHELIUM

epithelization lén-p’a-thé’l-i-zā’shun\’ n (ca. 1934): the process of becoming covered with or converted to epithelium; epithelize lén-p’a-thé’lī z

epseostal dental implant lén-p’ös’tē-al děn’tl im-plánt\’ any dental implant that receives its primary support by means of resting upon the bone; Editorial note for usage: a subperiosteal dental implant that conforms to the superior surface of an edentulous area of alveolar bone is an epseostal dental implant; any retaining screws or other elements that may secure the epseostal framework to the alveolar bone and pass through the bone represent endosteal dental implant components; should the epseostal framework penetrate the alveolar bone, technically, the framework becomes an endosteal dental implant; an epseostal dental implant's support system has, heretofore, been termed the implant frame, implant framework, or implant substructure; this is an integral component of that dental implant's form and is not subservient to any other component; comp, ENDOSTEAL DENTAL IMPLANT, SUBPERIOSTEAL DENTAL IMPLANT, TRANSEOSTEAL DENTAL IMPLANT

epoxy resin lén-p’ōk’ sē, l-pōk’ -rē-zē’ in’s: a resin characterized by the reactive epoxy or ethoxylaine groups that possess unique characteristics in terms of adhesion to metals, woods, and glasses

epoxy resin die lén-p’ōk’ sē, l-pōk’ -rē-zē’ in’s dū the reproduction in the form of epoxy resin of the prepared surfaces of a tooth or dental implant abutment

epulis fissuratum: overgrowth of intraoral tissue resulting from chronic irritation

equalization of pressure V-kw’il-a-žā’shun ūv prēsh’ur\’ the act of equalizing or uniformly distributing pressure

equilibrate V-kw’il-a-brait\’ vb (1635): to bring or to place in equilibrium; -brated t brait\’ ; -brating bra’ting\’ vt
equilibration /ɪˈkwɪlɪˈreɪʃən/ n (1635): 1. the act or acts of placing a body in a state of equilibrium; 2. the state or condition of being in equilibrium; comp, MANDIBULAR EQUILIBRATION, OCCLUSAL EQUILIBRATION

equilibrator /ɪˈkwɪlɪˌbreɪtər/ n (19c) obs: an instrument or device used in achieving or helping maintain a state of equilibrium (GPT-4)

equilibrium /ɪˈkwɪlɪbɹəm/ n (1608): 1. a state of even adjustment between opposing forces; 2. that state or condition of a body in which any forces acting on it are so arranged that their product at every point is zero; 3. a balance between active forces and negative resistance

erosion /ɪˈrəʊʃən/ n (1541): 1. an eating away; a type of ulceration; 2. in dentistry, the progressive loss of tooth substance by chemical processes that do not involve bacterial action, producing defects that are wedge-shaped depressions often in occlusal, facial and gingival areas; comp, ABFRACTION, ABRASION, ATRICTION, NON-CARIOUS CERVICAL LESION

Essig splint: eponym for a stainless steel wire passed labially and lingually around a segment of the dental arch and held in position by individual ligature wires around the contact areas of the teeth; it is used to stabilize fractured or repositioned teeth and the involved alveolar bone; variously ascribed to V. H. Jackson, dentist, NY, U.S.A., C. J. Essig and N. S. Essig, dentists, PA, U.S.A., or W. H. Atkinson, dentist

esthetic /ɛˈstɛθɪk/ adj: 1. pertaining to the study of beauty and the beautiful; descriptive of a specific creation that results from such study; objectifies beauty and attractiveness, and elicits pleasure; 2. pertaining to sensation; esthetically adj; syn, aesthetic

esthetic frame of the face: the area on the human face, within which items of esthetic interest such as midlines, cants, and smile parameters are sensitively perceptible and objectively verifiable

esthetic reshaping /ɛˈstɛθɪk rɛ-ʃæpɪŋ/ the physical modification of the surfaces of teeth to improve appearance; comp, AXIAL REDUCTION, OCCLUSAL REDUCTION

esthetics /ɛˈstɛθɪsɪks/ n (1798): 1. the branch of philosophy dealing with beauty; 2. in dentistry, the theory and philosophy that deal with beauty and the beautiful, especially with respect to the appearance of a dental restoration, as achieved through its form and/or color; those subjective and objective elements and principles underlying the beauty and attractiveness of an object, design, or principle; comp, DENTAL ESTHETICS, DENTOGENICS, DENTURE ESTHETICS

Estlander's operation: eponym for a lip switch operation; a triangular flap of tissue taken from the lower lip is transferred to the upper lateral lip; orig, Jakob August Estlander, surgeon, Finland, 1831-1881

etch /ɛtʃ/ vb, vt (1634): 1. to produce a retentive surface; in dentistry on tooth enamel, glass or metal; admodem corrosive action of an acid (etchant) to create a retentive surface; 2. to delineate or impress clearly

2etch /ɛtʃ/ n (1896): the effect or action of an etching acid on a surface

etchant /ɛtʃˈænt/ n: a chemical agent that is capable of selective dissolution of a surface

etching /ɛtʃˈɪŋ/ vt (1632): 1. the act or process of selective dissolution; 2. in dentistry, the selective dissolution of the surface of tooth enamel, dentin, metal, or porcelain through the use of acids or other chemical agents (etchants) to create a retentive surface

ethylene oxide /ɛθənˈi-loʊd/ a bactericidal agent occurring as a colorless gas with a pleasant ethereal odor; the chemical in gas sterilization systems used for many items that cannot be sterilized in a high heat system

etiologic factors /eˌteɪ-ə-lojɪk/ the elements or influences that can be assigned as the cause or reason for a disease; comp, LOCAL ETIOLOGIC FACTORS, SYSTEMIC ETIOLOGIC FACTORS

etiology /eɪˈtɪoli-ə-jeɪ/ n (1555): 1. the factors implicated in the cause or origin of a disease or disorder; 2. the study or theory of the factors causing disease

evidence-based dentistry: acronym is EBD; an approach to oral healthcare that requires the judicious integration of systematic assessments of clinically relevant scientific evidence, relating to the patient's oral and medical condition and history, with the dentist's clinical expertise and the patient's treatment needs and preferences; American Dental Association, 2001

evisceration /ˌviːzɪ-ərəˈʃən/ n: 1. removal of the viscera or contents of a cavity; 2. in ophthalmology, the removal of the contents of the eye globe, but leaving the sclera

evulsion /ˈnuːvələs/ n (1611): extraction; removed, usually of a sudden nature

examination /ˌɛksəˈmeɪnərən/ n (14c): scrutiny or investigation for the purpose of making a diagnosis or assessment

excorate /ˈɛksərət/ vb: to wear off the skin; to abrade

excoriation /ˌɛksərəˈʃən/ n: a scratch or abrasion of the skin

excursion /ˌɛksəˈkʃərn/ n (1777): 1. a movement outward and back or from a mean position or axis; also, the distance traversed; 2. in dentistry, the movement occurring when the mandible moves away from maximal intercuspal position

excursive /ˈɛksər-sɪv/ adj (1673): constituting a digression; characterized by digression

excursive movement /ˈɛksər-sɪv məʊvənt/ n: movement occurring when the mandible moves away from maximal intercuspal position

exenteration /ˌɛksətərəˈʃən/ n: 1. removal of an organ; 2. used in connection with the eye, an orbitoexenteration denotes the removal of the entire eye globe and surrounding structures; comp, EVISCERATION

exostosis /ɛksəˈtɒsɪs/ n: bony projection extending beyond the normal contour of a bony surface

expansion prosthesis /ɪkˈspænʃən prəʊˈθɛsɪs/ a maxillofacial prosthesis used to expand the lateral segment of the maxillae in a unilateral or bilateral cleft of the soft and hard palates and alveolar processes; comp, NASOALVEOLAR MOLDING

explant /ɛkˈpleɪnt/ vb: to extract a dental implant

exposure /ɪkˈspɔːrən/ n (1606): 1. the act of laying open, as a surgical or dental exposure; 2. in radiology, a measure of the roentgen rays or gamma radiation at a certain place based on its ability to cause ionization; the unit of exposure is the roentgen (R); comp, RAD

extension /ɪkˈstrɛnʃən/ n (15c): 1. the movement by which the two elements of any jointed part are drawn away from each other, the process of increasing the angle between two skeletal levers having end-to-end articulation with each other; the opposite of flexion; 2. in maxillofacial prosthetics, that portion of a prosthesis added to fill a defect or provide a function not inherent in a dental restoration, e.g., palatal extension, pharyngeal extension; comp, CONFORMER, SECTION
extension-base removable partial denture • facial prosthesis

extension-base removable partial denture: a removable partial denture that is supported and retained by natural teeth anterior to the denture base and in which a portion of the functional force vector of the base is carried by the residual ridge; syn, REMOVABLE PARTIAL DENTURE

extension bridge: a bridge that is supported and retained by natural teeth anterior to the denture base and in which a portion of the functional force vector of the base is carried by the residual ridge; syn, REMOVABLE PARTIAL DENTURE

extension outline: the outline form of the face from an anterior view, sometimes described geometrically as square, tapering, ovoid, or by various combinations

extracapsular disorder: because of rigidity of any structure external to the joint capsule

extracapsular ankylosis: because of rigidity of any structure external to the joint capsule

extracapsular disorder: a problem associated with the masticatory system in which the etiological factors are located outside of the temporomandibular joint capsule

extracoronal attachment: any attachment that which is outside or external to the crown portion of a natural tooth

extracoronal attachment: any prefabricated attachment for support and retention of a removable dental prosthesis; the retentive components (the matrix and patrich components or clasp) are positioned outside the normal contour of the abutment tooth; comp, INTRACORONAL ATTACHMENT, PRECISION ATTACHMENT

extracoronal retainer: that part of a fixed or removable partial denture uniting the abutment to the other elements of a prosthesis that surrounds all or part of the prepared crown

extraoral tracing: a tracing made outside the oral cavity by means of devices that extend outside the oral cavity; a tracing made outside the oral cavity; Editorial note for usage: extraoral tracer (ing), intraoral tracer (ing), and tracing device are the primary terms

extrinsic: originating from or on the outside; extrinsically adv

extrinsic coloring: any fluid that gradually passes through tissues; inflammatory exudate is a fluid with a high content of serum proteins and leukocytes, formed as a reaction to tissue injury.

F

fabrication: the building, making, or constructing a restoration

face form: the outline form of the face from an anterior view, sometimes described geometrically as square, tapering, ovoid, or by various combinations of these basic forms (GPT-4); syn, ESTHETIC FRAME OF THE FACE, FACIAL FORM; comp, FACIAL MIDLINE

facebow: an instrument used to record the spatial relationship of the maxillary arch to some anatomic reference point or points and then transfer this relationship to an articulator; it orients the dental cast in the same relationship to the opening axis of the articulator; customarily the anatomic references are the mandibular transverse horizontal axis and one other selected anterior reference point; syn, EARBOW, HINGE BOW, KINEMATIC FACEBOW, AVERAGE AXIS FACEBOW, STEREOTACTIC FACEBOW

facebow fork: that component of the facebow used to attach the occlusion rim and/or natural teeth to the facebow

facebow preservation: the maxillary occlusal registration record affixed to the mandibular member of an articulator useful in facilitating subsequent transfers of other maxillary casts or prostheses to the articulator; syn, REMOUNT RECORD INDEX

facebow record: the registration obtained by means of a facebow; AVERAGE AXIS FACEBOW RECORD, KINEMATIC FACEBOW RECORD, STEREOTACTIC FACEBOW RECORD

facebow transfer: the process of transferring the facebow record of the spatial relationship of the maxillary arch and related anatomic reference point or points to an articulator

facet: n (1625): a small, planar surface on any hard body; Editorial note for usage: the French spelling of facet, facette, has continued to confuse the profession regarding pronunciation; syn, WEAR FACET

facial: the surface of a tooth or other oral structure approximating the face (either the lips or the cheek); comp, Buccal, LABIAL

facial augmentation implant prosthesis: a maxillofacial prosthesis made of implantable biocompatible material generally onlayed on an existing bony area beneath the skin tissue to fill in or selectively raise portions of the overlying facial skin tissues to create acceptable contours; although some forms are pre-made, the facial augmentation implant prosthesis is usually custom made for surgical implantation for each individual patient because of the irregular or extensive nature of the facial deficit; an implantable biocompatible material generally laid on an existing bony area beneath the skin tissues to fill in or selectively raise portions of the overlying facial skin tissues to create acceptable contours (GPT-7); syn, facial implant

facial form: the outline form of the face from an anterior view; syn, FACE FORM

facial midline: the vertical line bisecting a horizontal line originating at the exocanthion of one eye and meeting the exocanthion of the other eye; the facial midline is the midline of the esthetic frame of the face

facial moulage: a negative reproduction (impression) of the face that records soft tissue and bony contours of the face; used for diagnostic purposes or to fabricate a prosthesis; comp, COMPLETE FACIAL MOULAGE, MOULAGE, SECTIONAL FACIAL MOULAGE

facial profile: the outline form of the face from a lateral view

facial prosthesis: a maxillofacial prosthesis that artificially replaces a deficient anatomy of the face as a result of surgery, trauma, or congenital absence; syn, EXTRAORAL PROSTHESIS
facial prosthetic adhesive \fəˈʃal prōs-\textit{thē}tēk ād-\textit{he}vēs\textsuperscript{̄} a material used to adhere a facial prosthesis to the skin

facing \fā\textit{sāng}, n (1566): a veneer of any restorative material used on a natural tooth or prosthesis as a restoration to simulate a natural tooth; \textit{comp, COMPOSITE RESIN LAMINATE VENEER, COMPOSITE RESIN VENEER, PORCELAIN LAMINATE VENEER, PORCELAIN VENEER}

failure \fā\textit{tēg} fā\textit{yēr} n: in dental materials, fracture of any physical material as a result of cyclic loading and unloading characterized by fracture below its ultimate tensile strength; in prosthetics, the inability of a prosthesis to produce the expected desired outcome

Farrar appliance: \textit{syn, FARRAR DEVICE}

Farrar device: \textit{eponym} for a type of occlusal device used to position the mandible anteriorly; used in the treatment of some types of temporomandibular joint disc disorders; C. L. Goeldner includes descriptions and illustrations of several devices used to retract teeth and “... for many other purposes”; orig, William B. Farrar, dentist, Alabama, U.S.A., who also is credited with various “push- and pull-jacks” for tooth movement, and devices for orthodontic tooth movement

fatigue \fā\textit{tēg}\textit{vb} 1. to break or fracture a material caused by repeated cyclic or applied loads below the yield limit; n 2. usually viewed initially as minute cracks followed by tearing and rupture; also termed brittle failure or fracture; \textit{comp, FAILURE, FRACTOGRAPHY}

feather-edge finish line: the demarcation between prepared and unprepared tooth structure created by minimal tooth preparation without a defined visible line of reference for the cavosurface finish line such as a shoulder or chamfer finish line; \textit{comp, KNIFE-EDGE FINISH LINE}

feeding aid \fē\textit{ding ād} \textit{obs}: a medically prescribed prosthesis that closes the oronasal cavity defect, thus enhancing sucking and swallowing, and maintains the right and left maxillary segments of infants with cleft palates in their proper orientation until surgery is performed to repair the cleft; \textit{syn, FEEDING PROSTHESIS}

feeding appliance \textit{obs, nonstandard} \textit{syn, FEEDING AID, FEEDING PROSTHESIS}

feeding prosthesis \fē\textit{ding prōs-\textit{thē}sē} \textit{obs}: a prosthesis indicated for newborns with cleft palates to permit normal sucking and feeding; \textit{syn, FEEDING AID}

Feldkamp-Davis-Kress algorithm: a back-projection algorithm for CT reconstruction

feldspar \fē\textit{ld\spār, fēl\textsuperscript{̄} \textit{n} (1757): 1. any one of a group of minerals, principally aluminosilicate of sodium, potassium, calcium, or barium, which are essential constituents of nearly all crystalline rocks; 2. a crystalline mineral of aluminum silicate with sodium, potassium, barium, and/or calcium; a major constituent of some dental porcelains

feldspathic \fē\textit{ld\spāth\textit{ɪk}, fēl\textsuperscript{̄} \textit{adj} (ca. 1828); related to or containing feldspar; used especially with reference to porcelain glaze

feldspathic porcelain: porcelain fabricated from the natural mineral group feldspar; the material is composed of compounds of oxygen with lighter metals and nonmetals and is predominantly an amorphous (non-crystalline) matrix with one or more crystalline phases (such as leucite K\textsubscript{2}O\textsubscript{−}Al\textsubscript{2}O\textsubscript{3}·4SiO\textsubscript{2})

ferroelastic domain switching: toughening mechanism for zirconium

ferrule \fē\textit{rē\textsubscript{ɪ}l \textit{n} (15\textsubscript{c}) 1. a band or ring used to encompass the root or crown of a tooth; 2. any short tube or bushing for making a tight joint

festoon \fē\textit{stoʊn} \textit{n} (1630): 1. any decorative chain or strip hanging between two points; 2. in dentistry, carvings in the base material of a denture that simulate the contours of the natural tissues that are being replaced by the denture

FGP: \textit{acronym} for FUNCTIONALLY GENERATED PATH

fiber-reinforced composite resin: \textit{acronym} is FRC; composite resin impregnated with glass, carbon, or polyethylene fiber; fibers may be composite resin impregnated by the provider or pre-impregnated by the manufacturer; dental application includes resin-bonded prostheses and posts; \textit{comp, COMPOSITE RESIN}

fiber-reinforced composite resin post: \textit{acronym} is FRC post; composite resin-impregnated glass, carbon, or polyethylene fiber posts; these fibers may be composite resin impregnated by the provider or pre-impregnated by the manufacturer; \textit{comp, POST}

fiber-reinforced composite resin prosthesis: \textit{syn, RESIN-BONDED PROSTHESIS}

fibrointegration \fē\textit{broi\textsubscript{ɪ}nt\textsubscript{ɪ} \\textit{ti-gra\textsubscript{ɪ}shun} \textit{n} (1982): \textit{syn, FIBROUS INTEGRATION}

fibroosseous integration \textit{obs, syn, FIBROUS INTEGRATION}

fibrosis \fī-brōsēz\textit{sē} \textit{n} (1873): the formation of fibrous tissue; fibroid or fibrous degeneration

fibrous \fī\textit{brūs} \textit{adj} (1626): composed of or containing fibers

fibrous adhesion \fī\textit{brūs ād-\textit{he}vēz\textsuperscript{̄}}: a fibrous band or structure by which parts abnormally adhere

fibrous ankylosis \fī\textit{brūs āng\textsuperscript{̄}kā-loi\textsuperscript{̄}sē\textsuperscript{̄}sē} reduced mobility of a joint as a result of proliferation of fibrous tissue

fibrous integration \fī\textit{brūs ī\textsuperscript{ɪ} \\textit{ti-gra\textsubscript{ɪ}shun} the presence of a layer of intervening fibrous connective tissue between a dental implant and the adjacent bone indicative of failed osseointegration

fibula free graft: an autogenous composite graft that can include bone, muscle, connective tissue, and skin for the reconstruction of the maxillae or mandible; objectives include a microvascular free tissue transfer of the fibula and blood supply, which does not need to be staged like previous bone grafting procedures of this magnitude

fiducial marker registration: an object placed into an image and used as a reference; in radiology, a marker placed in a CBCT scan

field \fēld\textit{n} (bef. 12\textsubscript{c}): 1. an area or open space, as an operatory or visual field; 2. a range of specialization or knowledge, study, or occupation

filter \fī\textit{ler} \textit{n} (1563): in radiology, a solid screen insert, usually of varying thicknesses and different metals (aluminum, copper, tin) placed to filter out photons of longer wavelengths

final flask closure \fī\textit{nāl flāsk kļō\textsuperscript{̄} zher\textsuperscript{̄}s the last closure of a dental flask before polymerizing and after trial packing of the mold with a restorative material

final impression \fī\textit{nāl īm-prā\textsubscript{̄}sh\textsuperscript{̄}nān the impression that represents the completion of the registration of the surface or object

fine \fī\textsubscript{ın} \textit{adj} (13\textsubscript{c}) 1. free from impurities; 2. of a metal, having a stated proportion of pure metal in its composition, expressed in parts per thousand

fineness \fī\textsubscript{ın\textsuperscript{̄}nē\textsuperscript{̄}s\textsubscript{̄}\textsuperscript{̄}}: the proportion of pure gold in a gold alloy; the parts per 1000 of gold; e.g., a gold coin may have a fineness of 0.9265

THE JOURNAL OF PROSTHETIC DENTISTRY
finish • floss threader

**finish** vn [fin’ish] n (1779): to put a final coat or surface on; the refinement of form prior to polishing

**finish line** vn [fin’ish lin] n (1899): 1. a line of demarcation determined by two points; 2. in dentistry, the junction of prepared and unprepared tooth structure with the margin of a restorative material; 3. the planned junction of different materials; syn, MARGIN; comp, BEVELED SHOULDER FINISH LINE, CHAMFER FINISH LINE, FEATHER-EDGE, SHOULDER FINISH LINE, KNIFE-EDGE FINISH LINE

**firing** vfr’ing’s: the process of porcelain fusion; in dentistry, specifically to produce porcelain restorations

**first stage dental implant surgery** vfr’st děn’tal ɪm’plənt sə’rē; the initial surgical procedure in dental implant placement; comp, SECOND STAGE DENTAL IMPLANT SURGERY

**Fischer’s angle**: eponym for the angle formed by the intersection of the protractive and nonworking-side condylar paths as viewed in the sagittal plane when a recording of mandibular movement is made by using a device located lateral to the temporomandibular joints; however, Lundeen determined that when the nonworking and protractive movements are recorded at the condyles, the nonworking and protractive movements share the same opening and closing course during most of the movements, indicating there is no Fischer’s angle present at the condylar level from a sagittal view; orig, Rudolf Fischer, dentist, Zurich, Switzerland

Fischer R. Beziehungen zwischen den Kieferbewegungen und der Kaufflachennform der Zuhne. Schweizerische Monatschrift fur Zahnheilkunde Zurich; 1926:74

Fischer R. Die öffnungsbewegungen des Unterkiefers und ibre Wiedergabe am Artikulator. Schweizerische Monatschrift fur Zahnheilkunde 1935;45:867-99

**fissure** vn [fɪʃ ˈɜːr] n (15c): any cleft or groove, normally present or otherwise; a non-coalesced groove in the surface of a tooth, usually because of imperfect fusion of adjoining enamel lobes; distinguished from a groove or sulcus; syn, ENAMEL FISSURE

**fissured fracture** vn [fɪʃ’ərd fræk’ʃur] s: a fracture that extends partially through a bone with displacement of the bony fragments

**fistula** vn [fɪʃ’tələ] n (14c): a pathologic or abnormal passage resulting from incomplete healing; a communication between two internal organs or one that leads from an internal organ to the surface of a body; usually designated according to the parts that it communicates with, as alveolar fistula; –las for –lea in pl

**fit** vn vb (1586): 1. to be suitable or to be in harmony; 2. to conform correctly to the shape or size by means of inserting and adjusting until correctly in place; to adapt one structure to another, as the adaptation of any dental restoration to its site, in the mouth; syn, EDENTED

**fitted** adj vb, also fit vb; fitting vfr’ing vb

**fix** vn vb (14c): to make firm, stable, or stationary, to attach to another object so that separation of the parts cannot be accomplished without breaking of the mechanical and/or chemical bonds that hold the parts in spatial relationship with each other; to repair

**fixed** adj vb, also fix vb (14c): securely placed or fastened; stationary; not subject to change; immobile

**fixed bridge** obs, slang; syn, FIXED PARTIAL DENTURE

**fixed complete denture**: a fixed dental prosthesis that replaces the entire dentition and associated structures of the maxillae or mandible; it cannot be removed by the patient; descriptive terminology (modifiers) expressed as adjectives to each fixed dental prosthesis may include such items as the method of retention, composition, nature of support, design characteristics, and/or form of anchorage

**fixed dental prosthesis** vfr’st děn’tal prōs’θē-sı’s: the general term for any prosthesis that is securely fixed to a natural tooth or teeth, or to one or more dental implants/implant abutments; it cannot be removed by the patient; syn, ARTIFICIAL CROWN, FIXED COMPLETE DENTURE, FIXED PARTIAL DENTURE, splintered crowns

**fixed dental prosthesis retainer** vfr’st děn’tal prōs’θē-sı’s ri-tā’ner: the part of a fixed partial denture or fixed complete denture that unites the abutment(s) to the remainder of the restoration

**fixed partial denture** vfr’st pā’r-shal děn’chor: any dental prosthesis that is luted, screwed, or mechanically attached or otherwise secured to natural teeth, tooth roots, and/or dental implants/abutments that furnish the primary support for the dental prosthesis and restoring teeth in a partially edentulous arch; it cannot be removed by the patient

**fixed prosthodontics** vfr’st prōs’θa-dŏn’tıks: the branch of prosthodontics concerned with the replacement and/or restoration of teeth by artificial substitutes that cannot be removed from the mouth by the patient

**fixture** vn [fɪks’chor] n: something that is fixed or attached, as a structural part or a permanent appendage

**fixture cover** vn [fɪks’chor kə’veɪr] n (1982): an endosteal dental implant; syn, ENDOSTEAL DENTAL IMPLANT, DENTAL IMPLANT

**flange** vn [flæŋ] n (ca 1688): a rib or rim used for strength, for guiding or attachment of another object; comp, BUCCAL FLANGE, DENTURE FLANGE, LABCIAL FLANGE

**flange cover** vn [flæŋ kə’veɪr] n (ca 1864): to furnish with a flange; flanged vfr’ing

**flange contour** vn [flæŋ kən’tɔːr] n: the design of the flange of a denture; (GPT-4)

**flask** vn [flæsk] n: a metal case or tube used in investing procedures; comp, CASTING FLASK, CROWN FLASK

**flask cover** vn [flæsk kə’veɪr] n: to flask or surround; to invest

**flask closure** vn [flæsk kloʊ’zər] n: the procedure of bringing two halves, or parts, of a flask together; comp, FINAL FLASK CLOSURE, TRIAL FLASK CLOSURE

**flasking** vn [flæsk’ɪŋ] n (20c): 1. the act of investing in a flask; 2. the process of investing the cast and a wax replica of the desired form in a flask preparatory to molding the restorative material into the desired product; comp, PROCESS

**flexible resin removable partial denture**: a metal-free removable partial denture constructed by using one or more thermoplastic resins classified according to ISO 1567 including acetal resins, polycarbonates (polymesters), acrylic resins, and polyamides (nylons) and polyaryletherketones, including polyethyetherketone; comp, REMOVABLE PARTIAL DENTURE

**flipper** slang: syn, REMOVABLE PARTIAL DENTURE; comp, INTERIM DENTURE, INTERIM PROSTHESIS, interim removable partial denture, PROVISIONAL PROSTHESIS, PROVISIONAL RESTORATION

**floss threader**: a flexible, polymer needle-like device for threading dental floss under a fixed partial denture or between splintered restorations
flowable composite resin ˌfloom-ə-ˈbel kōm-ˈpō-zət ˈrēz-ən (1998): composite resin that is less highly filled than conventional composite resin and has improved wettability

fluorescence ˌflōr-ə-ˈres ən n (1852): a process by which a material absorbs radiant energy and emits it in the form of radiant energy of a different wavelength band, all or most of whose wavelengths exceed that of the absorbed energy; fluorescence, as distinguished from phosphorescence, does not persist for an appreciable time after the termination of the excitation process

fluorescent ˌflōr-ə-ˈres-ənt adj (1853): having or relating to fluorescence

fluoride applicator nonstand əd n, FLUORIDE GEL CARRIER

fluoride gel carrier ˌfloom-əd ˈjēl kār-ə-ˈen (20c): a device that covers the teeth in either dental arch and is used to apply topical fluoride in close proximity to tooth enamel and dentin for several minutes daily; generally considered essential for all patients with any natural dentition who undergo oral radiation therapy to assist in prevention of extensive dental caries; syn, FLUORIDE APPLICATOR, FLUORIDE TRAY

fluoride tray nonstand əd n, FLUORIDE GEL CARRIER

flux ˌfloks ə n (14c): 1. in physics, the rate of flow of a liquid, particles, or energy; 2. in ceramics, an agent that lowers the fusion temperature of porcelain; 3. in metallurgy, a substance used to increase fluidity and to prevent or reduce oxidation of a molten metal; 4. any substance applied to surfaces to be joined by brazing, soldering or welding to clean and free them from oxides and promote union

FMA: acronym for FRANKFORT MANDIBULAR PLANE ANGLE

foil ˌfōil n (14c): an extremely thin, pliable sheet of metal, usually of variable thickness; comp, GOLD FOIL, PLATINUM FOIL, TINFOIL

force ˌfôrs n (14c): an agency or influence that, when exerted on a body, tends to set the body into motion or to alter its present state of motion; force applied to any material causing deformation of that material; comp, MASTICATORY FORCE, OCCLUSAL FORCE

forces of mastication ˌfôrs-es ūv màz ˈtî-kā ˈshun; the motive force created by the dynamic action of the muscles during the physiologic act of mastication (GPT-4)

1 form ˌfôrm n (13c): the shape or configuration of anything, as distinguished from its material

2 form ˌfôrm vt (13c): to give shape, to mold, to adapt

fornix ˌfôr-niks n (1681): an anatomical arch or fold; fornices ˌfôr-ni-ˈsēz ə pl

fossa ˌfôsə ə n (1771): an anatomical pit, groove, or depression; fossae ˌfôs-ə ˈpl

foundation restoration ˌfoun-ˈdā ˈshun rēz-tə-ˈrē ˈshun; the core buildup portion of a tooth that is prepared for an artificial crown

foveae palatinae ˌfo-və-ē ˈpāl-ə-tə-ə; two small pits or depressions in the posterior aspect of the palatal mucosa, one on each side of the midline, near the attachment of the soft palate to the hard palate

fractography: the study of fracture mechanics of brittle materials

1 fracture ˌfrak-chur n (15c): the process or act of breaking; state of being broken; comp, AVULSION FRACTURE, BLOWOUT FRACTURE, CEMENTUM FRACTURE, CLOSED REDUCTION OF A FRACTURE, COMMUNICATED FRACTURE, COMPLICATED FRACTURE, DISLOCATED FRACTURE, FISSURED FRACTURE, GREENSTICK FRACTURE, GUERIN'S FRACTURE, IMPACTED FRACTURE, INDIRECT FRACTURE, INTRA- CAPSULAR FRACTURE, FRACTURE, MIDFACIAL FRACTURE, OPEN FRACTURE, PYRAMIDAL FRACTURE, ROOT FRACTURE, SECONDARY FRACTURE, SIMPLE FRACTURE, SPONTANEOUS FRACTURE, SUBCONDYLAR FRACTURE, SUBPERIOSTEAL FRACTURE

2 fracture ˌfrak-chur vb (1612): to cause a fracture in; to break, rupture, or tear; fractured ˌfrak-churd; fracturing ˌfrak-chur-ing; vt fracture strength ˌfrak-chur strəŋkθ; stress required for material failure; represented by a line plotted on a stress-versus-strain graph; this strain may be less than the ultimate strength; i.e., the maximal strain on a sample prior to material failure

fracture toughness ˌfrak-chur təŋk-tuθ; a mechanical characteristic of a material with cracks as a measure of the resistance and the amount of energy required for fracture; ASTM E1820-08a standard test for measuring fracture toughness

framework ˌfræm-wərk n (1644): 1. an interior or imbedded latticework or structural frame used to support some other object or objects; 2. the skeletal portion of a prosthesis (usually metal, sometimes ceramic) around which and to which are attached the remaining portions of the prosthesis to produce a finished restoration; Editorial note for usage: for dental prostheses, the framework may be any metal or combination of metals or ceramic material, with various forms including designed slots, incorporated corrective angulation patterns, etc., which provide rigidity to a dental prosthesis; such a framework can be made in whole or made of component parts; frequently used to anchor or support a prosthesis to natural teeth or dental implant abutments or both

Frankfort horizontal plane ˌfrängk-tər hər-ˈtər zən tiˈplən; 1. eponym for a plane established by the lowest point on the margin of the right or left bony orbit and the highest point on the margin of the right or left bony auditory meatus; 2. a horizontal plane represented in profile by a line between the lowest point on the margin of the orbit to the highest point on the margin of the auditory meatus; adopted at the 13th General Congress of German Anthropologists (the “Frankfort Agreement”) in Frankfort in 1882, and finally by the International Agreement for the Unification of Craniofacial and Cephalometric Measurements in Monaco in 1906; syn, auriculo-orbital plane, eye-ear plane, Frankfort horizontal (FH), Frankfort horizontal line

Frankfort mandibular plane angle ˌfrängk-tər mənˈdi-ˌblə lər plən ˈan-gəl; 1. eponym for a plane formed by the intersection of the Frankfort horizontal plane with the mandibular plane

Frankfort plane: syn, FRANKFORT HORIZONTAL PLANE

free gingiva ˌfrē jīn-ja-ˈvā; the part of the gingiva that surrounds the tooth and is not directly attached to the tooth surface

free gingival groove: the line demarcating the junction between free and attached gingival tissue

free gingival margin ˌfrē jīn-ja-ˈval mar ˈjīn; the unattached gingiva surrounding the teeth in a collar-like fashion and demarcated from the attached gingiva by a shallow linear depression, termed the FREE GINGIVAL GROOVE

free mandibular movement ˌfrē mən-dēb-ə-ˈlər ˈmōv-ər-ment; 1. any mandibular movement made without interference; 2. any uninhibited movement of the mandible

freedom in intercuspal position: syn, INTERCUSPAL CONTACT AREA

freeway space obs, slang n, INTEROCCLUSAL REST DISTANCE, INTEROCCLUSAL REST SPACE

frenitis ˌfrē-nə-təs n (1879): a vibration perceptible on palpation; in dentistry, a vibration palpable when the teeth come into contact

frenectomy: surgical excision of a frenum

frenulum ˌfrē-nə-ləm n (1706): a connecting fold of membrane serving to support or retain a part

frenum ˌfrē-nəm n, frenums ˌfrē-ənəmz, or frena pl, syn, FRENULUM

flowable composite resin • frenum
 frictional attachment • geriatrics

frictional attachment Vfrik’shun-al a-tach’ment; a precision or semiprecision attachment that achieves retention by metal to metal contact, without springs, clips, or other mechanical means of retention; syn, PRECISION ATTACHMENT

friction retained pin Vfrik’shun rít-tánd pin; a metal rod driven into a hole drilled into dentin to enhance retention; retained solely by dentinal elasticity

1frit Vfrit n (1662); 1. the calcined or partly fused matter of which glass is made; 2. a mass of fused porcelain obtained by firing the basic constituents and plunging them into water while hot; the frit is ground to make porcelain powders

2frit Vfrit vt (1805); 1. to prepare substances for glass by heating; to fuse; 2. to convert into a frit; fritted Vfrit-tid; fritting Vfrit’ing

frontal plane Vfrún’ti; any plane parallel with the long axis of the body and at right angles to the median plane, thus dividing the body into front and back parts; so called because this plane roughly parallels the frontal suture of the skull

fulcrum line Vfōl’krum lim; 1. a theoretical line passing through the point around which a lever functions and at right angles to its path of movement; 2. an imaginary line, connecting occlusal rests, around which a removable partial denture tends to rotate under mandibular forces; the determinants for the fulcrum line are usually the cross-arch occlusal rests on the most distally located abutments; comp, FULCRUM LINE OF A REMOVABLE PARTIAL DENTURE, RETENTIVE FULCRUM LINE

fulcrum line of a removable partial denture Vfōl’krum lim ūv a ri-mō’ov’va-bal pār’shal dēn’chur; a theoretical line around which a removable partial denture tends to rotate

full denture obs; syn, FIXED COMPLETE DENTURE, REMOVABLE COMPLETE DENTURE

full denture prosthetics Vfōl’d dēn’chur prōs-thē’tiks obs; syn, COMPLETE DENTURE PROSTHODONTICS

full-thickness graft Vfōl’thik-nēs; a transplant of epithelium consisting of skin or mucous membrane with a minimum of subcutaneous tissue

full veneer crown; syn, COMPLETE CROWN

fully adjustable articulator Vfōl’é a-jüst-a-bal ār’tik’ya-lā’tor; an articulator that allows replication of 3D movement of recorded mandibular motion; comp, Class IV articulator

fully adjustable gnathologic articulator Vfōl’é a-jüst-a-bal nāth ə-lō’jik ār’tik’ya-lā’tor; an articulator that allows replication of 3D movement plus timing of recorded mandibular motion; syn, CLASS IV ARTICULATOR

functional articulation Vfung’sha-nal ār-tik’ya-lā’shun; the occlusal contacts of the maxillary and mandibular teeth during mastication and deglutition

functional chew-in record Vfung’sha-nal ʧō’i-in rēk’ord; obs; a record of the movements of the mandible made on the occluding surface of the opposing occlusion rim by teeth or scribing studs and produced by simulated chewing movements (GPT-4); syn, FUNCTIONALLY GENERATED PATH

functional dislocation Vfung’sha-nal ʤi’lō-kā’shun; dislocation of the articular disc of the temporomandibular joint as a result of a seriously impaired disc-condyle complex function

functional jaw orthopedics Vfung’sha-nal ʤo’ar’th-a-pē’iks; use of orthodontic prostheses that rely on the patient’s own musculature for force application and that attempt to alter the skeletal structure of the face

functional mandibular movements Vfung’sha-nal mān-dib’u-lar mō’ov mentz; all normal, proper, or characteristic movements of the mandible made during speech, mastication, yawning, swallowing, and other associated movements

functional occlusal harmony Vfung’sha-nal a-kloo’sal hār’ma-ne; obs; the occlusal relationship of opposing teeth in all functional ranges and movements that will provide the greatest masticatory efficiency without causing undue strain or trauma on the supporting tissues (GPT-4)

functional occlusal splint Vfung’sha-nal a-kloo’so sal splint’ non-stands; syn, OCCLUSAL DEVICE

functional occlusion Vfung’sha-nal a-kloo’shun; obs; the contacts of the maxillary and mandibular teeth during mastication and deglutition (GPT-4)

functional record Vfung’sha-nal rēk’ord; a record of lateral and protrusive movements of the mandible made on the surfaces of an occlusion rim or other recording surface

functional wax; syn, DENTAL IMPRESSION WAX

functionally generated path Vfung’sha-na-le jēn’a-rāt’id páth; a registration of the paths of movement of the occlusal surfaces of teeth or occlusion rims of one dental arch in plastic, wax, or other medium attached to the teeth or occlusion rims of the opposing arch

functioning condyle; syn, WORKING-SIDE CONDYLE

furcation Vfōr’kā’shun n; the anatomic region of a multi-rooted tooth where the roots diverge

fused-deposition modeling; acronym is FDM; a computer-aided manufacturing (CAM) by additive modeling using a layering of a thermoplastic material

G

gag Vgāg n (1553); 1. an involuntary contraction of the muscles of the soft palate or pharynx that results in retching; 2. a surgical device for holding the mouth open

galvanic skin response Vgāl’vānk’ik; the change in the electrical resistance of the skin in response to diverse stimuli

galvanic stimulation Vgāl’vān’ik stim’ya-lā’shun; stimulation of muscles through the application of varying amplitudes and pulsations of electrical current; used in the treatment of muscle disorders; comp, TRANSCUTANEOUS ELECTRICAL NEURAL STIMULATION

galvanism Vgāl’vān’iz’m n (1797); accelerated corrosion of a metal as a result of electrical contact with a more noble metal in a corrosive electrolyte; the resulting current flow can produce nerve stimulation, unpleasant tastes, and other physiological reactions commonly associated with this term

gavage Vgāvāzh’ n (1889); forced feeding especially through a tube passed into the stomach

generated occlusal path; syn, FUNCTIONALLY GENERATE PATH

genial Vjät’nāl adj (1566); an anatomic term in reference to the chin

genial tubercles Vjät’nāl tōō’ber-kalz, tyōō-; mental spines; rounded elevations (usually bilateral) clustered around the midline on the lingual surface of the lower portion of the mandibular symphysis; these tubercles serve as attachments for the genioglossus and geniohyoid muscles

genioplasty Vjü’ni-ō-plās’ti n; 1. a surgical procedure performed to alter the contour of the mandibular symphysis; 2. plastic surgery of the chin

geriatrics Vjä’rē-ā’trēk’siks n, pl but sing in constr (1909); the branch of medicine that treats all problems peculiar to the aging patient, including the clinical problems of senescence and senility; comp, DENTAL GERIATRICS, GERiatric dentistry, GERodontics, GERodontology
gerodontics |ˈdə-nət| n, pl but sing in constr; the treatment of dental problems of aging persons; also spelled gerodontology

gingival denture contour in gerodontics: augmentation of interproximal and facial gingival tissues for syn gingival zenith: a shallow, fibrous investing tissue, covered by epithelium, that immediately surrounds a tooth and is contiguous with its periodontal ligament and with the mucosal tissues of the mouth; → vaе \ˈve\; pl, comp, ATTACHED GINGIVA, FREE GINGIVA, MARGINAL GINGIVA

gingival crevice \ˈja-val krēvˈīz\: syn, GINGIVAL SULCUS

gingival crevicular fluid: the fluid that seeps through the junctional epithelium; this is usually increased in the presence of inflammation

gingival contour \ˈja-val dənˈchur kōnˈtōr\: the form of the denture base or other material around the cervical regions of prosthetic teeth

gingival displacement \ˈja-val dəsˈplāsment\: the deflection of the marginal gingiva away from a tooth

gingival embrasure: the space between adjacent teeth that is cervical to the proximal contact area; syn, INTERDENTAL GINGIVAL SPACE

gingival mask: a polymeric material that overlays a gypsum die simulating the contour of the gingiva; syn, gingival replica

gingival porcelain: a porcelain blend used for the shaping of the gingiva and papillae of a ceramic restoration; comp, BODY PORCELAIN, INCISAL PORCELAIN, PORCELAIN MARGIN, SHOULDER PORCELAIN

gingival retraction: syn, GINGIVAL DISPLACEMENT

gingival sulcus: a shallow fissure between the marginal gingiva and the enamel or cementum; it is bounded by the tooth surface on one side, the sulcular epithelium on the other, and the junctional epithelium at its most apical point

gingival trigone: the most gingival point of curvature along the free gingival margin of a tooth; syn, GINGIVAL ZENITH

gingival veneer prosthesis: a removable resin or elastomeric veneer covering the gingiva adjacent to natural teeth for the augmentation of interproximal and facial gingival tissues for esthetics and phonetics; comp, GINGIVAL MASK

gingival zenith: syn; GINGIVAL TRIGONE

ginglymoarthrodial joint: any joint, such as the temporomandibular joint, capable of both hinging and gliding articulation

ginglymus joint \ˈja-gla-mūsˈjoint\: a type of synovial joint that allows movement in one plane only; → mī \ˈmī\; mǐd adj; syn, hinge joint

glare \ˈglār\ n (13c): the disturbance of the sensitivity of the eye experienced when portions of the field of view have a brightness or intensity greatly in excess of that of the average for the field of view

glass-ceramic \ˈglas sa-rāmˈik\: a solid material, crystalline and partly glassy, formed by controlled crystallization of a glass

glass ionomer \ˈglāz ˈi-anˈōmər\ (1998): a cement, luting, or restorative agent composed of an acid-soluble glass, polyacrylic acid, and water that sets via an acid-base reaction

1 glaze \ˈglāz\ vb (14c): 1. to cover with a glossy, smooth, reflective surface or coating; 2. the final firing of porcelain in which the surface is vitrified until a high gloss and surface compression state are achieved; glazed \ˈglāzəd\, glazing \ˈglāzən\ vt

2 glaze: a ceramic veneer on a dental porcelain restoration after it has been fired, producing a nonporous, glossy or semi-glossy surface; comp, NATURAL GLAZE, OVERGLAZE, GLOSS

glenoid fossa: the concavity in the posterior-inferior aspect of the zygomatic process of the temporal bone that receives the mandibular condyle

gliding occlusion \ˈglīding a-klooˈzhən\: obs; used in the sense of designating contacts of teeth in motion (GPT-4); comp, ARTICULATION, TRANSLATION

gloss: a specific light intensity reflectance on a surface with the incident angle equal and opposite to the reflectance angle; measured in gloss units (GU) by a gloss meter; amount of reflectance at a specific angle on black glass as a standard (100 GU) compared to a matte surface (0 GU); ISO 2813 and ASTM D523 are examples of standard tests; CIE entities of gloss include: (1) specular, (2) contrast, (3) reflection haze, (4) sheen; comp, GLOSS METER

gloss meter: n an instrument to measure the reflectance of light on a surface; measured in gloss units (GU)

glossalgia \ˈglōsəlˈjēə\ n: pain in the tongue

glossectomy \ˈglōsəkˈta-mē\ n: partial or total resection of the tongue

glossodynia \ˈglōsədˈniə\ n: syn, GLOSSOPHYRIS

glossoplasty \ˈglōsə-plāstˈi\ n: plastic surgery of the tongue

glossoppynia \ˈglōspəˈpi-nə\ n: painful or burning tongue

glossopyrosis \ˈglōsə-pəˈroʊˌsīə\ n: a form of paresthesia characterized by pain, burning, itching, and stinging of the mucosa of the tongue, without noticeable lesions; syn, BURNING TONGUE, GLOSSODYNIA

gnathic ν\ˈnaθik\ adj (1882): of or pertaining to the jaw or cheek

gnathion \ˈnaθənˈeən\ n: the lowest bony point, in the median plane of the mandible

gnathodynamometer \ˈnaθə dəmətəmˈeə\ n: 1. an instrument for measuring the force exerted in closing the jaws; 2. an instrument used for measuring occlusal pressure

gnathology \ˈnaθoˌloˈje\ n: a general term for the study of the biology of the masticatory mechanism and the kinematic recording of mandibular position; orig, Beverly B. McCollum, Harvey Stallard, Charles Stuart, dentists, U.S.A., 1925-1949; comp, McCollum Gnathograph, McCollum Gnathoscope, organic occlusion, Stuart articulator

Goddard’s linear occlusion: orig, William H. Goddard, dentist, Kentucky, U.S.A., 1808-1883; syn, LINEAR OCCLUSION

gold foil \ˈglōld\: 1. pure gold rolled into extremely thin sheets (0.127 mm); 2. a precious metal foil used in restoration of carious or fractured teeth

Golden Proportion: the ratio between succeeding terms in a mathematical progression; called the Fibonacci series; each number is the sum of the two immediately preceding it (i.e., 1, 2, 3, 5, 8, 13, 21, 34, 55, 89, 144, and so on; the ratio converges on approximately...
Golden Proportion • Hader bar

1.618 to 1; claims have been made that the Golden Proportion exists in natural dentitions in the ratio of the widths of incisors and canines as seen from the facial view; orig, Leonardo Pisanò: nickname Fibonacci, mathematician, Italy, c1170-c1240

gothic arch tracer |ˈgōthik arch trəˈsen| obs: the device that produces a tracing that resembles an arrowhead or a gothic arch; the device is attached to the opposing arches; the shape of the tracing depends on the relative location of the marking point and the tracing table; the apex of a properly made tracing is considered to indicate centric relation (GPT-4); Editorial note for usage: extraoral tracer (ing), intraoral tracer (ing), and tracing device are the primary terms; comp, ARROW POINT TRACER, CENTRAL BEARING TRACING DEVICE, CEPHALOMETRIC TRACER, COBLE BALANCER, EXTRAOERAL TRACER, INTRAORAL TRACING, MANDIBULAR TRACER, NEEDLE POINT TRACING, TRACING DEVICE

gothic arch tracing: comp, GOTHIC ARCH TRACER, TRACING DEVICE

graft |ˈgræft| n (14c): a tissue or material used to repair a defect or deficiency; comp, ALLOGRAFT, ALLOPLASTIC GRAFT, AUTOGENOUS GRAFT, AUTOGRAPH, FULL-THICKNESS GRAFT, HETEROGRAGHT, HO MOGRAPH, ISOGRAFT, SPLIT-THICKNESS GRAFT, XENOCENIC GRAFT

Grassman’s laws: eponym for three empirical laws that describe the color-matching properties of additive mixtures of color stimuli; 1. to specify a color match, three independent variables are necessary and sufficient; 2. for an additive mixture of color stimuli, only their tristimulus values are relevant, not their spectral compositions; 3. in an additive mixture of color stimuli, if one or more components of the mixture are gradually changed, the resulting tristimulus values also change gradually (laws do not hold for all observing conditions); orig, unknown author

Grasso clasp: eponym for a removable partial denture clasp assembly in which the horizontal retentive arm, originating from the latticework, is parallel to the occlusal plane, and the vertical reciprocral component, originating from the major connector, make simultaneous contact during placement; the occlusal rest originates from the distal guiding plate minor connector; orig, Dr Joseph E. Grasso, prosthodontist, CT, U.S.A.

GRAY: abbr, Gy: a physical measuring unit of absorbed ionizing radiation dose equal to 100 RADs; absorption of one joule of radiation energy by one kilogram of matter; comp, RAD, SIEVERT

green stage: a physical state of glass-ceramics in pre-crystallized stage

greenstick fracture |ˈgrɛn-stik| n (1885): a fracture in which the break in the bone is not complete; the bone appears to be bent on one side while the other side of the bone is broken

Griffith flaws: eponym for a theory for brittle materials that the observed fracture strength is lower than the theoretical cohesive forces; the incremental crack extension’s contribution to change in stress energy; orig, Alan Arnold Griffith, engineer, United Kingdom, 1893-1963; syn, MICROCRACK

grounding-in |ˈgrəʊ̅nd-ing-in| obs: a term used to denote the act of correcting occlusal disharmonies by grinding the natural or artificial teeth (GPT-1); syn, OCCLUSAL RESHAPING

groove |ˈgroʊv| n: a long narrow channel or depression, such as the indentation between tooth cusps or the retentive features placed on tooth surfaces to augment the retentive characteristics of crown preparations

group function |ˈgrʊʊp fʌŋkʃən| n: multiple contact relations between the maxillary and mandibular teeth in lateral movements on the working-side whereby simultaneous contact of several teeth acts as a group to distribute occlusal forces

Guerin’s fracture: eponym for LE FORT I FRACTURE; orig, Alphonse Francois Marie Guerin, surgeon, France, 1816-1895

guidance |ˈɡidəns| n (1590): 1. providing regulation or direction to movement; a guide; 2. the influence on mandibular movements by the contacting surfaces of the maxillary and mandibular anterior teeth; 3. mechanical forms on the lower anterior portion of an articulator that guide movements of its upper member; comp, ADJUSTABLE ANTERIOR GUIDANCE, ANTERIOR GUIDANCE, CONDYLAR GUIDANCE

guide pin |ˈɡid pɛn| n: the component of a dental implant system that is placed within the surgically prepared osseous site for an endosseal implant; it assists in determination of location and angulation of the site relative to soft tissue, bony landmarks, or other dental implants

guide plane |ˈɡid plɛn| obs: a plane that guides movement (GPT-4); syn, GUIDING PLANE

guide table |ˈɡid təˈbæl| n: the anterior element of an articulator on which the incisal pin rests. It may be custom contoured or mechanically adjusted; comp, ANTERIOR GUIDE TABLE; CUSTOM GUIDE TABLE

guided tissue regeneration |ˈɡiːd ˈtɪʃ(ə)n rɪˈʃæŋrə ʃən| any procedure that attempts to regenerate lost periodontal structures or alveolar process through differential tissue responses; barrier techniques, by using synthetic materials that may or may not resorb, to exclude epithelial ingrowth (periodontal regeneration) or connective tissue ingrowth (alveolar process regeneration) that is believed to interfere with regeneration

guiding occlusion |ˈɡiːdɪŋ əˈkluːʒən| obs: used in the sense of designating contacts of teeth in motion (GPT-4)

guiding planes |ˈɡiːdɪŋ ˈplænz| n: two or more vertically parallel surfaces on abutment teeth and/or fixed dental prostheses oriented so as to contribute to the direction of the path of placement and removal of a removable partial denture, maxillofacial prosthesis, and overdenture

guiding surfaces: syn, GUIDING PLANES

Gunning’s splint: eponym for a device fabricated from casts of edentulous maxillary and mandibular arches to aid in reduction and fixation of a fracture; Gunning’s initial work described four types of splints used in treating jaw fractures (1866-1867), which allowed openings for saliva flow, nourishment, and speech; orig, Thomas Brian Gunning, dentist, U.S.A., born in United Kingdom, 1813-1889; syn, OCCLUSAL SPLINT, OCCLUSAL DEVICE

gustation |ˈɡuː-stəˈʃən| n (1599): the act of perceiving taste

gypsum |ˈɡipsum| n (14c): the natural hydrated form of calcium sulfate, CaSO₄ • 2H₂O; gypsum dihydrate; comp, DENTAL STONE

gypsum-bonded investment: any casting investment with gypsum as a binder, also containing cristobalite or quartz as a refractory material; cristobalite and quartz are responsible for the thermal expansion of the mold during wax elimination; because gypsum is not chemically stable at temperatures exceeding 650°C (1200°F), these investments are typically restricted to castings of conventional Type II, III, and IV gold alloys

H

habitual centric nonstand: syn, MAXIMAL INTERCUSPAL POSITION

habitual occlusion nonstand: syn, MAXIMAL INTERCUSPAL POSITION

Hader bar: eponym for a rigid bar connector with two or more abutments, which, when viewed in cross section, resembles a
keyhole, consisting of a rectangular bar with a rounded occlusal ridge that creates a retentive undercut for the matrix clip within the removable prosthesis; orig, Helmut Hader, tool and die technician, Switzerland

hamburger notch: syn, PTERYGMOMAXILLARY NOTCH

haptic technology: a technology providing tactile, vibration, or motion feedback relative to a digital presentation

hard palate \\h\text{hard pālˈtā\}; the bony portion of the roof of the mouth

healing abutment: any dental implant abutment used for a limited time to assist in healing or modification of the adjacent tissues; syn, INTERIM IMPLANT ABUTMENT; comp, HEALING SCREW

healing component: syn, INTERIM IMPLANT ABUTMENT

healing screw \\h\text{heɪlɪŋ skrōʊˈ}; the component of an endosteal dental implant system used to seal, usually on an interim basis, the dental implant during the healing phase after surgical placement; the purpose of the healing screw is to maintain patency of the internal threaded section for subsequent attachment of the abutment during the second stage surgery or until restored; comp, HEALING ABUTMENT

heat-activated polymerization: in resins, a thermal activation of smaller molecular chain molecules to form a larger molecular chain; heat activates the benzyl peroxide, an initiator, which will react with the methylmethacrylate monomer to form poly-methylmethacrylate; syn, POLYMERIZATION

heat cured slang: syn, HEAT-ACTIVATED POLYMERIZATION, POLYMERIZATION

heat-pressed ceramics: a ceramic material used to cast, in a molten phase, into a refractory mold

heel n: slang: comp, DISTAL

height of contour \\h\text{hɪt ʌ vəʊ kənˈtɔːr ˈː\}; a line encircling a tooth and designating its greatest circumference at a selected axial position determined by a dental surveyor; a line encircling a body designating its greatest circumference in a specified plane; syn, SURVEY LINE

HEMA: acronym for hydroxyethyl methacrylate; with the addition of glutaraldehyde, it is one of the agents used in dentin-bonding; polymerizes to form the polymer polyhydroxyethylmethacrylate

hemiglossectomy \\h\text{hɛmɪ ˈglosˌsɛktˈə mɛ\}; n: resection of one side of the tongue

hemisection \\h\text{hɛmɪˈsɛkˈʃon}; n: the surgical separation of a multi-rooted tooth, especially a mandibular molar, through the furcation in such a way that a root and the associated portion of the crown may be removed or the roots restored as individual crowns

hemostatic agent: any chemical, such as aluminum chloride or ferric sulfate, that acts to control soft-tissue hemorrhage during impression making and restoration placement

hetero- \\h\text{hɛtər o-}; a prefix indicating a graft taken from another species; comp, XENOGRAFT

heterotopic pain \\h\text{hɛtər oˈtɒpɪk pənˈ]; a general term designating pain felt in an area other than the true originating site

Hader bar • House classification

high fusing ceramics: a ceramic material with a maturation or fusion range of 1315° to 1370° C (2350° to 2500° F)

high fusing solder: any soldering alloy formulated to melt at approximately 1100° C (2100° F) used to form connectors before ceramic application

high lip line \\h\text{hɪ ˈlip lɪnˈ}; the greatest height to which the inferior border of the upper lip is capable of being raised by muscle function

high noble metal alloy: as classified by the American Dental Association (1933), any dental casting alloy with at least 62% noble metal (Au, Pt, Rh, Ru, Ir, Os) by weight with at least 40% gold; comp, NOBLE METAL ALLOY

hinge axis: syn, TRANSVERSE HORIZONTAL AXIS

hinge axis of the mandible: syn, TRANSVERSE HORIZONTAL AXIS

hinge axis point: syn, POSTERIOR REFERENCE POINTS

hinge bow: syn, KINEMATIC FACEBOW

hinge joint \\h\text{hɪnʤ jɔɪntˈ}; a ginglymus joint; a joint that allows motion in one axis

hinge movement: rotation around a transverse axis; comp, TRANSVERSE HORIZONTAL AXIS

hinge position \\h\text{hɪnʤ paˈziːnˈænˈ}; obs: the orientation of parts in a manner permitting hinge movement between them (GPT-4)

homograft \\h\text{hoʊ ˈma-græftˈ}; n (1923): a graft taken from one human and transplanted to another; syn, ALLOGRAFT

horizontal axis of the mandible: syn, TRANSVERSE HORIZONTAL AXIS

horizontal condylar inclination: acronym is HCI; syn, SAGITTAL CONDYLAR INCLINATION

horizontal overlap \\h\text{hoʊrˈɪ zɔnˈtl, hɔrˈ-əˈver-ˈlæpˈ}; the projection of teeth beyond their antagonists in the horizontal plane

horizontal plane \\h\text{hoʊrˈɪ zɔnˈtl, hɔrˈ-plænˈ}; any plane passing through the body at right angles to both the median and frontal planes, thus dividing the body into upper and lower parts; in dentistry, the plane passing through a tooth at right angles to its long axis

horizontal plane of reference \\h\text{hoʊrˈɪ zɔnˈtl, hɔrˈ-plan ˈrɛf ˈɛr-ɑnˈ, rɛf rənsˈ}; a horizontal plane established on the face of the patient by one anterior reference point and two posterior reference points from which measurements of the posterior anatomic determinants of occlusion and mandibular motion are made

horizontal reference plane: syn, HORIZONTAL PLANE OF REFERENCE

horseshoe plate \\h\text{hɔrsˈʃʊə, hɔrʃˈ-plætˈ}; obs, slang: a U-shaped major connector for a removable prosthesis

host site: syn, RECIPIENT SITE

Hounsfield scale: a linear radiodensity scale range in Hounsfield units (HU) represented by water (0 HU) and air (1000 HU); used in CT, but not CBCT; orig, Godfrey N Hounsfield, electrical engineer, United Kingdom, 1975

House classification: the classification of a patient’s personality into four categories: hysterical, exacting, indifferent, and philosophical; orig, Dr Ewell Neil, dentist, U.S.A.

House MM. Prepared from the notes of Study Club by Conley FJ, Dunn AL, Quesnell AJ, and Rogers RM, No. 1; 1950
House classification • imbrication lines

hue \ɪˈhuː\ n; often referred to as the basic color, hue is the quality of sensation according to which an observer is aware of the varying wavelengths of radiant energy; the dimension of color dictated by the wavelength of the stimulus that is used to distinguish one family of color from another—as red, green, blue, etc; the attribute of color by means of which a color is perceived to be red, yellow, green, blue, purple, etc. White, black, and gray possess no hue

hybrid \ˈhaɪbrɪd\ n 1. anything of mixed origin; 2. offspring of two plants or animals of different genus or species

hybrid denture \ˈhaɪbrɪd dɛnˈtʃʊr\ slang; used to describe a removable or fixed denture that is composed of different materials, types of denture teeth (porcelain, plastic, composite resin), variable acrylic denture resins, differing metals or design, etc.; comp, FIXED COMPLETE DENTURE

hybrid ionomer \ˈhaɪbrɪd ɪˈəʊmər\ a conventional glass ionomer that has been modified to include methacrylate groups in the liquid component; may contain light-activated initiators; setting is by an acid-base reaction with light and dual polymerization; syn, RESIN-MODIFIED GLASS IONOMER; comp, GLASS IONOMER

hybrid prosthesis \ˈhaɪbrɪd prɒsˈθiːs\ slang: a nonspecific term applied to any prosthesis that does not follow conventional design; frequently used to describe a dental prosthesis that is composed of different materials, types of denture teeth (porcelain, plastic, composite resin), variable acrylic denture resins, differing metals or design, etc.; may refer to a fixed dental prosthesis, removable dental prostheses, or maxillofacial prostheses

hydrocolloid \ˈhaɪdru-kəˈloɪd\ n (1916): a colloid system in which water is the dispersion medium; those materials described as a colloid sol with water that are used in dentistry as elastic impression materials; comp, IRREVERSIBLE HYDROCOLLOID, REVERSIBLE HYDROCOLLOID

hydroxyapatite ceramics \ˈhaɪdrəʊ-ˈæpətɪt\ saɪˈkɛmɪs\ a composition of calcium and phosphate in physiologic ratios to provide a dense, non-resorbable, biocompatible ceramic material used for dental implants and residual ridge augmentation

hygienic pontic \ˈhaɪdʒɪnɪk\ \ˈpɒntɪk\ a pontic that is easier to clean because it has a convex-shaped cervical form and does not overlap the edentulous ridge as a concave-shaped cervical form

hygroscopic expansion \ˈhaɪdrəʊskəˈprɪk\ \ˈɪk-spənˈʃən\ expansion as a result of the absorption of moisture

hypalgesia \ˈhaɪpəlˈdʒiə\ n; diminished sensitivity to pain

hyperactivity \ˈhaɪpərˈækтив\ \ˈtɪv\ n (1867): excessive motor activity; frequently, but not necessarily, associated with internal tension or a neurologic disorder; usually the movements are more rapid than customary for the person

hyperalgesia \ˈhaɪpər-əlˈdʒiə\ n; increased sensitivity or sensibility to pain; comp, PRIMARY HYPERALGESIA

hyperbaric chamber \ˈhaɪpərˈbaːrɪk\ an enclosed area in which a patient may be subjected to pressure of ambient gases greater than 1 atmosphere

hyperbaric oxygenation \ˈhaɪpər-əˈbærɪk\ ˈɒksəˈneɪʃən\ the administration of oxygen under greater than atmospheric pressure; syn, hyperbaric oxygen therapy

hypercementosis \ˈhaɪpər-sɪ-məntəs\ \ˈsɪs\ n: an excessive deposition of cementum

hyperesthesia \ˈhaɪpər-ɛsˈθɛstə\ n (1849): increased sensitivity to stimulation

hypernasality \ˈhaɪpər-ˈnæsələlt\ \ˈnɛsələlt\ n: a perceived voice quality in which the nasal cavity acts as a resonating cavity for non-nasal sounds; generally associated with palatopharyngeal inadequacy

hyperplasia \ˈhaɪpər-pləsə\ n (1861): the abnormal multiplication or increase in the number of normal cells in normal arrangement in a tissue

hyperplasia of the coronoid process: pathologic growth of the coronoid process of the mandible after normal growth has ended; syn, OSTEOMA OF THE CORONOID

hyperplastic tissue \ˈhaɪpər-pləsɪk\ \ˈtɪsk\ tɪʃ\ ˈoʊs\ excessive tissue proliferation, usually as a response to chronic irritation

hypertrophy \ˈhaɪpər-ˈtraʊfri\ n (1834): an enlargement or overgrowth of an organ or tissue beyond that considered normal as a result of an increase in the size of its constituent cells and in the absence of tumor formation

hypodontia \ˈhaɪpədəntiə\ n; congenital absence of one or more, but not all, of the normal complement of teeth

hypoaesthesis \ˈhaɪpə-əˈɛstθɛsɪs\ n; diminished sensitivity to stimulation

hypoesthesia \ˈhaɪpə-əˈɛstθɛsɪs\ n: diminished acuteness of the sense of taste; syn, HYPOGEUSESTHESIA

hyponasality \ˈhaɪpən-ˌnæsələlt\ \ˈnɛsələlt\ n: reduced nasal resonance usually from obstruction in the nasopharynx or nasal passages resulting in an alteration of m, n, and -ng sounds

hypoplasia \ˈhaɪpəˌpləsə\ n (1889): defective or incomplete development of an organ or tissue

hysteresis n: the lagging or delay in the effect of a system’s change; in dentistry, the effect of cooling and reheating of a casting investment can cause casting inaccuracy because the refractory and binder will not revert to their original forms

I-bar clasp: an infrabulge retentive clasp that resembles an “I” as it approaches perpendicular to the facial height of contour; comp, CLASP

iatrogenic \ˈɪətrəˈdʒɛntɪk\ \ˈɛd\ (1924): resulting from the activity of the clinician; applied to disorders induced in the patient by the clinician

idiopathic \ˈɪdɪəˈpæθɪk\ \ˈɛd\ (1669): self-originated; of unknown causation

illuminance \ˈɪləmənəns\ \ˈɛn\ (ca. 1938): 1. density of luminous flux on a surface; 2. luminous flux incident per unit area of a surface

illuminant \ˈɪləmənənt\ \ˈɛd\ (15c): mathematical description of the relative spectral power distribution of a real or imaginary light source; i.e., the relative energy emitted by a source at each wave length in its emission spectrum; comp, CIE STANDARD ILLUMINANT

image registration: conforming different images or sources into one coordinate system

image scaling: changing the size of a digital image

imbibition n: the act or process of imbibing or absorbing; in dentistry, an example is the absorption of water in hydrocolloid impression materials when stored in water and the resultant dimensional change that occurs

imbrication lines: lines in the dentin caused by changes in mineralization during formation; syn, incremental lines of Von...
imbrication lines • impression compound

**implant prosthodontics** โอม plont prōs-thā-dōn’tik’s: the selection, planning, development, placement, replacement of missing teeth and/or associated structures, and maintenance of restoration(s) with dental implants

**implant stability quotient:** acronym is ISQ; the result of a radiofrequency analysis that measures the stability of an implant at one point in time on a scale between 0 and 100

**implant substructure** โอม plont sūb’strōk’ chur’: slang; the metal implantable component of an epoestal dental implant that is embedded beneath the soft tissues, in contact with the bone, and stabilized by means of endosteal screws; the periosteal tissues retain the framework to the bone; the framework supports the prosthesis, frequently by means of dental implant abutments and other superstructure components; syn, SUBPERIOSTEAL DENTAL IMPLANT SUBSTRUCTURE; comp, SUBPERIOSTEAL DENTAL IMPLANT SUPERSTRUCTURE

**implant-supported bar connector:** a bar connector that receives and stabilizes from the dental implants through the dental implant abutments; syn, BAR CONNECTOR, MESOSTRUCTURE; comp, FRAMEWORK

**implant-supported crown** โอม plont’ kroun’: an artificial crown that receives support and stability from a dental implant; syn, ARTIFICIAL CROWN, DENTAL PROSTHESIS

**implant-supported denture** โอม plont’ dên chur’: dental prosthesis, such as fixed complete denture, fixed partial denture, removable complete overdenture, removable partial overdenture, as well as maxillofacial prostheses, which can be supported and retained in part or whole by dental implants

**implant-supported prosthesis** โอม plont’ prōs-thē’sis: dental prosthesis, such as artificial crown, fixed complete denture, fixed partial denture, removable complete overdenture, removable partial overdenture, as well as maxillofacial prosthesis, which are supported and retained in part or whole by dental implants; *Editorial note for usage:* terminology to assist in understanding the means of retention and support should be limited to concatenation of three and no more than four adjectives to provide clarity; descriptive terminology may include the method of retention, composition, nature of support, design characteristics, and form of anchorage

**implant surgery** โอม plont sūr’ ja-rē’ (1993): the phase of implant dentistry concerning the selection, planning, and placement of the implant body and abutment

**implantology** โอม plān-tōl’a-gēl’ obs: a term historically conceived as the study or science of placing and restoring dental implants; comp, IMPLANT DENTISTRY, IMPLANT SURGERY, IMPLANT PROSTHODONTICS

**implement** m: syn, DEVICE

**impression** โอม prēsh’an (14c): a negative likeness or copy in reverse of the surface of an object; an imprint of the teeth and adjacent structures for use in dentistry; comp, ALTERED CAST PARTIAL DENTURE IMPRESSION, COPING IMPRESSION, DENTAL IMPRESSION, DIRECT BONE IMPRESSION, IMPRESSION AREA, IMPRESSION MATERIAL, IMPRESSION TRAY, MASTER IMPRESSION, PARTIAL DENTURE IMPRESSION, PICK-UP IMPRESSION, PRELIMINARY IMPRESSION, SECTIONAL IMPRESSION, TUBE IMPRESSION

**impression area** โอม prēsh’an ār’ē-a: the surface that is recorded in an impression

**impression compound** slang: syn, MODELING PLASTIC IMPRESSION COMPOUND

**Ebner; orig. Anton Gilbert Victor von Ebner,** histologist, Austria, 1842-1925

**immediate denture** โอม mē-dē-it dēn chur’: any fixed or removable dental prosthesis fabricated for placement immediately following the removal of a natural tooth/teeth

**immediate discclusion** โอม mē-dē-it dī’s’ klōō’ shun: instantaneous separation of the posterior teeth as a result of the anterior guidance

**immediate disclusion** โอม mē-dē-it dī’-a-klōō’ shun: NONSTAND: syn, IMMEDIATE DISCLUSION

**immediate insertion denture:** syn, IMMEDIATE DENTURE

**immediate lateral translation:** syn, IMMEDIATE MANDIBULAR LATERAL TRANSLATION

**immediate mandibular lateral translation** โอม mē-dē-it mān-dī’-bā’-ya-lar lā’/ar-trān’s-ā’ shun: acronym is IMLT; the translatory portion of lateral movement in which the nonworking-side condyle appears to move essentially in a straight line and medially, on a 2D tracing, as it leaves the centric relation position; comp, EARLY MANDIBULAR LATERAL TRANSLATION; PROGRESSIVE MANDIBULAR LATERAL TRANSLATION

**immediate obturator:** syn, SURGICAL OBTURATOR

**immediate replacement denture:** syn, IMMEDIATE DENTURE

**immediate side shift** substand: syn, IMMEDIATE MANDIBULAR LATERAL TRANSLATION

**immediate temporary obturator:** syn, INTERIM OBTURATOR, SURGICAL OBTURATOR

**impacted fracture** โอม mā-pāk tīch: a fracture in which one fragment is driven into another portion of the same or an adjacent bone

1 implant โอม plont’ vt (1890): to graft or insert a material such as an alloplastic substance, an encapsulated drug, or tissue into the body of a recipient

2 implant โอม plont’ n (1890): any object or material, such as an alloplastic substance or other tissue, which is partially or completely inserted or grafted into the body for therapeutic, diagnostic, prosthetic, or experimental purposes; syn, DENTAL IMPLANT

**implant connecting bar** slang; *Editorial note for usage:* a connecting bar is not an implantable device; syn, BAR CONNECTOR; comp, FRAMEWORK, MESOSTRUCTURE

**implant crown** โอม plont’ kroun: slang; *Editorial note for usage:* a crown is not an implantable device; syn, CROWN, IMPLANT-SUPPORTED CROWN

**implant dentistry** โอม plont’ dēn tī-stē’rē: comp, IMPLANT PROSTHODONTICS

**implant denture** โอม plont’ dēn chur’ slang; *Editorial note for usage:* a denture is not an implantable device; syn, PROSTHESIS

**implant fixture** slang, obs: syn, DENTAL IMPLANT

**implant index cast:** a gypsum cast with dental implant replicas that is useful in facilitating subsequent transfers and verification of implant-to-implant relationship; *Editorial note for usage:* an index cast may be a definitive or master cast if it replicates anatomy of the patient; it is an index cast (not a definitive or master cast) without the replication of anatomy; syn, VERIFICATION CAST

**implant indexing device:** used to make a registration record, or index, of dental implant positioning useful in facilitating subsequent transfers and verification of implant-to-implant relationship

**implant interface** โอม plont’ in’ ter-fā’-sē: the junction of the surface of a dental implant and the surrounding host tissues; syn, OSSEOINTEGRATION

**implant prosthesis** โอม plont’ prōs-thē’sis: slang; syn, IMPLANT-SUPPORTED PROSTHESIS, PROSTHESIS
impression material • initiator

impression material 验证码 any substance or combination of substances used for making an impression or negative reproduction

impression post: used to facilitate transfer of the intraoral location of an implant or abutment to the relative position on a laboratory cast; it may screw into the dental implant or the dental abutment and is customarily subdivided into implant or abutment types; syn, IMPRESSION TRANSFER COPINGS; comp, impression cap, IMPRESSION COPING, transfer aid, TRANSFER COPING

impression surface 验证码 the portion of the denture surface that has its contour determined by the impression

impression technique 验证码 a method and manner used in making a negative likeness; 2. a device that is used to carry, confine, and control impression material while making an impression

impression wax: syn, DENTAL IMPRESSION WAX

IMRT: acronym for INTENSITY-MODULATED RADIATION THERAPY

incisal guidance 验证码 1. the influence of the contacting surfaces of the mandibular and maxillary anterior teeth on mandibular movements; 2. the influences of the contacting surfaces of the guide pin and guide table on articulator movements

incisal guide 验证码 the part of an articulator that maintains the incisal guide angle (GPT-4) syn, ANTERIOR GUIDE TABLE

incisal guide angle 验证码 1. anatomically, the angle formed by the intersection of the plane of occlusion and a line within the sagittal plane determined by the incisal edges of the maxillary and mandibular central incisors when the teeth are in maximal intercuspal position; 2. on an articulator, that angle formed, in the sagittal plane, between the plane of reference and the slope of the anterior guide table, as viewed in the sagittal plane

incisal guide pin: syn, ANTERIOR GUIDE PIN

incisal guide table: syn, ANTERIOR GUIDE TABLE

incisal porcelain: a porcelain blend used for the incisal portion of a ceramic crown restoration; comp, BODY PORCELAIN, GINGIVAL PORCELAIN, SHOULDER PORCELAIN

incisal reduction: the amount of tooth structure removed at the incisal edge as a result of tooth preparation; comp, AXIAL REDUCTION, ESTHETIC RESHAPING, OCCLUSAL REDUCTION, OCCLUSAL RESHAPING

incisal rest 验证码 a rigid extension of a removable partial denture that contacts a tooth at the incisal edge

incisal restoration 验证码 any restoration extending along the incisal edge of a tooth

incisive foramen 验证码 a foramen located in the midline on the anterior of the hard palate; it transmits the nasopalatine nerves and vessels; syn, NASOPALATINE FORamen

incisive papilla 验证码 the elevation of soft tissue covering the foramen of the incisive or nasopalatine canal

incisor: anterior tooth located mesial to the canines that is adapted for cutting

inclined plane 验证码 any of the inclined cuspal surfaces of a tooth

incorporation 验证码 inability to move in a smooth, controlled, symmetrical movement

index 验证码 a core or mold used to record or maintain the relative position of dental implants or teeth, to a cast, or to some other structure; comp, IMPLANT INDEXING DEVICE, RECORD

indirect fracture 验证码 a fracture at a point distant from the primary site of injury as a result of secondary forces; comp, FRACTOGRAPHY

indirect pulp capping 验证码 a procedure that seeks to stimulate formation of reparative dentin by placing a material over sound or carious dentin

indirect retainer 验证码 the component of a removable partial denture that assists the direct retainer(s) in preventing displacement of the distal-extension denture base by functioning through lever action on the opposite side of the fulcrum line when the denture base attempts to move away from the tissues in pure rotation around the fulcrum line

indirect retention 验证码 the effect achieved by one or more indirect retainers of a removable partial denture that reduces the tendency for a denture base to move in an occlusal direction or in a rotational path about the fulcrum line

indurate 验证码 any of the inclined cuspal surfaces of

infraocclusion 验证码 the establishment plane of occlusion

infraocclusion clasp 验证码 a retentive clasp that approaches the retentive undercut from a cervical or infrabulge direction

infraeruption 验证码 failure in eruption of a tooth to the established plane of occlusion

infraocclusion 验证码 malocclusion in which the occluding surfaces of teeth are below the normal plane of occlusion and lacking occlusal contact area

infrared radiation 验证码 electromagnetic radiation of wavelengths between 760 nm and 1000 nm

infrared soldering: joining the components of a fixed dental prosthesis (between retainers or retainer and pontic) with a specially designed unit that uses infrared light as its heat source; comp, OVEN SOLDERING

infrared soldering: the component of a removable partial denture that assists the direct retainer(s) in preventing displacement of the distal-extension denture base by functioning through lever action on the opposite side of the fulcrum line when the denture base attempts to move away from the tissues in pure rotation around the fulcrum line

infrastructure 验证码 a metal or ceramic framework onto which a second framework or prosthesis will be placed

ingot 验证码 1. a mold in which metal is cast; 2. a mass of metal cast into a shape convenient for storage and measure that can be remelted for later casting

initial occlusal contact 验证码 during closure of the mandible, the first or initial contact of opposing teeth between the arches

initiator: in polymerization, it is a molecule that is activated by light, heat, or a chemical that reacts to produce a chemical chain reaction;
camphoroquinone is a light-activated initiator, benzoyl peroxide is a heat-activated initiator, and tertiary amine is the chemical activator for the initiation of benzoyl peroxide to undergo a chemically-activated atom transfer radical addition polymerization (ATRAP).

injection molding: 

yn-jēk’shun mōl’ding: the adaptation of a plastic material to the negative form of a closed mold by forcing the material into the mold through appropriate gateways; comp, COMPRESSION MOLDING, injection denture, pour denture

inlay 
yīn-lāː, ˈin-lāː n (250 BCE-900 CE Mayan culture): a fixed intracoronal restoration; a dental restoration made outside of a tooth to correspond to the form of the prepared cavity, which is then luted into the tooth

inlay wax: syn, CASTING WAX

insertion: syn, PLACEMENT

instantaneous axis of rotation: 
yīn stan-ˈtā-nē-əs ˈäk sēs ˈuv rō-tā´shun: the hypothetical center of rotation of a moving body, viewed in a given plane, at any point in time; for any body that has planar motion, there exists, at any instant, some points that have zero velocity and will be fixed at a given instant; the line joining these points is the instantaneous axis of rotation; the intersection of this line with the plane of motion is called the instantaneous center of rotation

instrument: 
yīnˈstra-menˈtər n: a tool or implement, especially one used for delicate work or for artistic or scientific purposes; syn, DEVICE

intaglio: yīnˈtāl-yō, -ˈtāl-ˈn (1644): 1. an incised or engraved figure in stone or any hard material depressed below the surface of the material such that an impression from the design would yield an image in relief; 2. something carved in intaglio, -ˈtāl-ˈiəs -ˈtāl-ˈəs pl

intaglio surface: yīnˈtāl-yō, -ˈtāl-ˈsür ˈfa:sə the portion of the denture or other restoration surface that has its contour determined by the impression; the interior or reversal surface of an object

integration: comp, FIBROUS INTEGRATION, OSSEOINTEGRATION, TISSUE INTEGRATION

intensity-modulated radiation therapy: acronym is IMRT; computer optimized, precision delivery of radiation therapy; comp, stereotactic body radiation therapy (SBRT)

interalveolar space: syn, INTERARCH DISTANCE

interarch distance: yīnˈter-ˈa-rē ə the interridge distance; the vertical distance between the maxillary and mandibular dentate or edentulous arches under specified conditions; comp, REDUCED INTERARCH DISTANCE

interarch expansion device: slang: syn, OCCLUSAL DEVICE

interceptive occlusal contact: slang: syn, DEFLECTIVE OCCLUSAL CONTACT

intercondylar: yīnˈter-kōnˈda-lər adj: situated between two condyles

intercondylar axis: syn, CONDYLAR AXIS

intercondylar distance: yīnˈter-kōnˈda-lər dəˈtansə: the distance between the rotational centers of two condyles or their analogues

intercuspal: yīnˈter-kūsˈpäl kōnˈtakt: the contact between the cusps of opposing teeth

intercuspal contact area: yīnˈter-kūsˈpäl kōnˈtakt ərˈe-ə: the range of tooth contacts in maximal intercuspal position

intercuspal occlusion: syn, MAXIMAL INTERCUSPAL POSITION

intercuspal position: syn, MAXIMAL INTERCUSPAL POSITION

intercuspation: yīnˈter-kūsˈpaːʃanˈtər n: the proximity of cusps of opposing teeth

interdental: yīnˈter-dēnˈtəl adj: between the proximal surfaces of the teeth within the same arch

interdental gingival space: any interproximal soft tissue loss as a result of periodontal disease, traumatic, mechanical or chemical preparation or crown lengthening procedures; syn, GINGIVAL EMBRASURE

interdental papilla: yīnˈter-dēnˈtəl paˈpilə a projection of the gingiva filling the space apical to the proximal contact area of two adjacent teeth

interdental space: comp, DIASTEMA, INTERARCH DISTANCE, INTERDENTAL GINGIVAL SPACE, INTERPROXIMAL SPACE

interdental splint: yīnˈter-dēnˈtəl splĭntə a splint for treatment of fractures and consisting of a metal or acrylic resin device that is wired to the teeth in the maxillae and mandible and joined to keep the segments immobile; syn, GUNNING’S SPLINT

interdigiﬁed occlusion: n, slang: Editorial note for usage: teeth do not interdigitate, but are intercuspated, ﬁngers are interdigitated; comp, MAXIMAL INTERCUSPAL POSITION

interference: yīnˈter-fiˈrənsə n (1783): in dentistry, any tooth contact that interferes with or hinders harmonious mandibular movement; an undesirable tooth contact

interim denture: syn, INTERIM PROSTHESIS

interim obturator: yīnˈter-im ˈōbˈtā-ˈrō-tər noun: a maxillofacial prosthesis, which is made following completion of initial healing from the surgical resection of a portion or all of one or both maxillae; this prosthesis replaces the surgical obturator, which is usually inserted at or immediately following the resection; generally, an interim obturator is made to facilitate closure of the resultant defect after initial healing has been completed; Editorial note for usage: unlike the surgical obturator, which usually is made prior to surgery and frequently revised in the operating room during surgery, the interim obturator is made when the defect margins are clearly deﬁned and further surgical revisions are not planned; it is a provisional prosthesis; also, it frequently must be revised (termed an obturator prosthesis modiﬁcation) during subsequent dental procedures (i.e., restorations, gingival surgery, etc.) as well as to compensate for further tissue shrinkage before a deﬁnitive obturator prosthesis is made; comp, OBTURATOR PROSTHESIS MODIFICATION, SURGICAL OBTURATOR

interim ocular prosthesis: yīnˈter-im ˈōk-ˈyā-ˈlər prōs-thēˈsis noun: an interim replacement generally made of clear acrylic resin for an eye lost as a result of surgery or trauma; no attempt is made to reestablish esthetics; syn, CONFORMER, OCULAR CONFORMER, SECTION

interim palatal lift prosthesis: syn, PALATAL LIFT PROSTHESIS

interim prosthesis: yīnˈter-i prōs-thēˈsis noun: a fixed or removable dental prosthesis, or maxillofacial prosthesis, designed to enhance esthetics, stabilization, and/or function for a limited period of time, after which it is to be replaced by a definitive dental or maxillofacial prosthesis; often such prostheses are used to assist in determination of the therapeutic effectiveness of a speciﬁc treatment plan or the form and function of the planned for deﬁnitive prostheses; syn, PROVISIONAL PROSTHESIS, PROVISIONAL RESTORATION

interlock: yīnˈter-lōk ˈni (1874): a device connecting a ﬁxed unit or a removable dental prosthesis to another ﬁxed unit

interlocking cast core: a foundation restoration for an endodontically treated, multi-rooted tooth that comprises multiple castings to engage divergent roots

intermaxillary ﬁxation: acronym is IMF; syn, MAXILLOMANDIBULAR FIXATION

intermaxillary record: slang, obs: Editorial note for usage: this is not a relationship record between maxillae; syn, JAW RELATION RECORD, MAXILLOMANDIBULAR RELATIONSHIP RECORD

THE JOURNAL OF PROSTHETIC DENTISTRY
intermaxillary relation • irreversible hydrocolloid

intermaxillary relation slangs: syn, JAW RELATION RECORD, MAXILLOMANDIBULAR RELATIONSHIP

intermediary jaw movement 'vn-ter-me’dé-ér’e jō mōov ment’ obs, nonstand: all movements between the extremities of mandibular excursions (GPT-3); comp, ECCENTRIC OCCLUSION, MAXIMAL INTERCUSPAL POSITION

intermediate abutment 'vn-ter-me’dé-it a-bú’t’ment’: a natural tooth or implant abutment that is located between terminal abutments that serve to support a fixed or removable dental prosthesis

internal attachment: comp, PRECISION ATTACHMENT, SEMI-PRECISION ATTACHMENT

internal connector 'vn-tůr’nal ka-něk’tor’: a nonrigid connector of varying geometric designs that uses a matrix to unite the members of a fixed partial denture

internal derangement 'vn-tůr’nal dǐ-rănj’ment’: syn, TEMPOROMANDIBULAR JOINT DERANGEMENT

internal rest: comp, PRECISION REST, SEMIPRECISION REST

interocclusal 'vn-ter-a-kľőo’sal adj: between the occlusal surfaces of opposing teeth

interocclusal clearance 'vn-ter-a-kľőo’sal kľ’r’ans’: the amount of reduction achieved during tooth preparation to provide for an adequate thickness of restorative material; comp, INTEROCCLUSAL DISTANCE

interocclusal distance 'vn-ter-a-kľőo’sal dǐ’s’tan$: the distance between the occluding surfaces of the maxillary and mandibular teeth when the mandible is in a specified position; comp, INTEROCCLUSAL REST DISTANCE

interocclusal gap obs: syn, INTEROCCLUSAL REST SPACE

interocclusal record 'vn-ter-a-kľőo’sal rěk’ārd’: a registration of the positional relationship of the opposing teeth or arches; a record of the positional relationship of the teeth or jaws to each other

interocclusal rest distance: the difference between the rest vertical dimension and the occlusal vertical dimension; syn, INTEROCCLUSAL REST SPACE; comp, INTEROCCLUSAL DISTANCE

interocclusal rest space 'vn-ter-a-kľőo’sal rěst spās’: syn, INTEROCCLUSAL REST SPACE

interpenetrating phase composite: the penetration of a porous ceramic material by melted glass or by a polymer that can render a tougher dental material

interproximal contact area 'vn-ter-prŏk’sa-mal kŏn’tākt’: the area of a tooth that is in close association, connection, or contact with an adjacent tooth in the same arch; syn, CONTACT AREA

interproximal space 'vn-ter-prŏk’sa-mal spās’: the space between adjacent teeth in a dental arch. It is divided into the embrasure space, occlusal to the contact point, and the septal space, gingival to the contact point; comp, GINGIVAL EMBRASURES, OCCLUSAL EMBRASURES

intradiastinal space: the space between roots of adjacent teeth in a dental arch

intraclassic distance: syn, INTERARCH DISTANCE

intracapsular adhesion 'vn-tra-kăp’sa-lar ād-hē’zhen$: adhesions occurring within the joint capsule, resulting in reduced mobility

intracapsular ankylosis 'vn-tra-kăp’sa-lar āŋ ka-lō’siːs’: diminished joint motion as a result of disease, injury, or a surgical procedure within a joint capsule

intracapsular disorder 'vn-tra-kăp’sa-lar dĭs-ör’der’: a problem associated with the masticatory system in which the etiological factors are located within the temporomandibular joint capsule

intracapsular fracture 'vn-tra-kăp’sa-lar frăk’chur$: a fracture of the condyle of the mandible occurring within the confines of the capsule of the temporomandibular joint; syn, INTRA-ARTICULAR FRACTURE

intracondyalar 'vn-tra-kŏn’dĭ lan’ adj: within the condyle

intracoronal 'vn-tra-kŎr-a-nal’ adj: 1. within the confines of the cusps and normal proximal/axial contours of a tooth; 2. within the normal contours of the clinical crown of a tooth

intracoronal attachment: any prefabricated or custom-made attachment for support and retention of a fixed or removable dental prosthesis; the patrix and matrix components are positioned within the normal contours of the abutment tooth; comp, EXTRACORONAL ATTACHMENT, PRECISION ATTACHMENT

intracutaneous 'vn-tra-myŏō-kō’sal adj: situated, formed by, or occurring within the mucosa

intracutaneous implant: syn, MUCOSAL INSERT

intracutaneous insert: syn, MUCOSAL INSERT

intraoral 'vn-tra-ŏr’al adj: within the mouth

intraoral tracing ‘vn-tra-ŏr’al træ-sîŋ’: a tracing made within the oral cavity; Editorial note for usage: extraoral tracing (ing), intraoral tracing (ing), and tracing device are the primary terms; comp, ARROW POINT TRACER, CENTRAL BEARING TRACING DEVICE, CEPHALOMETRIC TRACER, COBLE BALANCER, EXTRAORAL TRACER, GOTHIC ARCH TRACER, MANDIBULAR TRACER, NEEDLE POINT TRACING, PANTOGRAPHIC TRACING, STYLLUS TRACING, TRACING DEVICE

intraosseous ‘vn-tra-ŏs’ē-us’: within bone

intrinsic coloring ‘vn-trîn’zîk, -sîk kūl’är-īnɡ’: coloring from within; the incorporation of a colorant within the material of the prosthesis or restoration

intrusion ‘vn-trĭŏozhən$: movement of a tooth in an apical direction

invariant color match ‘vn-văr’-ē-ant kūl’är māch’: a perfect color match under all light conditions

inverted cusp tooth ‘vn-vĭr’tid kŭs pŏt’th’: obs: a nonanatomic posterior porcelain denture tooth that had circular indentations where cusps would normally be located

invest ‘vn-vĕst’: vb: to surround, envelop, or embed in an investment material; comp, VACUUM INVESTING

investing ‘vn-vĕs’t(ĭŋ): n: the process of covering or enveloping, wholly or in part, an object such as a denture, tooth, wax form, crown, etc., with a suitable investment material before processing, soldering, or casting

investment n: comp, DENTAL CASTING INVESTMENT, REFRACTORY INVESTMENT

investment cast ‘vn-vĕst’ment kăs’t: a cast made of a material that will withstand high temperature without disintegration; syn, REFRACTORY CAST

ion exchange strengthening ‘vn-ăn, ū-ăn’ ĭks-chăn’jĭ strĕŋgk’thān’ıŋ: the chemical process whereby the surface of a glass is placed in compression by the replacement of a small ion by a larger one while maintaining chemical neutrality

ionizing radiation ‘vn-ĭ-ziŋ ră dĕ-ă-shrăn$: any radiation capable of displacing electrons from atoms or molecules, thereby producing ions

iridescent ‘vn-ĭ-dĕs ant’ adj (1796): colors produced by interference, refraction, or diffraction

irreversible hydrocolloid ‘vn-ĭ-vĭr’sa-bal ă-ĭ-dra-kŏl’oid’: a hydrocolloid consisting of a sol of alginic acid having a physical state that is changed by an irreversible chemical reaction forming insoluble calcium alginate; syn, ALGINATE, DENTAL ALGINATE
ischemia (/ɪˈskɛə me-ə)n (ca. 1860): local and temporary deficiency of blood, chiefly resulting from the contraction of a blood vessel

isodose lines: a graphic curve when points of equal radiation therapy dosage are connected to form a line; an isodose chart is made with several isodose curves

isograft /ɪˈsɔ-graft/, n (1909): a graft from one individual to another with the same genetic basis, as in identical twins; syn, isogeneic graft, syngraft

isometric contraction /ɪs-əˈmɛt rɪk kɒn-trækʃən/: muscular contraction in which there is no change in the length of the muscle during contraction

isotonic contraction /ɪs-əˈtɒn ɪk kɒn-trækʃən/: muscular contraction in which there is a shortening of the length of the muscle while the muscle maintains a constant tension

isotope /ɪˈsə-top ə n (ca 1913): a chemical element having the same atomic number as another but possessing a different atomic mass

ISQ: acronym for IMPLANT STABILITY QUOTIENT

iterative reconstruction: non-linear inverse algorithms to create 3D images with incomplete data points; e.g., it is used in CBCT images

J

jacket crown obs, slang; syn, CERAMIC CROWN, RESIN CROWN

Jackson crib clasp obs: a one-piece clasp bent to engage the mesial and distal interproximal undercut in adjacent natural teeth; usually it was made by hand bending of a straight wire of appropriate dimensions; orig, V. H. Jackson, dentist, New York, NY, U.S.A.

Jackson magnet: eponym for permanent magnetic alloy magnets using rare earth metals adapted for oral use; orig, Thomas R. Jackson, dentist, U.S.A.

jaw /jɑː/ n (14c): the structure bearing the teeth; syn, MANDIBLE, MAXILLAE

jaw malposition /jɔː mælˈpɑːzɪʃən/ obs: any abnormal position of the mandible (GPT-3)

jaw movement: syn, MANDIBULAR MOVEMENT

jaw record: syn, MAXILLOMANDIBULAR RELATIONSHIP RECORD

jaw relation: syn, MAXILLOMANDIBULAR RELATIONSHIP

jaw relation record: syn, MAXILLOMANDIBULAR RELATIONSHIP RECORD; comp, CENTRIC RELATION RECORD, CENTRIC RELATION INTEROCCLUSURAL RECORD

jaw repositioning: syn, MANDIBULAR REPOSITIONING

jig /jɪɡ/ a device used to maintain mechanically a positional relationship between a piece of work and a tool or between components during assembly or alteration; syn, INDEX, RECORD

joint /dʒɔɪnt/ n (13c): the place of union of two or more bones; comp, ARTRODIAL JOINT, COMPOUND JOINT, DIARTHRODAL JOINT, GINGLYMUS JOINT, SIMPLE JOINT, TEMPOROMANDIBULAR JOINT

joint crepitus /dʒərtkrəˈtʌs/ the grating sensation caused by the rubbing together of the bony surfaces of joints; syn, articular crepitus

joint derangement: syn, TEMPOROMANDIBULAR JOINT DERANGEMENT

joint photographic experts group (1992): acronym is JPEG; a common image filing format used in digital JPEG photography; JPEG 2000 offers improved image quality in better compression formats as compared with the standard JPEG

jump case slang: comp, REBASE, RELINE

junctival epithelium /jʊŋɡkˈʃuːn-əl / the single or multi-layer of non-keratinizing cells adhering to the tooth surface at the base of the gingival sulcus; attachment with hemidesmosomes and internal basal lamina; syn, EPITHELIAL ATTACHMENT

K

kaolin /kəˈa-lin/ n (1727): fine, usually white, clay that is used in ceramics and refractory materials as a filler or extender

keeper /kɛə ˈpar/ n (14c): any one of various devices used for keeping something in position; Editorial note for usage: in dentistry, this is usually construed to mean an alloy attached to one element of a restoration to which a magnet may adhere

Kelvin temperature: absolute temperature indicated by the symbol K; zero Kelvin = minus 273° C; orig, William Thomson (Lord Kelvin), mathematician/physicist, Irish born/Scotland, United Kingdom, 1824-1907

Kennedy bar: orig, Edward Kennedy, dentist, U.S.A.; syn, CONTINUOUS BAR CONNECTOR

Kennedy bar connector: orig, Edward Kennedy, dentist, U.S.A.; syn, CONTINUOUS BAR CONNECTOR

Kennedy classification of removable partial dentures: a classification of partially edentulous arches divisible into four classes. Class I: bilateral edentulous areas located posterior to the remaining natural teeth; Class II: a unilateral edentulous area located posterior to the remaining natural teeth; Class III: a unilateral edentulous area with natural teeth located both anterior and posterior to it; Class IV: a single bilateral edentulous area located anterior to the remaining natural teeth; edentulous areas, in addition to those determining the main types, were designated as modification spaces; orig, Edward Kennedy, dentist, U.S.A., variably dated 1923, 1925, and 1928; O. C. Applegate’s Rules govern application of the Kennedy system

keratin /ˈkɜːrət.ən/ n (1847): a protein present in all cuticular (cornified) structures of the body, such as hair, epidermis, horns, and the organic matrix of the enamel of the teeth

keratinization /ˈkɜːrət.ənɪˈzaʃən/ the process of maturation of keratinocytes; the formation of a protein layer (keratin) on the surface of some epithelia

keratinized gingiva /ˈkɜːrət.ən.ɪˌzi.ˈdʒɪnvə/ the oral surface of the gingiva extending from the mucogingival junction to the gingival margin; the pattern of keratinization may be ortho- or para-

keyway /ˈkeɪ.wə/ n, slang: an interlock with a matrix and patr ix between the units of a fixed partial denture; it may serve two functions: (1) to hold the pontic in the proper relationship to the
edentulous ridge and the opposing teeth during occlusal adjustment on the working cast (during application of any veneering material) and (2) to reinforce the connector after soldering; syn. ATTACHMENT

kinematic axis ḵin’a-māt’ık āk’sīːə; the transverse horizontal axis connecting the rotational centers of the right and left condyles

kinematic facebow ḵin’a-māt’ık fas-boʊ; (1924): a facebow with adjustable caliper ends used to locate the transverse horizontal axis of the mandible; orig. Beverly B. McCollum, dentist, U.S.A., 1921

kinematic facebow record: a registration obtained that relates the maxillary cast to the condylar elements of an articulator by using the transverse horizontal axis reference points; syn. FACEBOW RECORD

kinematics ḵin’a-māt’ıkəs; the phase of mechanics that deals with the possible motions of a material body

Kingsley splint ḵɪŋz’liː’ splɪnt; obs: eponym for a maxillary splint used to apply traction to reduce and immobilize maxillary fractures through wings attached to a head device by elastics; C. L. Goddard cites Dr Kingsley as first using “the occipital appliance” in 1866; orig. Norman William Kingsley, dentist, U.S.A., 1829-1913

Essig CJ. The American textbook of prosthetic dentistry. Philadelphia: Lea Brothers; 1896:204

Kingsley NW. Oral deformities. 1866:134

knife-edge finish line: a clearly defined junction of prepared and unprepared tooth structure that lacks a concavity at the gingival margin; comp. BEVELED SHOULDER FINISH LINE, CHAMFER FINISH LINE, FEATHER-EDGE, SHOULDER FINISH LINE

Knoop hardness number: acronyım KHN; an eponym for a measure of hardness obtained with a diamond pyramid indenter and rhombic base with included angles of 172.5 and 130 degrees; KHN is the ratio of the applied load to the area of the indentation

Knoop hardness tests: eponym for a surface hardness test that uses a diamond stylus; used for harder materials and characterized by the diamond- or rhomboid-shaped indentation; the indentation micro-hardness test uses a rhombic-based pyramidal diamond indenter; the long diagonal of the resulting indentation is measured to determine the hardness; this test is suitable for most classes of materials including brittle and elastomeric; orig. Frederick Knoop, engineer, U.S.A.

Kubelka-Munk scattering coefficient: eponym for the multiple (diffuse) scattering coefficient for a unit of thickness and concentration of scattering material in a medium of a different refractive index as used in the Kubelka-Munk equation; it is the rate of increase of reflectance of a layer over black, as thickness is increased; hence, the assumption is made that the entire scattering is in the backward or reverse direction from that of the incident diffuse light; orig. P. Kubelka, 1948

Kubelka-Munk theory: eponym for a theory describing the optical behavior of materials containing small particles that scatter and absorb radiant energy; it is widely used for color matching

THE JOURNAL OF PROSTHETIC DENTISTRY Volume 117 Issue 5S

keyway • lateral checkbite

labial /ˈlaːbəl/ adj (1594): 1. of or pertaining to the lip; 2. toward the lip; comp. BUCCAL, FACIAL

labial bar: syn. LABIAL BAR CONNECTOR

labial bar connector /ˈlaːbəl bær kə-nɛkˈtɔːr/: a major connector located labial to the dental arch

labial flange /ˈlaːbəl flæŋːə/: the portion of the flange of a denture that occupies the labial vestibule of the mouth

labial splint /ˈlaːbəl splɪnt/: a device of plastic, metal, or both, made to conform to the outer aspect of the dental arch and used in the management of jaw and facial injuries

labial vestibule /ˈlaːbəl vɛsʔə-byʊʊlə/: the portion of the oral cavity that is bounded on one side by the teeth, gingiva, and alveolar ridge (in the edentulous mouth, the residual ridge) and on the other by the lips anterior to the buccal frenula

labioversion /ˈlaːbə-oʊ-vɜr ˈʃun/ n: labial position of a tooth beyond the normal arch form

laboratory prescription slang: syn. LABORATORY WORK AUTHORIZATION, WORK AUTHORIZATION

laboratory work authorization: a signed written order provided by the dentist to the dental laboratory detailing the work to be performed; a component of the patient’s dental record specifying the design and materials to be used; syn. WORK AUTHORIZATION

lamina dura /ˈlaːmə ˈnɑː dʊrəː/: the layer of compact bone forming the wall of a tooth alveolus

land area /ˈlænd ərəː/ː the portion of a dental cast that extends beyond the impression’s replica surface laterally that defines the area between the end of the replica’s surface and the cast base

lap /ˈlæp/ vb (14c): 1. to fold over or around something; to wind about; to envelop entirely; 2. to fold over in successive layers; 3. to place over and cover a part of another; 4. to dress smooth or to polish to a high degree by working two surfaces together with or without abrasives until a very close fit is achieved; lapped /ˈlæpt/ adj:

lapping /ˈlæŋg/ vt

lapping device /ˈlæŋg ˈdəvərs/ n: a device used to dress smooth or polish by working two surfaces together

laser /ˈlæzər/ n (1957): acronyım for light amplification by stimulated emission of radiation; a device that transforms light of various frequencies into an intense, small, and nearly non-divergent beam of monochromatic radiation, within the visible range

laser scanner: a 3D scanner measuring the distance to an object surface by triangulation mechanism

laser sintering: syn. SELECTIVE LASER SINTERING

laser therapy /ˈlæzər ˈθɛrəˈpeɪər/ː the use of laser energy in the treatment of tissue pathosis

laser welding /ˈlæzər ˈwelŋdərn/ː the joining of metal components through the use of heat generated with a laser beam

late closing click /ˈlæt kloʊ ˈziŋ klik/ː the sound emanating from the temporomandibular joint that occurs just prior to termination of closure in some patients with anteriorly displaced discs

late opening click /ˈlæt ˈoʊnˈpiŋ klik/ː the sound emanating from the temporomandibular joint that occurs just prior to termination of opening in some patients with anteriorly displaced discs

lateral /ˈlætər-əl/ adj (15c): 1. positions either right or left of the midsagittal plane; 2. denotes a position farther from the median plane or midline of the body or structure

lateral checkbite slang: syn. LATERAL INTEROCCLUSAL RECORD
lateral condylar inclination: the angle formed by the path of the moving condyle within the horizontal plane compared with the median plane (anterior-posterior movement) and within the frontal plane when compared with the horizontal plane (superior-inferior movement); comp, LATEROTRUSION

lateral condylar path: the path of movement of the nonworking condyle-disc assembly in the joint cavity when a lateral mandibular movement is made

lateral incisor: the second incisor

lateral interocclusal record: a registration of the positional relationship of opposing teeth or arches made in either a right or left lateral position of the mandible

lateral mandibular movement: syn, MANDIBULAR LATERAL TRANSLATION

lateral mandibular relation: the relationship of the mandible to the maxillae in a position to the left or right of the midsagittal plane

lateral movement: a movement from either right or left of the midsagittal plane (GPT-4)

lateral protrusion: syn, LATEROPROTRUSION

lateral relation: the relation of the mandible to the maxillae when the lower jaw is in a position to either side of centric relation (GPT-4)

lateral side shift: the aspect of electromagnetic radiation of which the human observer is aware through the visual sensations that arise from the stimulation of the retina of the eye

light: an object that emits light or radiant energy to which the human eye is sensitive; the emission may be described by the relative amount of energy emitted at each wavelength in the visible spectrum; the emission may be described in terms of its correlated color temperature

lightness: a chromatic dimension necessary to describe the 3D nature of color, the others being hue and saturation; the lightness dimension may also be called brightness; in the Munsell color order system, the lightness dimension is called value; 2. perception by which white objects are distinguished from gray and light objects from dark ones; equivalent to shading in grays

limbus: a border or interface especially if marked by a difference in color or structure between adjoining parts

line angle: the point of convergence of two planes in a tooth preparation or on a tooth surface

line of occlusion: the alignment of the occluding surfaces of the teeth as viewed in the horizontal plane; syn, OCCLUSAL PLANE

linear coefficient of thermal expansion: the fractional change in length of a given material per degree change in temperature

linear occlusion: the occlusal arrangement of artificial teeth, as viewed in the horizontal plane, wherein the masticatory surfaces of the mandibular posterior artificial teeth have a straight, long, narrow occlusal form resembling that of a line, usually articulating with opposing monolobe teeth

lingual: pertaining to the tongue; next to or toward the tongue

lingual apron: the midsagittal plane

lingual bar: syn, LINGUAL BAR CONNECTOR

leaf gauge: a set of blades or leaves of increasing thickness used to measure the distance between two points or to provide metered separation; orig, James Hart Long, prosthodontist, Daytona Beach, Florida, U.S.A.

lengthening of the clinical crown: a surgical procedure designed to increase the extent of supragingival tooth structure for restorative or esthetic purposes; syn, CROWN LENGTHENING

LET: acronym for linear energy transfer; the energy dissipation of ionizing radiation over a given linear distance; highly penetrating radiations such as gamma rays cause low ion concentration and thus have a relatively low LET, x-rays and beta particles exhibit intermediate LET, and alpha particles have a high LET

leucite: a potassium alumino-silicate crystal with a high thermal expansion coefficient; contributes to flexural strength in ceramics

light-cured: syn, LIGHT-CURED POLYMERIZATION

light source: an object that emits light or radiant energy to which the human eye is sensitive; the emission of a light source can be described by the relative amount of energy emitted at each wavelength in the visible spectrum; the emission may be described in terms of its correlated color temperature

lightness: a chromatic dimension necessary to describe the 3D nature of color, the others being hue and saturation; the lightness dimension may also be called brightness; in the Munsell color order system, the lightness dimension is called value; 2. perception by which white objects are distinguished from gray and light objects from dark ones; equivalent to shading in grays

limbus: a border or interface especially if marked by a difference in color or structure between adjoining parts

line angle: the point of convergence of two planes in a tooth preparation or on a tooth surface

line of occlusion: the alignment of the occluding surfaces of the teeth as viewed in the horizontal plane; syn, OCCLUSAL PLANE

linear coefficient of thermal expansion: the fractional change in length of a given material per degree change in temperature

linear occlusion: the occlusal arrangement of artificial teeth, as viewed in the horizontal plane, wherein the masticatory surfaces of the mandibular posterior artificial teeth have a straight, long, narrow occlusal form resembling that of a line, usually articulating with opposing monolobe teeth

Frush JP. Linear occlusion. Ill Dent J 1965;35:788-94

lingual: pertaining to the tongue; next to or toward the tongue

lingual apron: syn, LINGUAL PLATE

lingual bar: syn, LINGUAL BAR CONNECTOR
lingual bar connector • malleable

lingual bar connector]  ling’g’wul bár ka-něk’ tôr’š: a mandibular major connector of a removable partial denture located lingual to the dental arch

lingual blanket slang: syn, LINGUAL PLATE

lingual flange]  ling’g’wul flăn’j: the portion of the flange of a mandibular denture that occupies the alveololingual sulcus

lingual inclination]  ling’g’wul įn-kla-nă’ shun’: deviation of the coronal portion of a tooth from the vertical plane toward the tongue

lingual plate]  ling’g’wul plăt’š: the portion of the major connector of a removable partial denture contacting the lingual surfaces of the natural teeth; syn, linguoplaste

lingual rest]  ling’g’wul rĕst’š: a metallic extension of a removable partial denture framework that fits into a prepared depression within an abutment tooth’s lingual surface

lingual rest seat]  ling’g’wul rĕst set’š: the depression prepared on the lingual surface of an abutment tooth to accept the metal rest of a removable partial denture (the lingual rest)

lingual splint]  ling’g’wul splînt’š: a dental splint conforming to the inner aspect of the dental arch

lingual strap slang, obs syn, LINGUAL PLATE

lingualized occlusion]  ling’g’wul a-klō’ shun’: orig, this concept was first described by S. Howard Payne, prosthodontist, U.S.A., 1941; this form of denture occlusion articulates the maxillary lingual cusps with the mandibular occlusal surfaces in centric occlusion, working and nonworking mandibular positions; orig, the term originated from Earl Pound, prosthodontist, U.S.A.

Payne SH. A posterior set-up to meet individual requirements. Dent Digest 1941;47:20-22

Pound E. Utilizing speech to simplify a personalized denture service. J Prosthet Dent 1970;24:586-600

linguocclusion]  ling’g’wul a-klō’ shun’ m: an occlusion in which a tooth or group of teeth is located lingual to its normal position

linguoverision]  ling’g’wul văr’ zhun, -shun’ n: lingual or palatal position of a tooth beyond the normal arch form

lip line]  comp, HIGH LIP LINE, LOW LIP LINE

lip switch operation]  líp swîch ŏp’-ră’ shun’; tissues borrowed from one lip and transferred to the other; also used to describe a modified vestibuloplasty procedure; comp, ABBE FLAP, ESTLANDER’S OPERATION

lithium ceramics] a class of ceramic characterized by lithium silicate crystal nuclei in a network of silica glass

lithium disilicate] a medium-strength glass-ceramic characterized by a network of SiO2 tetrahedra surrounding primarily lithium disilicate (Li2Si2O5) crystals

loading] comp, IMMEDIATE LOADING, PROGRESSIVE LOADING

lobe] víób’ n (1525); a curved or rounded projection or division, especially of a body organ or part

local etiologic factors] ví’kal é’tē-a-lō’jĭk fāk’ tär:š: the environmental influences that may be implicated in the causation, modification, and/or perpetuation of a disease entity

localization film] ví’ka-lij’ ză’ shun’ film’š: a radiograph made with radiopaque markers to localize the position of a body (i.e., a tumor) relative to external landmarks

long axis] víng’āk sî’š: a theoretical line passing lengthwise through the center of a body

long centric articulation] nonstand: syn, INTERCUSPAL CONTACT AREA

longitudinal axis] syn, SAGITTAL AXIS

lost-wax casting technique] the casting of metal alloy or ceramics into a mold produced by surrounding (investing) an expendable (wax) pattern with a refractory slurry that sets at room temperature, after which the pattern is removed through the use of heat; comp, INVESTMENT CAST

low lip line] vío lip’ lin’: 1, the lowest position of the inferior border of the upper lip when it is at rest; 2, the lowest position of the superior border of the lower lip during smiling or voluntary retraction

lower impression] ví’o ĭm-prĕš’ an’ slang: an impression of the mandibular jaw or dental structures (GPT-4); syn, MANDIBULAR IMPRESSION

lower ridge slope] ví’o ĭr ĭ rı’ slop’ obs: 1, the slope of the mandibular residual ridge in the second and third molar region as seen from the buccal side (GPT-1); 2, the portion of the lower residual ridge, either lingual, labial, or buccal, between the crest of the ridge and the mucobuccal fold or flexion line of the peripheral tissues (GPT-1)

Lucia jig] epónym for ANTERIOR DEPROGRAMMING DEVICE; orig, Victor O. Lucia, prosthodontist, New Jersey and New York, U.S.A.

lug] ví’ag’ m: something that projects away from an object and is generally used as a support or for connection to a body

luminance] ví’oa’ ma-nans’ n (1880); the intensity of light per unit area

1 lume] ví’o ŏ (15c): a substance, such as cement or clay, used for placing a joint or coating a porous surface to make it impervious to liquid or gas; syn, CEMENT

2 lume] ví’o ŏ vt: to fasten, attach, or seal; luted] ví’o ŏd’; luting] ví’o ŏ ŧing’; syn, CEMENT

luting agent] any material used to attach or cement indirect restorations to prepared teeth

luxation] n (1552); an abnormal anterior displacement of the mandibular condyle away from the glenoid fossa that is self-reducing; traumatic displacement of a tooth away from the socket

M

macroGLOSSIA] m’àk’rō-glō’ zhə’ n: excessive size of the tongue

macula] m’àk’-yâ-la’ n (1863); a patch of tissue that is altered in color but usually not elevated; usually characteristic of various diseases

maculae] pl

magnetic flux density] abbr, T for Tesla; a measure of the strength of a magnetic field (abbr, G for Gauss) at a given distance through a permeable medium

maintenance dose] m’àn’ta-nans dōs’š: the quantity of a drug necessary to maintain a normal physiologic state or a desired blood or tissue level of drug

major connector] m’àjar ka-něk’ tôr’š: the part of a removable partial denture that joins the components on one side of the arch to those on the opposite side

malalignment] inappropriately positioned, comp, MALOCCLUSION

malleable] m’àl’-e-bal adj (14c): capable of being extended or shaped with a hammer or with the pressure of rollers
malocclusion | /məlˈaʊ.kləˈʃun/ n (1888): 1. any deviation from a physiologically acceptable contact between the opposing dental arches; 2. any deviation from a normal occlusion; comp, ANGLE’S CLASSIFICATION OF OCCLUSION

mamelon | /ˈmæmə.lən/ n: one of three tubercles sometimes found on the incisal edges of incisor teeth; mameloned | /ˈmæmə.lə.ˈnæd/ adj, mameloned | /ˈmæmə.lə.ˈnæd.ʃən/ n
mandible | /ˈmændə.bəl/ n (15c): the lower jawbone
mandibular | /ˈmændə.bəl.ər/ adj of or pertaining to the mandible
mandibular anteroposterior ridge slope | /ˈmændə.bəl.ər.ən-tərəpəˈstərɪər iːdʒ/ n: the slope of the crest of the mandibular residual ridge from the third molar region to its most anterior aspect in relation to the lower border of the mandible as viewed in profile
mandibular axis | /ˈmændə.bəl.ər.əs/ n: comp, SAGITTAL AXIS, TRANSVERSE HORIZONTAL AXIS, VERTICAL AXIS

mandibular condyle: the articual process of the mandible; syn, CONDYLE, head of the mandible
mandibular dislocation | /ˈmændə.bəl.ər.əd ˈloʊ.ˈkɔ.ʃən/ n: a non-self-reducing displacement of the mandibular condyle out of the glenoid fossa
mandibular dysplasia | /ˈmændə.bəl.ər.əd ˈdɪs.plə.ˈzə.ʃən/ n: disharmony in size or form between the right and left halves of the mandible
mandibular equilibration | /ˈmændə.bəl.ər.əd ˈiːkwə.ˈliːbɾə.ˈʃən/ n: 1. the act or acts performed to place the mandible in equilibrium; 2. a condition in which all of the forces acting on the mandible are neutralized
mandibular glide | /ˈmændə.bəl.ər.əd ˈɡlɪd/ obs: the side to side, protractive, and intermediate movement of the mandible occurring when the teeth or other occluding surfaces are in contact (GPT-4)
mandibular guide plane prosthesis | /ˈmændə.bəl.ər ˈɡiːd plə.ˈnɛs/ obs: syn, MANDIBULAR RESECTION PROSTHESIS
mandibular hinge position | /ˈmændə.bəl.ər ˈhɪndʒ ˈpɑ.ˈzɪʃ.ən/ obs: the position of the mandible in relation to the maxillae at which opening and closing movements can be made on the hinge axis (GPT-4)
mandibular impression | /ˈmændə.bəl.ər ɪmˈprɛʃ.ən/ n: an impression of the mandibular jaw or dental structures
mandibular lateral translation: syn, MANDIBULAR TRANSLATION
mandibular micrognathia | /ˈmændə.bəl.ər ˌmɪkˈroʊ.ˈnæθ.ə/ n: an abnormally small mandible with associated reccession of the chin
mandibular movement | /ˈmændə.bəl.ər ˈmʌʊv.ˈmɛnt/ n: any movement of the lower jaw
mandibular nerve | /ˈmændə.bəl.ər ˈnɜrv/ n: the third division of the trigeminal nerve that leaves the skull through the foramen ovale and provides motor innervation to the muscles of mastication, to the tensor veli palatini muscle, the tensor tympani muscle, the anterior belly of the digastric muscle, and the mylohyoid muscle; it also provides the general sensory innervation to the mandibular teeth and gingivae, the floor of the mouth, the epithelium of the anterior two-thirds of the tongue, and the skin of the lower portion of the face
mandibular orthopedic repositioning device | /ˈmændə.bəl.ər ˈɔrθəˌpɛd.ək ˈrɪ.pə.ˈsɛ.ʃən dɪˈvɪz/ n: a removable device that creates a different, yet temporary, dental occlusal position that guides the mandible to close into a predetermined and altered position
mandibular plane | /ˈmændə.bəl.ər ˈplэɪn/ n: in cephalometrics, a plane that passes through the inferior border of the mandible
mandibular protraction | /ˈmændə.bəl.ər prə.ˈtræk.ʃən/ n: a type of facial anomaly in which the gnathion lies anterior to the orbital plane; comp, ANGLE’S CLASSIFICATION OF OCCLUSION

mandibular relationship record | /ˈmændə.bəl.ər ˈrɪشن.ˈrɛk.ərd/ n: any registration of the relationship of the mandible to the maxillae

mandibular repositioning | /ˈmændə.bəl.ər ˈrɪpə.ˈzɛʃ.ən/ n: guidance of the mandible to cause closure in a predetermined, altered position
mandibular resection | /ˈmændə.bəl.ər ˈrɛk.ʃən/ n: the surgical removal of a portion or all of the mandible and the related soft tissues; syn, MANDIBULECTOMY

mandibular resection prosthesis | /ˈmændə.bəl.ər ˈrɛk.ʃən ˈprɒθ.əsɪs/ n: a maxillofacial prosthesis used to maintain a functional position for the jaws (maxillae and mandible), improve speech and deglutition following trauma and/or surgery to the mandible and/or adjacent structures; syn, MANDIBULAR GUIDE PLANE PROSTHESIS, MANDIBULAR RESECTION PROSTHESIS WITH GUIDE, MANDIBULAR RESECTION PROSTHESIS WITHOUT GUIDE, RESECTION PROSTHESIS

mandibular rest position: syn, PHYSIOLOGIC REST POSITION, VERTICAL DIMENSION OF REST

mandibular retraction | /ˈmændə.bəl.ər ˈrɛtrə.ˈkʃən/ n: a type of facial anomaly in which gnathion lies posterior to the orbital plane; comp, ANGLE’S CLASSIFICATION OF OCCLUSION

mandibular side-shift | /ˈmændə.bəl.ər ˈsaɪd.ʃif/ n: a transosseal dental implant placed from the inferior border of the mandible with posts (abutments) that extend through the mucosa into the oral cavity in the mandibular anterior region; syn, transmandibular implant, TRANSOSTEAL DENTAL IMPLANT

mandibular tracing | /ˈmændə.bəl.ər ˈtræ.kɪŋ/ a: a graphic representation or record of the movements of the mandible within a given plane; Editorial note for usage: extraoral tracer (ing), intraoral tracer (ing), and tracing device are the primary terms; comp, ARROW POINT TRACER, CENTRAL BEARING TRACING DEVICE, CEPHALOMETRIC TRACER, COBLE BALANCER, EXTRAORAL TRACER, GOTHIC ARC TRACER, INTRAORAL TRACING, NEEDLE POINT TRACING, PANTOGRAPHIC TRACING, STYLIST TRACING, TRACING DEVICE

mandibular translation | /ˈmændə.bəl.ər ˈtræn̩.sɪ.ʃən/ n: the translatory (medio-lateral) movement of the mandible when viewed in the frontal plane; while this has not been demonstrated to occur as an immediate horizontal movement when viewed in the frontal plane, it could theoretically occur in an essentially pure translatory form in the early part of the motion or in combination with rotation in the latter part of the motion or both; comp, EARLY MANDIBULAR LATERAL TRANSLATION, IMMEDIATE MANDIBULAR LATERAL TRANSLATION, PROGRESSIVE MANDIBULAR LATERAL TRANSLATION

mandibular trismus | /ˈmændə.bəl.ər ˈtrɪzməs/ n: reduced mobility of the mandible resulting from tonic contracture of the elevator muscles of the mandible

mandibulectomy | /ˈmændə.bəl.əuˌlɛk.tə.ˈmeɪ/ n: the removal of part or the entire mandible

mandrel | /ˈmændrəl/ n (1790): 1. usually a tapered or cylindrical axle, spindle, or arbor placed in a hole to support it during machining; 2. a metal bar that serves as a core about which material may be cast, molded, compressed, forged, bent, or shaped; 3. the shaft and bearings on which a tool is mounted

margin | /ˈmɑːr.ʒən/ n (14c): the outer edge of a crown, inlay, onlay, or other restoration; a boundary surface of a tooth preparation is termed the finish line or finish curve; comp, FINISH LINE

marginal gingiva | /ˈmɑːr.ʒəl ˈdʒɪn.ɡɪvə/ n: the most coronal portion of the gingiva; often used to refer to the free gingiva that forms the wall of the gingival crevice in health
marginal ridge 

\[ \text{mār'-jā-nal} \] 

a component of the tooth structure forming the occlusal proximal margin of a premolar or molar and lingual proximal margin of anterior teeth

Maryland bridge 

\[ \text{mā-rədən-dər} \times \text{syn.} \] 

RESIN-BONDED PROSTHESIS

máking 

\[ \text{mās'king} \] 

n: the process of applying an opaque covering to camouflage the metal component of a prosthesis

master cast: 

\[ \text{mās'tər} \times \text{DEFINITIVE CAST} \]

master impression 

\[ \text{mās'tər ĭm-prēsh'an} \] 

the negative likeness made for the purpose of fabricating a prosthesis

masticating cycles 

\[ \text{mās'-tā-kā'ing} \times \text{obs.: the patterns of mandibular movements formed during the chewing of food (GPT-1)} \]

mastication 

\[ \text{mās'-tā-kā'shan} \times \text{(1649): the process of chewing food for swallowing and digestion} \]

masticatory apparatus: 

\[ \text{mās-tā-kā'ra-tōr} \times \text{MASTICATORY SYSTEM} \]

masticatory cycle 

\[ \text{mās'-tā-kā'ra-tōr'-ē} 	imes \text{3-D representation of mandibular movement produced during the chewing of food} \]

masticatory efficiency 

\[ \text{mās'-tā-kā'ra-tōr'-ē} 	imes \text{effort required to achieve a standard degree of comminution of food} \]

masticatory force 

\[ \text{mās'-tā-kā'ra-tōr'-fōrs} 	imes \text{force applied by the muscles of mastication during chewing} \]

masticatory movements 

\[ \text{mās'-tā-kā'ra-tōr'-mōv'mentz} \times \text{mandibular movements used for chewing food; syn. MASTICATORY CYCLE} \]

masticatory mucosa: 

\[ \text{mās'-tā-kā'ra-tōr'-mūs'-ōk'shəs} \times \text{firmly attached, keratinized oral mucosa with a lamina propria that is fused to the underlying periosteum; comp. MUCOSA} \]

masticatory muscle 

\[ \text{mās'-tā-kā'ra-tōr'-mūs'-əl} \times \text{any of the muscles that elevate the mandible to close the mouth (temporalis muscle, superficial and deep masseter muscles, medial pterygoid muscles); syn. ELEVATOR MUSCLE, MUSCLE OF MASTICATION} \]

masticatory pain 

\[ \text{mās'-tā-kā'ra-tōr'-pān'fūs'-əb} \times \text{discomfort about the face and mouth induced by chewing or other use of the jaws but independent of local disease involving the teeth and mouth} \]

masticatory performance 

\[ \text{mās'-tā-kā'ra-tōr'-pər-fōr-məns} \times \text{a measure of the comminution of food attainable under standardized testing conditions} \]

masticatory system 

\[ \text{mās'-tā-kā'ra-tōr'-sēm'ən-təz} \times \text{the organs and structures primarily functioning in mastication; these include the teeth with their supporting structures, craniofacial articulations, mandible, positioning and accessory musculature, tongue, lips, cheeks, oral mucosa, and the associated neurologic complex} \]

matrix 

\[ \text{māt'siks} \times \text{n (15c): 1. a mold or impression in which something is formed; 2. the portion of an attachment system that receives the patra; matrices} \times \text{māt'si-sēz} \times \text{pl.} \]

maxilla 

\[ \text{māk'sə-sil'-ə} \times \text{n (15c): the irregularly shaped bone that, with its contralateral maxilla, forms the upper jaw; it assists in the formation of the orbit, the nasal cavity, and the hard palate; it contains the maxillary teeth; maxillae} \times \text{māk'sə-sil'-ə} \times \text{pl.} \]

maxillary impression 

\[ \text{māk'-sə-lār'-e̱'z} \times \text{an impression of the maxillary jaw or dental structures} \]

maxillary micrognathia 

\[ \text{māk'-sə-lār'-e̱'z mi-kro-nā-thē'ə} \times \text{abnormally small maxillae with associated retraction of the middle third of the face} \]

maxillary protraction 

\[ \text{māk'-sə-lār'-e̱'z prō-trāk'shən} \times \text{a type of facial anomaly in which subnasal lies anterior to the orbital plane} \]

maxillary resection 

\[ \text{māk'-sə-lār'-e̱'z rē-sēk'shən} \times \text{the surgical removal of a part or all of the maxillae; syn. MAXILLECTOMY} \]

maxillary sinus 

\[ \text{māk'-sə-lār'-e̱'z si-nəs} \times \text{the anatomic space located superior to the posterior maxillary alveolus} \]

maxillary tuberosity 

\[ \text{māk'-sə-lār'-e̱'z tōô-ba-roś'tē-tē's} \times \text{the most distal portion of the maxillary alveolar ridge} \]

maxillectomy 

\[ \text{māk'-sə-lēk'tə-mē} \times \text{n: the removal of part or all of the maxillae; syn. MAXILLABYREXCTION} \]

maxillofacial 

\[ \text{māk'-sə-lā-fək'shəl} \times \text{adj: pertaining to the dental arches, the face, head, and neck structures} \]

maxillofacial prosthesis 

\[ \text{māk'-sə-lā-fək'shəz prōs-thēs'ēz} \times \text{any prosthesis used to replace part or all of any stomatognathic and/or craniofacial structures. Editorial note for usage: the taxonomy for maxillofacial prostheses may include modifiers (adjectives) to provide descriptive evidence of the nature of the prosthesis including ANATOMIC LOCATION, Retention, Support, Time, Materials, and Form; frequently, the means of retention is used, and may encompass descriptive adjectives, such as the adjacent tissue, teeth, dental/craniofacial implants, or a combination of such, thus appropriate terminology can include TISSUE-RETAINED MP, TOOTH-RETAINED MP, IMPLANT-RETAINED MP, TISSUE/IMPLANT-RETAINED MP; descriptive terminology may also be included to delineate time utilization for the prosthesis, such as surgical, interim, and definitive.} \]

maxillofacial prosthetic adhesive 

\[ \text{māk'-sə-lā-fək'shəz prōs-thē'tēs'āk'-dē-hē'siv} \times \text{a material used to adhere external maxillofacial prostheses to skin and associated structures around the periphery of an external anatomic defect} \]

maxillofacial prosthetics 

\[ \text{māk'-sə-lā-fək'shəz prōs-thē'tēz'ək'shəz} \times \text{the branch of prosthodontics concerned with the restoration and/or replacement of stomatognathic and craniofacial structures with prostheses that may or may not be removed on a regular or elective basis} \]

maxillocranial dysplasia 

\[ \text{māk'-sə-lā-mən-dē'z hā-lə-dīs-pəl'-zha-hē'-ə} \times \text{disharmony between the maxillae and the mandible} \]

maxillocranial fixation: 

\[ \times \text{fastening together of the maxillary and mandibular teeth, as for immobilization of a mandibular fracture; syn. INTERMAXILLARY FIXATION} \]

maxillocranial record: 

\[ \text{māk'-sə-lā-mən-dē'z rēk-kərs'shən} \times \text{a registration of any positional relationship of the mandible relative to the maxillae; these records may be made at any vertical, horizontal, or lateral orientation; syn. JAW RELATION RECORD} \]

maximal intercuspal contacts 

\[ \text{māk'-sə-sal in ter'-kūs'-pəl' kōn'tēks'tés} \times \text{tooth contact in the maximal intercuspal position} \]

maximal intercuspal position 

\[ \text{māk'-sə-sal in ter'-kūs'-pəl' pā'zīsh'an} \times \text{acronym is MIP; the complete intercuspation of the opposing teeth independent of condylar position, sometimes referred to as the best fit of the teeth regardless of the condylar position; comp. CENTRIC OCCLUSION} \]

mean foundation plane 

\[ \text{mēn fon'-də-shən plān'} \times \text{obs: the mean of the various irregularities in form and inclination of the basal seat (GPT-4)} \]
meatus \mē-əˈtus\ n (1665): a natural body passage; a general term for any opening or passageway in the body; *meatuses* or *meati* pl

mechanical anterior guidance table: an adjustable articulator component that guides the movement of the incisal pin of the articulator to simulate lateral and anterior guidance during mandibular movement; *comp, CUSTOM ANTERIOR GUIDE TABLE, ANTERIOR GUIDE TABLE*

mechanically balanced occlusion \mī-kan-ˈtā-lē bālˈand a-ˈklooˈshun\ obs: a balanced occlusion without reference to physiologic considerations, as on an articulator (GPT-4)

median mandibular point \mēˈdē-ənˈplōnt\ a point on the anteroposterior center of the mandibular ridge in the median sagittal plane (GPT-4)

median plane \mēˈde-ənˈplān\ an imaginary plane passing longitudinally through the body, from front to back, and dividing it into left and right halves

mediolateral curve \mēˈde-ə-ˈlātər-əl kūr\ in the mandibular arch, that curve (viewed in the frontal plane), which is concave and contacts the buccal and lingual cusps tips of the mandibular molars; in the maxillary arch, that curve (viewed in the frontal plane), which is convex and contacts the buccal and lingual cusp tips of the maxillary molars.

mediotrusive occlusal contact: *syn, nonworking-side movement*

mediotrusive occlusal contact: *syn, NONWORKING-SIDE OCCLUSAL CONTACT*

membrane \mēˈmbrən\ n (15c): 1. a thin soft pliable sheet or layer, especially of plant or animal origin; 2. a thin layer of tissue that lines a cavity, envelops a vessel or part, or separates a space or organ; 3. a barrier used in guided tissue and bone regeneration surgical procedures

meniscectomy: excision of the intra-articular disc; *syn, DISCECTOMY*

meniscus \mənˈsɪs\ n; *menisci* \mənˈsɪs\ pl; *syn, DISC*

mesial \mēˈzi-əl adj (1803): near or toward the centerline of the dental arch; toward the median sagittal plane of the face, following the curvature of the dental arch

mesial drift \mēˈzi-əl dɹɪft\ movement of teeth toward the midline

mesio-occlusion \mēˈzi-ə-ˈskələns\ any occlusion in which the mandibular teeth articulate with the maxillary teeth in a position anterior to neuromuscular occlusion; *comp, ANGLE’S CLASSIFICATION OF OCCLUSION*

mesioversion \mēˈzi-ər-ˈvərn\ -shun\: with reference to a tooth, nearer than normal in its position toward the median line of the face

metal \mēˈtəl n (13c): 1. any strong and relatively ductile substance that provides electropositive ions to a corrosive environment and that can be polished to a high luster; characterized by metallic atomic bonding

metal base \mēˈtəl bās\: the metallic portion of a denture base forming a part or the entire basal surface of the denture; it serves as a base for the attachment of the resin portion of the denture base and the teeth

metal-ceramic restoration \mēˈtəl kərˈmərək rēs-ˈtə-rāˈshun\: artificial crown or fixed complete or partial denture that uses a metal substructure and porcelain veneer; *syn, PORCELAIN-FUSED-TO-METAL RESTORATION*

metal collar: a narrow band of highly polished metal immediately adjacent to the margin on a metal-ceramic restoration; *comp, PORCELAIN MARGIN*

metal insert teeth \mēˈtəl ɪnˈsərt tēθ\: denture teeth containing metal cutting edges; teeth designed to contain metal cutting edges in the occlusal surface; *comp, Hardy cutters, Sosin blades*

metal saddle \mēˈtəl sāl\ obs, slang: a metal denture base (GPT-4)

metamer \mēˈtəmər\ n; one of a pair of objects whose colors match when viewed under particular viewing conditions, but do not match under all viewing conditions

metameric pair \mēˈtəmərˈik pār\: a pair of objects whose colors match when viewed under particular viewing conditions, but do not match if the viewing conditions are changed; thus a metameric pair of samples exhibit the same tristimulus values for a described set of viewing conditions (observer, light source, geometry of the illumination, and viewing arrangement) but have different spectral distributions; hence, they exhibit a match that is conditional

metamerism \mēˈtəmərˈizəm\ n (1877): pairs of objects that have different spectral curves but appear to match when viewed in a given hue; metamerism should not be confused with the terms *flair* or *color constancy*, which applies to apparent color change exhibited by a single color when the spectral distribution of the light source is changed or when the angle of illumination or viewing is changed

methyl methacrylate resin \mēˈθiəl məθəkˈrā-lit \rəˈseen\: a transparent, thermoplastic acrylic resin that is used in dentistry by mixing liquid methyl methacrylate monomer with the polymer powder; the resultant mixture forms a pliable plastic mass termed *dough*, which is packed into a mold prior to initiation of polymerization

micro-computed tomography: *abbr, micro-CT*: a radiological technique at ranges of 40 to 50 microns

microcrack \mīˈkrō-krāk\ n: in porcelain, one of the numerous surface flaws that contribute to stress concentrations and result in material strengths below those theoretically possible; *syn, GRIFFITH FLAWS*

microglossia \mīˈkrō-glōsˈēə\ n: presence of a small tongue

micrognathia \mīˈkrō-nə-thēˈe-ə\ n: a congenital or acquired condition characterized by an abnormally small jaw; *syn, MANDIBULAR MICROGNATHIA, MAXILLARY MICROGNATHIA*

micromaxillae n: syn, MAXILLARY MICROGNATHIA

microstomia \mīˈkrō-stōmˈe-ə\ n: an abnormally small oral orifice

microtia \mīˈkrō-tēə\ n: a developmental anomaly characterized by hypoplasia or aplasia of the pinna of the ear, associated with an impotent or absent external auditory meatus

mid-opening click \mīd-ə-paˌning klik\: the abnormal sound emanating from the temporomandibular joint that occurs during mid protrusive translation of the condyles

midfacial deficiency \mīd-fāˈshul dī-ˈfīsh an-sēə\: failure of the mid-third of the face, including the maxillae, to grow in proportion to the upper and lower thirds

midfacial fracture \mīd-fāˈshul frāˈkərˈtrekt\: fractures of the zygomatic, maxillary, nasal, and associated bones

MIE theory: the theory that relates the scattering of a single spherical particle in a medium to the diameter of the particle, the difference in refractive index between the particle and the medium, and the wavelength of radiant energy in the medium that is incident on the particle; this theory relates to the direct observation of the scattering of a single particle as compared with the Kubelka-Munk theory and also takes into account the absorption that the particle may also exhibit

THE JOURNAL OF PROSTHETIC DENTISTRY
**MIE theory • mounting plate**

1. **mill**: n; a machine or device used for working or forming materials into a desired form, to blend materials, or to perform other mechanical operations

2. **mill**: vt (1570): 1. to subject to an operation or process in a mill; to grind; 2. to shape or dress by means of instruments; comp, MILLING

**mill** in **mill** in vb: 1. the procedure of refining occluding surfaces through the use of abrasive materials; 2. the machining of boxes or other forms in cast restorations to be used as retainers for fixed or removable prostheses

**milled ceramics**: n; a desired form made by subtractive CAM of a homogeneous ceramic block

**milled in curve**: obs; syn, MILLED IN PATH

**milled in path**: n; a contour pattern carved into the occlusal surface of an occlusion rim during various mandibular movements by teeth or studs placed in the opposing arch

**milling** in **milling** in vb: the machining of proximal boxes, recesses, or other forms on cast restorations to be used as retainers for fixed or removable prostheses

**milling in milling in**: the procedure of refining or perfecting the occlusion of teeth by the use of abrasives between their occluding surfaces while the dentures are rubbed together in the mouth or on the articulator (GPT-3); syn, MILL IN

**mini implant**: a dental implant that is fabricated with a reduced diameter (less than 3.0 mm) and shorter in length with the same modulus of elasticity; the coefficient found by dividing the unit stress, at any point up to the proportional limit, by its corresponding unit of elongation (tension) or strain; a ratio of stress to strain; as the modulus of elasticity rises, the material becomes more rigid

**modulus of elasticity**: módj’a-las üv l-lá-stis’t-te, ē-lá-lé in metallurgy, the coefficient found by dividing the unit stress, at any point up to the proportional limit, by its corresponding unit of elongation (tension) or strain; a ratio of stress to strain; as the modulus of elasticity rises, the material becomes more rigid

**modulus of resilience**: módj’a-las üv r-zíl-yans’ the work or energy required to stress a cubic inch of material (in one direction only) from zero up to the proportional limit of the material, measured by the ability of the material to withstand the momentary effect of an impact load while stresses remain within the proportional limit

**molar**: n; a posterior tooth adapted for grinding and having a somewhat quadrilateral-shaped crown with four or five cusps

**monochromatic vision**: un’a-kro-mách-tísh vîsh’ an’ visión in which there is no color discrimination

**monolithic**: adj; an object with the same chemical and physical properties throughout its thickness

**monomer**: n; a chemical compound that can undergo polymerization; any molecule that can be bound to a similar molecule to form a polymer

**monoplane**: món’a-plán, adj; an arrangement of denture teeth in a single plane that is medio-laterally and antero-posteriorly flat

**monoplane articulation**: món’a-plán ar-tik’ya-lá shun’; the arrangement of teeth by which they are positioned in a flat plane

**monoplane occlusion**: món’a-plán a-kloó’shun; an occlusal arrangement wherein the posterior teeth have masticatory surfaces that lack any cuspal height

Monson curve: syn, CURVE OF MONSON

**MORA device**: acronym for mandibular orthopedic repositioning appliance; a type of removable device with a modification to the occlusal surfaces used with the goal of repositioning the mandible to improve neuromuscular balance and jaw relationship; syn, MANDIBULAR ORTHOPEDIC REPOSITIONING DEVICE

**moulage**: múľa-zásh’n (1902): 1. the negative impression of a body structure; 2. an impression or cast made for use, especially as evidence in a criminal investigation; 3. impression of an anatomic part that produces a gypsum cast or a positive replica

**mould**: mód’l, n (13c): 1. a cavity in which a substance is shaped, as a matrix for casting metal or plastics; a negative form in which an object is cast or shaped; 2. the size and shape of an artificial tooth or teeth; syn, mold

**mould chart**: mód’l chart, an illustration of the manufacturer’s shapes and sizes of denture teeth; syn, mold chart

**mould guide**: mód’l gid, a selection of denture teeth demonstrating the moulds offered by a manufacturer; syn, mould guide

1. **mounting**: moun’ting, vt; the laboratory procedure of attaching a cast to an articulator or cast relater

2. **mounting**: moun’ting, n; the relationship of dental casts to each other and the instrument to which they are attached; comp, SPLIT-CAST MOUNTING

**mounting plate**: moun’ting plát, a removable metal or resin device that attaches to the superior and inferior members of an articulator, and is used to attach casts to the articulator

**modified cast**: syn, ALTERED CAST

**modified ridge lap**: mód’d’a-fi’ar, n; a ridge lap surface of a pontic that is adapted only to the facial aspect of the residual ridge

**modifier**: mód’r-a-fi’ar, n; a substance that alters or changes the color or properties of a substance
mounting ring: syn, MOUNTING PLATE
mouth guard: mouth guard, a removable occlusal device that is useful in reducing mouth injuries and protecting the teeth and surrounding structures from injury; syn, OCCLUSAL DEVICE
mouth rehabilitation: mouth ra-ha-bi-lí-tá-shun; obs: restoration of the form and function of the masticatory apparatus to as near normal as possible (GPT-4); comp; COMPLETE MOUTH REHABILITATION
mouth stick: mouth stík; a device held in the mouth by a disabled person that aids in performing certain functions
MRI: acronym for MAGNETIC RESONANCE IMAGING; syn, NUCLEAR MAGNETIC RESONANCE
mucobucal fold: myyó-kó-bú-k’al fóld; the line of flexure of the mucous membrane as it passes to the cheek
mucogingival: adj pertaining to intraoral specialized soft tissue, the alveolar mucosa and gingiva
mucogingival junction: myyó-kó-jín ja-val, jín’jí-; the junction of gingiva and alveolar mucosa
mucolabial fold: myyó-kó-lá-bé-al; the line of flexure of the oral mucous membrane as it passes from the maxillary or mandibular alveolar process or residual alveolar ridge to the lip
mucoperiosteum: myyó-kó-pér’è-os’è-te’am; n: a term synonymous with a full-thickness flap implying the inclusion of both mucosa and periosteum during flap elevation
mucosa: myyóo-kó’sà’; n (1880): a mucous membrane comprised of epithelium, basement membrane, and lamina propria; syn, ALVEOLAR MUCOSA, ORAL MUCOSA
mucosal implant: nonstand; syn, MUCOSAL INSERT
mucosal insert: myyóo-kó’-sà’al in-sért; any metal form attached to the intaglio of a removable dental prosthesis that mechanically engages undercuts in a surgically prepared mucosal site; Editorial note for usage: mucosal inserts are not indwelling and are not considered dental implants; comp, button implant, intramucosal insert, MUCOSAL IMPLANT
mucositis: myyóo-kó-sí-tí’s; n: inflammation of the mucous membrane
mucostatic: myyóo-kó-stá-tí’k; adj: the state of the oral mucosa when not displaced by external forces
muffle: múf’al; n: the portion of a furnace, usually removable or replaceable, in which material may be placed for processing without direct exposure to a heating element
Munsell chroma: eponym for the Munsell color system chroma, which is quality by which a strong color is distinguished from one that is weak; the intensity of a distinctive hue color intensity; orig, Alfred H. Munsell, artist/teacher, Massachusetts, U.S.A., 1858-1918; syn, SATURATION
Munsell color order system: eponym for a color order system, developed in 1905, which places colors in an orderly arrangement encompassing the three attributes of hue, value, and chroma; orig, Alfred H. Munsell, artist/teacher, Massachusetts, U.S.A., 1858-1918
Munsell hue: eponym for that quality by which one color family is distinguished from another, as red from yellow, and green from blue or purple; the dimension of color determined by wavelength; orig, Alfred H. Munsell, artist/teacher, Massachusetts, U.S.A., 1858-1918
Munsell value: eponym for the relative brightness of a color; the quality of grayness in comparison to white (high value) and black (low value); in the Munsell color system; the value of a color is determined by which gray on the value scale it matches in lightness/darkness (black is assigned a value of zero; white a value of 10); orig, Alfred H. Munsell, artist/teacher, Massachusetts, U.S.A., 1858-1918
muscle: mú’sà’; n (14c): an organ that by contraction produces movements of an animal; a tissue composed of contractile cells or fibers that effect movement of an organ or part of the body
muscle contraction: mú’s àl kan-trák’shun; the shortening and development of tension in a muscle in response to stimulation; isometric muscle contraction relates to tension in the muscle without changing the length
muscle contracture: mú’s àl kan-trák’chur; a condition of high resistance to passive stretching of a muscle resulting from fibrosis of the tissues supporting the muscle or the joint; sustained increased resistance to passive stretch with reduced muscle length
muscle hypertension: mú’s àl hi’par-téns’né; obs: increased muscular tension that is not easily released but that does not prevent normal lengthening of the muscles involved (GPT-4)
muscle hypertonicity: increased contractile activity in some motor units driven by reflex arcs from receptors in the muscle and/or alpha motor neurons of the spinal cord
muscle marking: slang; syn, BORDER MOLDING
muscle relaxant: mú’s àl rí-lák’sánt; a drug or therapy that diminishes muscle tension
muscle spasm: mú’s àl spáz’ám; a sudden involuntary contraction of a muscle or group of muscles attended by pain and interference with function; it differs from muscle splinting in that the contraction is sustained even when the muscle is at rest and the pain/dysfunction is present with passive and active movements of the affected part; syn, MYOSPASM
muscle spasticity: mú’s àl spá-zí-ték’s; increased muscular tension of antagonists preventing normal movement and caused by an inability to relax (a loss of reciprocal inhibition)
muscle splinting: mú’s àl splínt’ing; involuntary contraction (rigidity) of muscles occurring as a means of avoiding the pain caused by movement of the part (resistance to passive stretch); the involved muscle(s) relaxes at rest; syn, protective muscle co-contraction
muscle trimming: slang; syn, BORDER MOLDING
muscular atrophy: mú’s kya’lar á’trá-fé; a wasting of muscular tissue resulting from the lack of use
musculoskeletal pain: mú’s kya-ló-skel’à-ték’pán; deep, somatic pain that originates in skeletal muscles, facial sheaths, and tendons (myogenous pain), bone and periosteum (osseous pain), joint, joint capsules, and ligaments (arthragic pain), and in soft connective tissues
mutually protected articulation: myyóo’choó-al-al pra-ték’ kid ár’ti’k ya-la shun; an occlusal scheme in which the posterior teeth prevent excessive contact of the anterior teeth in maximal intercuspal position, and the anterior teeth disengage the posterior teeth in all mandibular excursive movements.
mutually protected occlusion: syn, MUTUALLY PROTECTED ARTICULATION
myalgia: muy’ál’jé-a’; n (1860): pain in a muscle or muscles
mycotic: mú’kö’tik; pertaining to a mycosis; caused by fungi
mylohyoid fossa: mú-lo’hyíd fós’a; the concavity in the mandible inferior to the mylohyoid line in the molar region
myocontracture resulting from reduced muscle stimulation

myostatic contracture

myocentric

Jankelson B, Sparks S. Crane PF, Radke JC. Neural conduction of the introduced in 1969 by Bernard Jankelson, DDS as a means of stimulation of the stomatognathic system; an electrical device Seattle: Myotronics Research; 1984:52

Jankelson BR, Polley ML. Electromyography in clinical dentistry.

which, with the mandible in the rest position, subsequent clonic attachment of the mylohyoid muscle (GPT-4)

THE JOURNAL OF PROSTHETIC DENTISTRY

mylohyoid groove or canal • needle point tracing

mylohyoid groove or canal \mɪˈla-hoid groʊv ɔr ka-nəl\: the groove in the mandible running downward and forward toward the submandibular fossa, which contains the mylohyoid muscle, nerve, and vessels

mylohyoid region \mɪˈla-hoid reˈjan\: obstr the region on the lingual surface of the mandible marked by the mylohyoid ridge and the attachment of the mylohyoid muscle (GPT-4)

mylohyoid ridge \mɪˈla-hoid riːd\: an oblique ridge on the lingual surface of the mandible that extends from the level of the roots of the last molar teeth and that serves as a bony attachment for the mylohyoid muscles forming the floor of the mouth

myo-monitor \mɪˈo-ˈmɔn-ə tɛr\: a digital electronic pulse generator specifically optimized for bilateral transcutaneous electrical neural stimulation of the stomatognathic system; an electrical device introduced in 1969 by Bernard Jankelson, DDS as a means of applying muscle relaxation as a prerequisite to obtain an occlusal position that would sustain a relaxed musculature

myocentric \mɪˈoʊ sɛnˈtrɪk\, adj: that terminal point in space in which, with the mandible in the rest position, subsequent clonic muscle contraction will raise the mandible through the interocclusal space along the myocentric (muscle balanced) trajectory; also described as the initial occlusal contact along the myocentric trajectory (isotonic closure of the mandible from rest position)

Jankelson BR, Polley ML. Electromyography in clinical dentistry. Seattle: Myotronics Research; 1984:52

myofascial trigger point \mɪˈa-fəʃəl tɹɪɡ̯ər pɔɪnt\: a hyperirritable, table usually within a skeletal muscle or in the muscle fascia that is painful on compression and can give rise to characteristic referred pain, tenderness (secondary hyperalgesia), and autonomic phenomena

myofibrotic capsular contracture \mɪˈa-fi-braˈtɪk kæpˈsa-lər kæn-trakˈʃʊr\: muscle contraction resulting from the formation of excessive fibrous tissue within the muscle or its sheath

myofunctional \mɪˈa-fəŋˈɡkʃə-nəl\: relating to the function of muscles; in dentistry, the role of muscle function in the cause or correction of muscle related problems

myofunctional therapy \mɪˈa-fəŋˈɡkʃə-nəl θɛərˈə-pɛt\: the use of exercises to improve the action of a group of muscles used as an adjunct to orthodontic or craniofacial dysfunction treatment

myogenous pain \mɪˈa-jənˈjʊs\: deep somatic musculoskeletal pain originating in skeletal muscles, fascial sheaths, or tendons

myositis \mɪˈa-sɪtəs\ n (ca. 1819): inflammation of muscle tissue

myospasm n syn, MUSCLE SPASM

myostatic contracture \mɪˈa-staˈtɪk kan-trakˈʃʊr\: muscle contraction resulting from reduced muscle stimulation

myotonia \mɪˈa-təˈnɔ neə\ n (1896): increased muscular irritability and contractility with decreased power of relaxation; tonic muscle spasms

N

NA: acronym for NAson; a cephalometric landmark located where the intranasal and nasofrontal sutures meet

NAM: acronym for NASOALVEOLAR MOLDING

nanometer \nəˈnæ-mətər\ n (1963): unit of length used to measure the wavelength of light. It is equivalent to 1 \times 10^{-9} \text{ m} or 10 angstroms; 1 nm = 1/1,000,000 mm

narrative report \nəˈrɑ-tɪv\: a complete description of the clinical findings, diagnosis, and treatment rendered for a given patient

nasal grimace \nəˈzɔl grɪmˈəs\, grɪ-məs\: movements in the tissue of the nares reflecting the attempts of the oronasal system to compensate for palatopharyngeal insufficiency

nasal prosthesis \nəˈzɔl prɔsˈθɛsɪs\: a removable maxillofacial prosthesis that artificially restores the nose, partially or in its entirety; nonstand/syn, artificial nose

nasal septal prosthesis \nəˈzɔl sɛpˈtɔl prɔsˈθɛsɪs\: a maxillofacial prosthesis used to occlude (obturare) a hole within the nasal septal wall; nonstand/syn, septal button, septal plug

nasal spine \nəˈzɔl spɛn\: a sharp bony protuberance of the lower margin of the anterior aperture of the nares formed by the forward prolongation of the two maxillae

nasal stent \nəˈzɔl sɛnt\: a removable intranasal maxillofacial prosthesis used to support the form of the nose

nasal turbulence \nəˈzɔl tʊrˈbə-lʌnʦ\: the excessive “noise” or air passing over resistance in the nasal passages

nasality \nəˈzɔl-tɛt\ n (1656): the quality of speech sounds when the nasal cavity is used as a resonator

nasion \nəˈzɔhən\ n: a bony cephalometric landmark at which the nasofrontal suture is bisected by the midsagittal plane

nasion relator: an adjustable average value facebow component that engages the outer point of intersection between the nasion-sella line and the soft tissue profile to stabilize the facebow while recording the position of the maxillary teeth

nasoalveolar molding: acronym is NAM; a medically prescribed device with the objective of molding the maxilla at the oronasal cavity defect, thus enhancing sucking and swallowing; approximating lip and the right and left maxillary segments of infants with cleft palates in their proper orientation until surgery is performed to repair the cleft; Editorial note for usage: this could be considered a device and a prosthesis because it also replaces anatomy; comp, presurgical infant orthopedic (PSIO) device, presurgical nasoalveolar molding (PNAM) device; orig, C. K. McNeil, U.S.A., 1950

nasopharynx \nəˈzoʊ-fərˈɪŋks\ n (1877): the part of the pharynx situated above the soft palate

natural color system \nəˈnærəl kɔr ər ˈsɪl tɛm\ (1976): a color order system that defines six color perceptions by using the concept of percentage for localizing nuances within the three-part system; the six perceptions are white, black, red, green, yellow, and blue; orig, Anders Hard et al., Sweden

natural dentition \nəˈnɛrtʃərəl dəntənʃən\: the natural teeth, as considered collectively, in the dental arch, which may be deciduous, permanent, or mixed

natural glaze \nəˈnɛrtʃərəl glæz\: the production of a glazed surface by the vitrification of the material itself and without addition of other fluxes or glasses

neck of the condylar process \nɛnɛk əv θə kɔnˈdɪlər pɹɛsə\: the constricted inferior portion of the mandibular condylar process that is continuous with the ramus of the mandible; that portion of the condylar process that connects the mandibular ramus to the condyle

eccrosis \nɛksˈrɔsɪs\, nɛˈsɪs\ n (1665): localized death of living tissue; necroses \nɪˈkrɔsɪz\ pl

needle point tracing: Editorial note for usage: extraoral tracer (ing), intraoral tracer (ing), and tracing device are the primary terms; comp, ARROW POINT TRACER, CENTRAL BEARING TRACING DEVICE, CEPHALOMETRIC TRACER, COBLE BALANCER, EXTRAORAL TRACER, GOTHIC ARCH TRACER, INTRAORAL TRACING, MANDIBULAR TRACER, PANTOGRAPHIC TRACING, STYLUS TRACING, TRACING DEVICE

THE JOURNAL OF PROSTHETIC DENTISTRY

Volume 117 Issue 55
Nesbit prosthesis • nonworking-side occlusal contact

nociceptive pathway:  afferent neural pathway that mediates pain impulses

nociceptor:  a sensory receptor preferentially sensitive to noxious or potentially noxious stimuli

nocurnal electromyography:  electromyographic registrations made during sleep

nonadjustable articulator:  an articulator that does not allow adjustment to replicate mandibular movements; comp, CAST RELATOR

nonanatomic teeth:  artificial teeth with occlusal surfaces that are not anatomically formed; the term nonanatomic as applied to artificial posterior teeth, and especially their occlusal forms, means that such teeth are designed in accordance with mechanical principles rather than from the viewpoint of anatomic replication; I. R. Hardy, DDS, first introduced nonanatomic teeth with flat occlusal surfaces set to a flat occlusal plane

Hardy IR. Technique for use of nonanatomic acrylic posterior teeth. Dent Digest 1942;48:562-66

Sears VH. Thirty years of nonanatomic teeth. J Prostheth Dent 1953;3:596-617

nonarcon articulator:  any articulator design in which the condylar element (analog) is part of the upper member of the articulator and may be used to simulate the 3D motions of the left and right condylar compartments; comp, ARCON, ARCON ARTICULATOR

noncarious cervical lesion:  the pathologic loss of hard tooth substance caused by biomechanical loading forces; such loss is thought to be the result of flexure and chemical fatigue degradation of enamel and/or dentin at some location distant from the actual point of loading; syn, ABFRACTION; comp, ABLATION, ABRASION, ATTIRI- TION, and EROSION

nonfunctional cusp bevel:  a feature of a crown preparation, prepared at an angle to the path of placement, which ensures provision of adequate restorative material thickness; on the axial surface of a non-cen- tric cusp; in normal occlusion, this refers to the lingual cusp of mandibular teeth and buccal cusp of maxillary teeth

nonfunctioning condyle:  a place or substance in an animal or plant where bacteria or other organisms lodge and multiply; nidi or niduses

night guard:  any removable device, usually made of hard polymethylmethacrylate, which covers the occlusal and incisal surfaces of all the teeth in one arch and maintains precise occlusal contact with the opposing teeth; syn, bite guard, OCCLUSAL DEVICE, occlusal appliance, occlusal splint; comp, DEVICE

NMR:  acronym for nuclear magnetic resonance; a radiologic procedure that gives images in any plane without radiation or any biologic aftereffect by measuring the radiofrequency from resonating hydrogen nuclei; syn, magnetic resonance imaging

noble metal:  those metal elements that resist oxidation, tarnish, and corrosion during heating, casting, or soldering and when used intraorally; examples include gold and platinum; comp, BASE METAL

noble metal alloy:  as classified by the American Dental Association (1984), any dental casting alloy containing a minimum of 25% by weight of Au, Pt, and/or Pd; comp, HIGH NOBLE METAL ALLOY

nociceptive:  applicable to a neuron receptive to painful sensations
nonworking-side occlusal contact • occlusal path

anterior guidance or group function on the working-side; nonworking-side contacts are desirable with removable complete dentures when establishing balanced articulation; syn, MEDICALLY ORIENTED OCCLUSAL CONTACT

notch: syn, PTERYGOMAXILLARY NOTCH

noxious stimulus: nôk’shas stîm’ya-las’: a tissue-damaging stimulus

nuance: nöö-ân’s, nyöö-, nöö-î’ns, nyöö-yàn (1781): 1. a subtle distinction or variation, such as in tone or color; 2. a subtle quality; 3. delicate shading; nuanced adj

null detector: nûl dî-têk’tor: a detector of the point at which there is no color difference between two samples; the human eye is an excellent null detector; it is considerably less trustworthy in estimating how large a given difference is

O

OBJ: abbr for OBJECT FILE FORMAT

object file format: a simple data-format that stores code for images by using 3D geometry

oblique ridge: ûô-blek’, a-blêk’ rîj: the elevation in the enamel that runs obliquely across the occlusal surface of a maxillary molar

obtundent: ûô-tûn’dant; n: an agent or remedy that lessens or relieves pain or sensibility

obturator: ôôb’-ta-râ’tar, n (ca. 1727): 1. a maxillofacial prosthesis used to close a congenital or acquired tissue opening, primarily of obturator, and de
 offend; an obturator prosthesis is classi

occlude: ǎ-klûd’: a verb meaning to close, cover, or maintain the integrity of the oral surfaces of the posterior teeth, prostheses, or occlusion rims

occlusal adjustment: ả-klûd’-zal, -säl a-jûst’-man’t; syn, OCCLUSAL RESHAPING; comp, ESTHETIC RESHAPING

occlusal analysis: ả-klûd’-zal, -säl a-näl’-tèks: a systematic examination of the occlusion with special consideration to the interocclusal relations of mounted casts

occlusal appliance: slang: syn, DEVICE, OCCLUSAL DEVICE

occlusal balance: ả-klûd’-zal, -säl bâl’-ans’t; a condition in which there are simultaneous contacts of opposing teeth or tooth analogues on both sides of the opposing dental arches during eccentric movements within the functional range

occlusal clearance

occlusal contact: ả-klûd’-zal, -säl kûn’tâk’t; 1. the touching of opposing teeth on elevation of the mandible; 2. any contact relation of opposing teeth; comp, DEFLECTIVE OCCLUSAL CONTACT, INITIAL OCCLUSAL CONTACT

occlusal correction: syn, OCCLUSAL ADJUSTMENT, OCCLUSAL RESHAPING

occlusal curve: ả-klûd’-zal, -säl kûr’-va-cho’r, -cha’n: the curve of the dentition in which the occlusal surfaces lie, when viewed in the frontal and sagittal planes

occlusal device: ả-klûd’-zal, -säl di-vîs’t: any removable artificial occlusal surface affecting the relationship of the mandible to the maxillae used for diagnosis or therapy; uses of this device may include, but are not limited to, occlusal stabilization for treatment of temporomandibular disorders, diagnostic overlay prior to extensive intervention, radiation therapy, occlusal positioning, and prevention of wear of the dentition or damage to brittle restorative materials such as dental porcelain; comp, bite guard, DEVICE, guard, MOUTH GUARD, occlusal appliance, OCCLUSAL SPLINT, ORTHOTIC DEVICE, STENT, SURGICAL SPLINT

occlusal disharmony: ả-klûd’-zal, -säl dis-hâr’-ma-nê’s: a phenomenon in which contacts of opposing occlusal surfaces are not in harmony with other tooth contacts and/or the anatomic and physiologic components of the craniofacial complex

occlusal dysesthesia: ả-klûd’-zal, -säl dis-the’-zha’n: unusual sensory perceptions during occlusal contact

occlusal embrasure: ả-klûd’-zal, -säl ẽm-brâ’-zhan’; the interdental space that is coronal to the contact area

occlusal equilibration: ả-klûd’-zal, -säl ict-wîl’-a-brâ’shun’: the modification of the occlusal form of the teeth with the intent of equalizing occlusal stress, producing simultaneous occlusal contacts or harmonizing cuspal relations

occlusal facet: syn, WEAR FACET

occlusal force: ả-klûd’-zal, -säl fôrs, fors’t; the result of muscular force applied on opposing teeth; the force created by the dynamic action of the muscles during the physiologic act of mastication; the result of muscular activity applied to opposing teeth

occlusal form: ả-klûd’-zal, -säl fôrm’t; the form the occlusal surface of a tooth or a row of teeth (GPT-4)

occlusal harmony: ả-klûd’-zal, -säl hâr’-ma-nê’s obs: a condition in maximal intercuspal position and eccentric jaw relation in which there are no interceptive or deflective contacts of occluding surfaces (GPT-4)

occlusal interference: ả-klûd’-zal, -säl in’tur’-i’r-ans’t; 1. any tooth contact that inhibits the remaining occluding surfaces from achieving stable and harmonious contacts; 2. any undesirable occlusal contact

occlusal path: ả-klûd’-zal, -säl pâth, path’ obs 1. a gliding occlusal contact; 2. the path of movement of an occlusal surface (GPT-4)
occlusal pattern |a-klō’zal, -sl pāt’ar|n; the form or design of the masticatory surfaces of a tooth or teeth based on natural, modified anatomic or nonanatomic teeth

occlusal plane |a-klō’zal, -sl plān|: 1. the average plane established by the incisal and occlusal surfaces of the teeth; generally, it is not a plane but represents the planar mean of the curvature of these surfaces; 2. the surface of wax occlusion rims contoured to guide in the arrangement of denture teeth; 3. a flat or curved template used in arranging denture teeth; comp, CURVE OF OCCLUSION

occlusal position |a-klō’zal, -sl pā-zhīsh’an| obs; the relationship of the mandible and maxillae when the jaw is closed and the teeth are in maximal intercuspal position; this position may or may not coincide with centric occlusion (GPT-4)

occlusal prematurity |a-klō’zal prē’ma-tyōōr-tē|: syn, DEFLECTIVE OCCLUSAL CONTACT

occlusal pressure |a-klō’zal, -sl prēsh’ar| obs; any force exerted on the occlusal surfaces of teeth (GPT-4)

occlusal reduction: the quantity (usually measured in millimeters) of tooth structure that is removed to establish adequate space for a restorative material between the occlusal aspect of the tooth preparation and the opposing dentition

occlusal reshaping |a-klō’zal, -sl rē-shāp’ing|s; any change in the occlusion intended to alter the occlusal surfaces of the teeth or restorations to change their form; syn, OCCLUSAL ADJUSTMENT, SELECTIVE GRINDING; comp, ESTHETIC RESHAPING, INCISAL REDUCTION, OCCLUSAL REDUCTION

occlusal rest |a-klō’zal, -sl rēst|s; a rigid extension of a removable partial denture that contacts the occlusal surface of a tooth or restoration, the occlusal surface of which is commonly prepared to receive this rest; comp, REST SEAT

occlusal rest arm |a-klō’zal, -sl rēst ārm| obs; a minor connector used to attach an occlusal rest to a major part of a removable partial denture (GPT-1)

occlusal rim: syn, OCCLUSION RIM

occlusal splint: syn, OCCLUSAL DEVICE

occlusal stability |a-klō’zal, -sl sta-bēl’tē|: the equalization of contacts that prevents tooth movement

occlusal stop slang: syn, OCCLUSAL REST

occlusal strength nonstand: syn, MASTICATORY FORCE

occlusal surface |a-klō’zal, -sl sūr’fās|s; a surface of a posterior tooth or occlusion rim that is intended to make contact with an opposing occlusal surface (GPT-1)

occlusal system |a-klō’zal, -sl sīs’tam| obs; the form or design and arrangement of the occlusal and incisal units of a dentition or the teeth on a denture (GPT-4)

occlusal table |a-klō’zal, -sl tā’bal|s; the portion of the occlusal surfaces of posterior teeth that lies within the perimeter of the cusp tips and marginal ridges; the functional portion(s) of the occlusal surface(s) of a posterior tooth or teeth

occlusal trauma |a-klō’zal, -sl trō’ma, trō’-|s; trauma to the periodontium from functional or parafunctional forces causing damage to the attachment apparatus of the periodontium by exceeding its adaptive and reparative capacities; it may be self-limiting or progressive; comp, PRIMARY OCCLUSAL TRAUMA, SECONDARY OCCLUSAL TRAUMA

occlusal vertical dimension |a-klō’zal, -sl vūr’tī-kal dī-mēn shūn|s: the distance between two selected anatomic or marked points (usually one on the tip of the nose and the other on the chin) when in maximal intercuspal position; syn, VERTICAL DIMENSION OF OCCLUSION

occlusal pattern ● opaque porcelain

occlusal wear |a-klō’zal, -sl wār’| loss of substance on opposing occlusal units or surfaces as the result of attrition or abrasion

occlusion |a-klō’shun| n (1645): 1. the act or process of closure or of being closed or shut off; 2. the static relationship between the incising or masticating surfaces of the maxillary or mandibular teeth or tooth analogues; comp, ARTICULATION, CENTRIC OCCLUSION, COMPONENTS OF OCCLUSION, ECCENTRIC OCCLUSION, LINE OF OCCLUSION, LINEAR OCCLUSION, MONOPLANE OCCLUSION, PATHOGENIC OCCLUSION, SPHERICAL FORM OF OCCLUSION

occlusion analysis |a-klō’shun a-nāl’tē-sës| obs; syn, OCCLUSAL ANALYSIS

occlusion record |a-klō’shun rēk’ar’d| obs; a registration of opposing occluding surfaces made at any maxillomandibular relationship (GPT-4)

occlusion rim |a-klō’shun rīm|s; occluding surfaces fabricated on interim or final denture bases for the purpose of making maxillomandibular relationship records and arranging teeth; syn, RECORD RIM, OCCLUSAL RIM

occult cleft palate |a-klō’t, ā-kūl’t, ā-kūll’t klēft pāl’it|s; a separation of muscle in the soft palate with mucous membrane covering the defect; this is often characterized by a notch in the hard palate, bifurcation of the uvula, displaced musculature, and an attenuated raphé; syn, SUBMUCOUS CLEFT PALATE

ocular prosthesis |ōk’əlar prōs’thē-sës| a maxillofacial prosthesis that artifically replaces an eye missing as a result of trauma, surgery, or congenital absence; the prosthesis does not replace missing eyelids or adjacent skin, mucosa or muscle; slang, artificial eye, glass eye; comp, INTERIM OCULAR PROSTHESIS, ORBITAL PROSTHESIS

odontalgia |ō-dōn-tāl’ja| n; toothache; pain in a tooth

odontogenous pain |ō-dōn-tāj’ə-nus pān|s; deep somatic pain originating in the dental pulp and/or periodontal ligament

odontograph |ō-dōn’ta-grāf| n; a device used to demonstrate irregularities occurring in the surface of tooth enamel

odontoplasty |ō-dōn’tə-plās’tē| n; the reshaping of a portion of a tooth

oligodontia |ō-līg-ōdōn’tē-ə| n; the formation of less than a full complement of teeth; many such teeth are smaller than normal

onlay |ōn’lā|, ā-n’lā| n; a partial-coverage restoration that restores one or more cusps and adjoining occlusal surfaces or the entire occlusal surface and is retained by mechanical or adhesive means; comp, PARTIAL-COVERAGE CROWN

onlay graft |ōn’lā|, ān’-gräft| (1998); augmentation of the height or width of the alveolar ridge with autologous bone or bone substitutes placed beneath the periosteum

opacity |ō-pās’tē| n (1611); the quality or state of a body that makes it impervious to light

opaque |ō-pāk| adj (1641); the property of a material that absorbs and/or reflects all light and prevents any transmission of light

opaque dentin; modified body porcelain with increased opacity, used where fewer translucencies are required, such as in the gingival area of a pontic or incisal mamelon to mimic existing anatomic features of adjacent natural teeth

opaque modifier; colored dental porcelain formulated to be selectively mixed with opaque porcelain to increase the saturation of the desired pigment

opaque porcelain; the first porcelain layer applied in the metal-ceramic technique to the underlying metal framework to establish the bond between the porcelain and metal while simultaneously masking the dark color of the metallic oxide layer; opaque porcelain provides the primary source of color for the completed restoration
open bite • overbite

open bite slang: syn. OPEN OCCLUSAL RELATIONSHIP; APERTOGNATHIA

open fracture 'ô̄pan frấk′char′z̩ any fracture in which there is an external wound leading to a break in the bone; syn. compound fracture

open occlusal relationship 'ô̄pan a-klando zal′ -sal r-i-li′shun-ship′z̩ the lack of tooth contact in an occluding position; comp. ANTERIOR OPEN OCCLUSAL RELATIONSHIP, APERTOGNATHIA, POSTERIOR OPEN OCCLUSAL RELATIONSHIP

open-source software: software that is licensed for unrestricted use and access to source codes

opening movement 'ô̄pa-nîng′z̩ movement of the mandible executed during jaw separation (GPT-1); syn. ENVELOPE OF MOTION
oral flora 'ô̄r′al′, flôr′a, ô̄r′ ə′ón′s: the various bacterial and other microbiota inhabiting the oral cavity
oral mechanism 'ô̄r′al′, ô̄r′- mék′a-nîz′um′z̩: the functioning structures of the oral cavity
oral mucosa 'ô̄r′al′, ô̄r′- myô̄-kô′sa′s: the lining of the oral cavity
oral orifice 'ô̄r′al′, ô̄r′- ô̄r′a-fi′s′, ô̄r′- ə′n′s: the longitudinal opening of the mouth between the lips that provides the entrance to the oral cavity
oral orthopedics 'ô̄r′al′, ô̄r′- ô̄r′ô̄-thâ′-pê′dlı̄s′: 1. a concept in dentistry concerned with postural relationships of the jaws, both normal and abnormal; 2. analysis of the harmful effects of an improper relationship of the mandible and the maxillae on dental and other related structures; 3. the diagnosis and correction of such unfavorable relationships and the treatment and/or prevention of the resulting discontinuities between the mandible and maxillae
orbital prosthesis 'ô̄r′bî-tl′ prô̄s′-thê′sî′s′: a maxillofacial prosthesis that artificially restores the eye, eyelids, and adjacent hard and soft tissues; comp. OCULAR PROSTHESIS
orbitering condiyle: syn. NONWORKING-SIDE CONDYLE
organ of mastication 'ô̄r′gan ūv mâ′s′-tî′-kâ′-shun′s: the combination of all the structures involved in the reception, mastication, and deglutition of food; syn. MASTICATORY SYSTEM
organic occlusion obs: syn. ANTERIOR PROTECTED ARTICULATION
orifice 'ô̄r′a-fi′s′, ô̄r′- ə′n′ (15c): an opening into a body cavity
ORMOCER: acronym for ORGAnically Modified CEramic; a three-dimensionally cross-linked copolymer with polymerizing side chains resulting in low volumetric polymerization shrinkage and less residual monomer
oronasal fistula 'ô̄r′a-nâ′-zal fîs′-cha-la′s: a pathologic opening between the oral and nasal cavities; syn. CONFLUENT DEFECT OF THE SINUS, ororostral communication
oropharynx 'ô̄r′a-fár′lin-gks′. n (1887): the part of the pharynx lying between the soft palate and the upper edge of the epiglottis; syn. ORAL PHARYNX, PARS ORALIS PHARYNGIS, PHARYNGO ORAL CAVITY, VESTIBULE OF THE PHARYNX
orthodontic band 'ô̄r′tha-dôn′tik′z̩: a metal orthodontic device that holds a bracket or tube and encirles a tooth
orthognathic surgery: surgical repositioning of all or part of the maxillae or mandible
orthognathous 'ô̄r′thô-gâ′-nath′ık′ adj: pertaining to or characterized by minimal protrusion of the mandible or minimal prognathism
Orthopantomogram adj, trade names: syn. PANORAMIC RADIOGRAPH
orthopedic craniofacial prosthesis 'ô̄r-thâ′-pê′-dlı̄k′ (1998): a dynamic orthopedic maxillofacial prosthesis used to maintain or position the craniofacial osseous segments that are malaligned as a result of trauma or craniofacial anomalies

orthotic device 'ô̄r-thô′-tîk di-viz′: a device designed to brace, activate, or supplement a weakened limb; in dentistry, any removable artificial occlusal surface affecting the relationship of the mandible to the maxillae used for diagnosis or therapy; syn. OCCLUSAL DEVICE, orthopedic repositioning appliance; comp. DEVICE
osseointegration n: 1. the apparent direct attachment or connection of osseous tissue to an inert, alloplastic material without intervening fibrous connective tissue; 2. the process and resultant apparent direct connection of an exogenous material’s surface and the host bone tissues, without intervening fibrous connective tissue present; 3. the interface between alloplastic materials and bone; orig. Per-Ingvar Branemark, physician/professor/surgeon, Sweden, 1982
osseous 'ô̄s′-e-æ′ adj (1707): bony
osseous graft: syn. BONE GRAFT
ossification 'ô̄s′-fi-kā′-shun′ n (1697): 1. the natural process of bone formation; the hardening into a bony substance; 2. a mass of ossified tissue
ostectomy 'ô̄s-těk′tô-mě̄ z̩ the excision of a bone or a portion of a bone, usually by means of a saw or chisel, for the removal of a sequestrum, the correction of a deformity, or any other purpose
osteitis 'ô̄s′-tî-ĭs′ n (ca. 1839): inflammation of bone
osteoarthritis 'ô̄s′-tē-Ô̄-ar-thî′tis′ n (1878): chronic degeneration and destruction of the articular cartilage and/or fibrous connective tissue linings of the joint components and discs, leading to bony spurs, pain, stiffness, limitation of movement, and changes in bone morphology; advanced conditions may involve erosions and disc degeneration with crepitus; syn. DEGENERATIVE JOINT DISEASE
osteocoduction: the process whereby bone grows on a surface or on a scaffolding that is conductive to bone deposition; this is a passive process; comp. OSTEIOINDUCTION
osteocoductive graft: a graft material that serves as a scaffold for new bone growth; this is a passive process
osteogenisis 'ô̄s′-tê-Ô̄-ji-nĬs′ n: development of bone; formation of bone
osteochondrauction 'ô̄s′-tê-Ô̄-in-dūk′shun′ n: the capability of chemicals or procedures to induce bone formation through the differentiation and recruitment of osteoblasts; phenotypic conversion of mesenchymal cells into osteoblasts; comp. OSTEOCONDUCTION
osteoporosis 'ô̄s′-tê-Ô̄-pô-rō′sî′s′ n (1846): a medical condition characterized by a decrease in bone mass with diminished density and concurrent enlargement of bone spaces, which produces porosity and fragility of bone; -rooses ō′-roʊ′sēz′ pl; osteoporotic adj
osteotome 'ô̄s′-tê-Ô̄-tô-mě́ n: a chisel for use in cutting bone
osteotomy 'ô̄s′-tê-Ô̄-tô-mě́ n: the surgical cutting of a bone; frequently used to also describe smoothing, leveling, or altering external contours of the bone; comp. ALVEOLECTOMY, ALVEOPLASTY
outline form: the shape of the area of a tooth preparation that is included within the cavosurface margins
ovate pontic: a pontic that is elliptically shaped on its tissue surface in two dimensions, typically partially submerged in a surgically prepared, soft-tissue depression to enhance the illusion that a natural tooth is emerging from the soft tissues
oven soldering: any soldering procedure that uses heat from a furnace to melt and fuse the solder as opposed to using a gas-air torch, gas-oxygen torch, or laser as the heat source; comp. LASER WELDING, SOLDER
overbite 'ô̄var-bit′ n, slang: syn. VERTICAL OVERLAP
overclosure \ˌər-kləˈzhar\; n: an occluding vertical dimension at a reduced interarch distance; an occluding vertical dimension that results in excessive interocclusal distance when the mandible is in the rest position; it results in a reduced interridge distance when the teeth are in contact

overdenture \ˌər-ˌdēnˈchər\; n: any removable dental prosthesis that covers and rests on one or more remaining natural teeth, the roots of natural teeth, and/or dental implants; a dental prosthesis that covers and is partially supported by natural teeth, natural tooth roots, and/or dental implants; nonstand\+syn. OVERLAY DENTURE, OVERLAY PROSTHESIS

overglaze \ˌər-ˈgla兹\ adj (1879): the production of a glazed surface by the addition of a fluxed glass that usually vitrifies at a lower temperature

overhang \ˌər-ˈhæŋ\; n (1864): excessive restorative material projecting beyond a cavity or preparation margin

overjet n Substant\+Syn. HORIZONTAL OVERLAP

overlay n Substant (1726): comp, HORIZONTAL OVERLAP, VERTICAL OVERLAP

overlay denture nonstand\+Syn. OVERDENTURE

overlay prosthesis nonstand\+Syn. OVERDENTURE

PACK: \pæk\ vt (14c): 1. to make into a compact form; 2. to completely fill; 3. to crowd together; 4. to compress; packability \pæk-a-bil-ti\ n: packable \pæk-a-bal\ adj

Pack \pæk\ n: any material used to protect tissue, fill space or prevent hemorrhage

packing \pækˈiŋ\ vt: the act of filling a mold; comp, DENTURE PACKING

PACKS: acronym for PICTURE ARCHIVING AND COMMUNICATION

PAEK: acronym for POLYARYLTHETKETONE; comprising a family of semi-crystalline thermoplastic polymers exhibiting high strength and shape stability over a wide range of temperatures; comp, PEEK

pain \pän\ n (13c): a subjective unpleasant sensory (afferent) and emotional experience associated with actual or potential tissue damage or described in terms of such damage; comp, ACUTE PAIN, CHRONIC PAIN, HETEROTROPIC PAIN, MASTICATORY PAIN, MUSCULOSKELETAL PAIN, MYOGENOUS PAIN, NEUROGENOUS PAIN, ODOTGENOUS PAIN, PRIMARY PAIN, PROJECTED PAIN, SECONDARY PAIN, VASCULAR PAIN, VISCERAL PAIN

palatal augmentation prosthesis \pəl-ə-tal ə-gənˈtənshən prəs-thez\; a removable maxillofacial prosthesis that alters the hard and/or soft palate’s topographical form adjacent to the tongue; it allows reshaping of the hard palate to improve tongue/palate contact during speech and swallowing to compensate for impaired tongue mobility as a result of surgery, trauma, or neurological or motor deficits

palatal bar bar: syn, PALATAL BAR CONNECTOR

palatal bar connector \pəl-ə-tal bär ka-nēkˈtōr\; a major connector of a maxillary removable partial denture that crosses the palate and has a characteristic shape that is half-oval anteroposteriorly with its thickest portion at the center of the bar connector

palatal cleft \pəl-ə-tal klēft\: 1. an opening in the roof of the mouth and/or in the functional soft palate; a deformity of the palate from improper union of the maxillary processes with the median nasal process during the second month of intrauterine development; 2. a cleft in the palate between the two palatal processes; if both the hard and soft palate are involved, it is termed URANOSTAPHYLO-SCHISIS; if only the soft palate is divided, it is termed URANOSCHISIS; syn, CLEFT PALATE, COMPLETE CLEFT PALATE, OCCULT CLEFT PALATE

palatal drop prosthesis slang: syn, PALATAL AUGMENTATION PROSTHESIS

palatal expansion \pəl-ə-tal ək-spānˈshən\: in orthodontics, the lateral movement of the maxillae to increase palatal width

palatal incompetence \pəl-ə-tal ĕn-kəm-pənˈtənts\: the inability of an anatomically intact soft palate to contribute to a functional palatopharyngeal sphincter usually because of disease or trauma of a neurogenic or muscular nature; lack of effective closure between the soft palate and one or more of the pharyngeal walls affecting swallowing or speech sounds that require high intraoral pressure; nasal reflux of fluids, escape of air during speech or hypernasality may result; syn, PALATOPHARYNGEAL INCOMPETENCE, VELOPHARYNGEAL DEFICIENCY

palatal insufficiency \pəl-ə-tal ĕn-sifˈən-sē\: an acquired or congenital anatomic inadequacy of the soft palate that makes the palatopharyngeal sphincter incomplete; lack of effective closure between the soft palate affecting swallowing or speech sounds that require high intraoral pressure; nasal reflux of fluids, escape of air during speech or hypernasality may result; syn, PALATOPHARYNGEAL INSUFFICIENCY, VELOPHARYNGEAL DEFICIENCY

palatal lift prosthesis \pəl-ə-tal lift prəs-thēz\: a maxillofacial prosthesis that elevates the soft palate superiorly and aids in restoration of soft palate functions that may be lost because of an acquired, congenital or developmental defect; a definitive palatal lift prosthesis is usually made for patients whose experience with a diagnostic palatal lift has been successful, especially if surgical alterations are deemed unwarranted; an interim palatal lift prosthesis is usually made as a diagnostic aid to assess the level of possible improvement in speech intelligibility; some clinicians believe use of a palatal lift prosthesis may stimulate an otherwise flaccid soft palate to increase functional activity, subsequently lessening its need

palatal lift prosthesis modification \pəl-ə-tal ə-lift prəs-thēz\: alterations in the adaptation, contour, form, or function of an existing palatal lift prosthesis necessitated to correct tissue impingement, lack of function, poor clasp adaptation, or the like

palatal plate \pəl-ə-tal plāt\: a major connector of a removable partial denture that covers a significant portion of the palatal surface

palatal seal: syn, POSTPALATAL SEAL

palatal stent: syn, SURGICAL STENT

palatal strap \pəl-ə-tal strap\: a major connector of a maxillary removable partial denture having an anteroposterior dimension not less than 8 mm that directly or obliquely traverses the palate; it is generally located in the area of the second premolar and first molar; comp, PALATAL BAR CONNECTOR, PALATAL PLATE

palatal vault \pəl-ə-tal vult\: 1. the deepest and most superior part of the palate; 2. the curvature of the palate; comp, SPACE OF DONDERS

palate \pəlāt\ n (14c): comp, HARD PALATE, SOFT PALATE

palatogram \pələ-təmˈgrəm\ n: a graphic representation of the area of the palate contacted by the tongue during a specified activity, usually speech

palatopharyngeal closure \pələ-təfərən jē-əl, -jəl, -fär’n-jē-əl klo͞-zhur\: a sphincter action sealing the oral cavity from the nasal cavity during swallowing and phonation by the synchronous movement of the middle third of the soft palate in a superior and posterior direction, the lateral pharyngeal wall medially, and the posterior walls of the pharynx anteriorly; syn, VELOPHARYNGEAL CLOSURE

overclosure • palatopharyngeal closure
palatopharyngeal inadequacy • partial-veneer crown

palatopharyngeal inadequacy pá-lat-f’-a-rë-n’-jé-al, -jal, -fár’in-jë-al in-adj’t-kwa-së’s; a condition where there is lack of effective closure between the soft palate and one or more of the pharyngeal walls during swallowing or speech sounds that require high intraoral pressure; nasal reflux escape of air during speech or hypernasality may result; this lack of closure may be the result of palatal incompetence, palatal insufficiency, or from lack of movement of the pharyngeal walls; comp, PALATAL INCOMPETENCE, PALATAL INSUFFICIENCY

palatopharyngeal incompetence pá-lat-f’-a-rë-n’-jé-al in-köm’-pi-tân’s; syn, PALATAL INCOMPETENCE; comp, PALATAL INSUFFICIENCY

palatopharyngeal insufficiency pá-lat-f’-a-rë-n’-jé-al in-sa-fish an-së’s; syn, PALATAL INSUFFICIENCY; comp, PALATAL INCOMPETENCE

palatopharyngeal sphincter pá-lat-f’-a-rë-n’-jé-al sfîng’k-tár’s; the functional sphincter that separates the nasopharynx and oropharynx during swallowing and phonation, formed by the posterior and superior movement of the middle third of the soft palate, the anterior movement of the posterior pharyngeal wall, and the medial movement of the lateral pharyngeal walls; comp, PALATOPHARYNGEAL CLOSURE; syn, VELOPHARYNGEAL SPHINCTER

palorrhaphy: surgical repair of a cleft palate

palillative pál’-é-a-tiv’, adj (1543); affording relief but not a cure

palpate pálp’s’t’ vb (1849); to examine by touch; palpated pálp’-pa-tid’, palpating pálp’-pa-tîng’, vt, palpation pálp’-pa-shun’ n

panoramic radiograph pá’n-á-räm’ik râ-ð’é-o-grêt’-s; a tomogram of the maxillae and mandible taken with a specialized machine; designed to present a panoramic view of the full circumferential lengths of the maxillae and mandible on a single film

panoramic radiography pá’n-á-räm’ik râ-ð’é-og’-ra-fë’s; a method of radiography by which a continuous radiograph of the maxillary and mandibular dental arches and their associated structures may be obtained

Panorex adj, trade name (1966); syn, PANORAMIC RADIOGRAPH

pantograph n syn, PANTOGRAPHIC TRACING

pantograph pá’n-ta-grêt’; n (1723): 1. an instrument used for copying a planar figure to any desired scale; 2. in dentistry, an instrument used to graphically record, in one or more planes, the paths of mandibular movement and to provide information for the programming of an articulator; Editorial note for usage: extraoral tracer (ing), intraoral tracer (ing), and tracing device are the primary terms; comp, ARROW POINT TRACER, CENTRAL BEARING TRACING DEVICE, CEPHALOMETRIC TRACER, COBLE BALANCER, EXTRAORAL TRACER, GOTHIC ARCH TRACER, INTRAORAL TRACING MANDIBULAR TRACER, NEEDLE POINT TRACING, PANTOGRAPHIC TRACING, STYLUS TRACING, TRACING DEVICE

pantographic tracing pá’n-ta-grêt’ik trâ’-sing’-t’s; a graphic record of mandibular movement usually recorded in the horizontal and sagittal planes as registered by styli on the recording tables of a pantograph or by means of electronic sensors

papilla pá’-pîl’a; n, (1713); any small, sessile or pedunculated tissue elevation; papillae pá’-pîl’î; pl; comp, INCISIVE PAPILLA, INTERDENTAL PAPILLA

papillary index: a visual analog score that uses a reference line bisecting a line between the gingival zenith of the teeth adjacent to the papilla and the tooth contact area; score values range from 0 (absent papilla), 1, 2, 3, 4 (hyperplasia); orig, Torsten Jemt, prosthodontist, Sweden, 1997; comp, PINK ESTHETIC SCORE

parafuncion pá’-râ’-fûng’k-shun; adj; disordered or perverted function

parallax pá’râ’-lëks’ n; a difference in the perceived location of an object when observed from two different points not on a straight line with the object

parallel attachment: syn, PRECISION ATTACHMENT

parallelocometer pá-år’-a-ë-löm’-tät-n’; n: 1. an instrument used for determining the exact parallel relationships of lines, structures, and surfaces in dental casts and prostheses; 2. an apparatus used for making one object parallel with another object, as in paralleling attachments and abutments for fixed dental prostheses or precision attachments for removable dental prostheses; syn, SURVEYOR

paralysis pá-år-rëls’-së’s; n (1525); a loss or impairment of motor function as the result of a trauma or pathosis

paresthesia pá-år’-ës-the’-zhe’; n; lacking normal afferent sensation, such as tingling or burning

partial-coverage crown: an artificial replacement that restores missing tooth structure by surrounding part of the remaining structure with a material such as cast metal alloy, ceramics, or resin; it is retained by mechanical or adhesive means; syn, ONLAY, THREE-QUARTER CROWN

partial-coverage restoration n; syn, ONLAY, PARTIAL-COVERAGE CROWN, PARTIAL-COVERAGE RETAINER, THREE-QUARTER CROWN

partial-coverage retainer: the component for a fixed partial denture that is an artificial replacement that restores missing tooth structure by surrounding part of the remaining structure with a material such as cast metal alloy, ceramics, or resin; it is retained by mechanical or adhesive means

partial denture pá’r’är shal dën’-chur’s; a removable partial denture or a fixed partial denture that restores a partially edentulous arch; Editorial note for usage: a partial denture can be described as a removable partial denture or a fixed partial denture based on the patient’s capability to remove or not remove the prosthesis, respectively; adjectives (modifiers) may be added to the clinical description of the partial denture, if needed, to designate the means of mechanical retention, such as, a screw retained fixed partial denture; any such prosthesis luted to dental implants (in the same manner as luting a fixed partial denture to natural teeth) needs no additional designation as to its means of retention; comp, BILATERAL DISTAL-EXTENSION REMOVABLE PARTIAL DENTURE, FIXED PARTIAL DENTURE, NESBIT, REMOVABLE PARTIAL DENTURE, PROSTHESIS

partial denture construction pá’r’är shal dën’-chur kon-strük’shun’; obs the science and techniques of designing and constructing partial dentures (GPT-4)

partial denture impression pá’r’är shal dën’-chur îm-prësh’an’s; a negative likeness of all supporting teeth and/or dental implants and tissues of a partially edentulous arch

partial denture rest pá’r’är shal dën’-chur rêst’; a rigid extension of a fixed or removable partial denture that prevents movement toward the mucosa and transmits functional forces to the teeth or dental implant

partial denture retention pá’r’är shal dën’-chur rê-tën’shun’; the ability of a removable partial denture to resist movement away from its foundation area and/or abutments

partial dislocation pá’r’är shal dîs’ lô-kâ-shun’; displacement of the articular disc resulting in a seriously impaired disc-condyle complex function

partial-veneer crown pá’r’är shal va-nir’ kroun’; n, nonstand: Editorial note for usage: this is a nonspecific term that does not distinguish between the partial-coverage crown restoration of the tooth and the partial veneering of an artificial crown; syn, PARTIAL-COVERAGE CROWN, PARTIAL-COVERAGE RETAINER
partitive color mixing \pər-tə-tıv \ː color mixing in which both additive and subtractive principles are involved; the eye interprets tiny dots of subtractive color too small to be individually resolved at the viewing distance; the resultant color will be the average of the colors used

Passavant’s pad: syn, PASSAVANT’S RIDGE

Passavant’s ridge: eponym for a prominence on the posterior wall of the nasal pharynx formed by contraction of the superior constrictor muscle of the pharynx during swallowing; contraction occurs at the level of the plane of the hard palate; orig, Philip Gustav Passavant, physician/surgeon, Germany, 1815-1893; syn, passavant’s cushion, PASSAVANT’S PAD

Passavant PG. Uber die Verschliessung des Schlunmdes beim Sprechen. Virchows Archiv Pathol Anat (Berlin) 1869;1:31

passivate \pə-sə-tv \ː vb (1913): 1. to render inactive or less reactive; 2. to protect against contamination by coating or surface treating; -ated: -ating vt

passivation \pə-sə-və-shən \ː n: a process whereby metals and alloys are made more corrosion resistant through surface treatment; this process produces a thin and stable inert oxide layer on the external surfaces

passive \pə-siv \ː adj (14c): 1. not active or in operation; inert; latent; 2. resistant to corrosion; 3. existing or occurring without being active, direct, or open

passivity \pə-sə-tv \ː n (14c): the quality or condition of inactivity or rest assumed by the teeth, tissues, and denture when a removable partial prosthesis is in place but not under masticatory pressure

path of insertion: the specific direction in which a prosthesis is placed on the residual alveolar ridge, abutment teeth, dental implant abutment(s), or attachments; syn, PATH OF PLACEMENT

path of placement \pə-path \ ɨv pləs \ə-mənt \ː the specific direction in which a prosthesis is placed on the residual alveolar ridge, abutment teeth, dental implant abutment(s), or attachments; syn, PATH OF INSERTION

path of withdrawal: syn, PATH OF INSERTION, PATH OF PLACEMENT

pathogenic occlusion \pə-thə-jə-nək \ː an occlusal relationship capable of producing pathologic changes in the stomatognatic system

patient history: the collected data about an individual, family, environmental factors (including medical and dental history), and any other information that may be useful in analyzing and diagnosing conditions or for instructional purposes

patient series: a collection of common diagnostic findings or treatment modalities within a group of patients

patient study: presentation of the diagnostic findings and treatment for a patient

patrix \pə-triks \ː n: the extension of a dental attachment system that fits into the recessed extension of the attachment, the matrix; patrices \pə-triks \əz \ː pl

pattern \pə-tərn \ː n (14c): a form that is used to make a mold; a model for making a mold; comp, OCCLUSAL PATTERN

pear-shaped area: syn; PEAR-SHAPED PAD

pear-shaped pad \pə-rə-shəp pəd \ː the most distal extension of attached keratinized mucosa overlying the mandibular ridge crest formed by the scarring pattern after extraction of the most posterior molar; it should be differentiated from the retromolar pad

pediatric speech aid prosthesis \pə-de-ə-tərk \ spekch aɪd prəs-thěs \ə \ː a temporary or interim maxillofacial prosthesis used to close a defect in the hard and/or soft palate of an infant or child; it may replace tissue lost as a result of developmental or surgical alterations. It is necessary for the production of intelligible speech; normal lateral growth of the palatal bones necessitates replacement of this prosthesis occasionally; intermittent revisions of the obturator section can assist in maintenance of palatal pharyngeal closure (termed a SPEECH AID PROSTHESIS MODIFICATION); frequently, such prostheses are not fabricated before the deciduous dentition is fully erupted because clasp retention is often essential; comp, BULB, CLEFT PALATE APPLIANCE, NASOPHARYNGEAL OBTURATOR, OBTURATOR, PROSTHETIC SPEECH AID, SPEECH AID

pedicle graft: an autogenous skin flap sustained by a blood-carrying stem from the donor site during transfer; in periodontal surgery, a flap used to increase the width of attached gingiva, or to cover a root surface, by moving the attached gingiva, which remains joined at one side with intact blood supply and then suturing the free end to an adjacent position

PEEK: acronym for POLY(ETHERETHERKETONE); poly (oxy-1,4-phenylenoxy-1,4-phenyleneacrylonitrile); a member of the PAEK family; a highly ordered, flexible, resilient, shape-stable, biocompatible polymer machined to final shape, used for removable partial denture frameworks and implant components; comp, PAEK

peg lateral incisor \pəég ətər-əl-in-sər \ː an undersized, tapered maxillary lateral incisor

dellucid \pə-łoo \s\əd \ː adj: reflecting light evenly from all surfaces without diffusion or distortion

pennyweight \n\ː abbr, pwt \ (from Latin denarius, a small silver coin + weight); abbr, pwt is also sometimes seen in publications; a unit of mass in the troy system used to measure precious metals and equivalent to 1.55 grams. Defined also as 24 grains in a pennyweight and 20 pennyweights in the troy ounce

perceived color \pə-rə-səd \ kəl \ː attribute of visual perception that can be described by color names: white, gray, black, yellow, orange, brown, red, green, blue, purple, etc., or by a combination of names

percussion \pər-kəs \n\ː n (1544): 1. the act of striking a part with sharp blows as an aid in diagnosing the condition of the underlying parts by means of the sound obtained; 2. in dentistry, striking a part with short, sharp blows as a diagnostic aid in evaluation of a tooth or dental implant by the sound obtained

periapical \pə-rē-ə-pə-kəl \, ə-pəl \ː adj: relating to tissues surrounding the apex of a tooth, including the alveolar bone and periodontal ligament

perikymata: small transverse ridges on the surface of the enamel of permanent teeth that represent overlapping prism groups within the enamel

perimolysis \pərɪ-mələ-si \ː (1998): acidic erosion of the teeth as a result of chronic gastric regurgitation.

periodontal \pərɪ-dəʊ-dən \tə \ː adj: pertaining to or occurring around a tooth

periodontometry \pərɪ-dəʊ-dən \tə-mə-tri \n \ː the measurement of tooth mobility

periosteum \pərɪ-əs-te-əm \n (1997): the membrane of connective tissue that closely invests all bones except at articular surfaces; –teal \tə-əl \ pl
peripheral seal • pink esthetic score

peripheral seal: syn, BORDER SEAL

periphery n (1571): -eries pl; syn, DENTURE BORDER

periradicular \pér-i-rād’ik-kyōō-lar\ adj: around or surrounding a tooth root

permanent dentition \pēr-mān-dēn-tis\n: the teeth that erupt after the primary dentition that do not shed under normal conditions

pharyngeal flap \fär’i-něj-əl, -jal, fär’i-něj-əl\: tissue elevated from the posterior pharyngeal wall and inserted into the soft palate to correct palatopharyngeal inadequacy

pharyngeal speech aid prosthesis: comp, DEFINITIVE OBTURATOR, INTERIM OBTURATOR, SPEECH AID PROSTHESIS, SURGICAL OBTURATOR

pharyngeal walls \fär’i-něj-əl, -jal, fär’i-něj-əl\: posterior and lateral walls of the naso- and oropharynx

pharynx \fär’iŋk’s\ (ca. 1693): an orifice of muscle and tissue between the mouth, nares, and the esophagus, which is the common pathway for food and air; the nasopharynx is above the level of the soft palate; the oropharynx lies between the upper edge of the epiglottis and the soft palate, whereas the laryngopharynx lies below the upper edge of the epiglottis and the openings into the esophagus and larynx; pharynges \fär’i-ning\ pl

phase transformation toughening: an increase in the fracture toughness of partially stabilized zirconia as a result of the transformation of the zirconia crystals in the vicinity of the tip of a propagating crack from the tetragonal phase to the monoclinic phase; this transformation does not prevent the crack from propagating, but makes it more difficult for the crack to advance; comp, stress-induced transformation toughening

phosphate-bonded investment: any casting investment with a binder formed from magnesium oxide and mono-ammonium phosphate; the resulting colloidal multimolecular material (NH₄MgPO₄•6H₂O)n coagulates around MgO and fillers; this is combined with silica in the form of quartz, cristobalite or both in a concentration of approximately 80%; upon heating, the binder undergoes several changes believed to be responsible for increased strength at higher temperatures; these investments exhibit considerable thermal expansion and can be used when casting higher fusing metal-ceramic alloys and partial denture frameworks

phosphorescence \fōf’a-rēz’s\ n (1796): a form of photo-luminescence based on the properties of certain molecules to absorb energy (either near ultraviolet or visible) and emit it in the form of visible radiation at a higher wavelength; distinguished from fluorescence in that light continues to be emitted for some time after the exciting energy has ceased; comp, FLUORESCENCE, LUMINANCE

photocatalysis n: syn, LIGHT-ACTIVATED POLYMERIZATION

photocatalysis \fō-tō-kāl’s\ n: reacting chemically to visible light or ultraviolet radiation

photometer \fō-tōm’ter\ n (1884): an instrument for the measurement of emitted, reflected, or transmitted light; for the measurement of luminous intensity, a visual receptor element (the eye) may be used as the measuring device, or a physical receptor element may be used that can be related to the calculated response of a standard observer; comp, PHYSICAL PHOTOMETER, VISUAL PHOTOMETER

photon \fō-tōn\ n (ca. 1922): a massless particle, the quantum of the electromagnetic field, carrying energy, momentum, and angular momentum; syn, light quantum

photopic vision \fō-tōp’ik ví-zh’ik\: vision as it occurs under illumination sufficient to permit the full discrimination of colors; it is the function of the retinal cones and is not dependent on the retinal rods; also called daylight vision as contrasted with twilight or scotopic vision

photoreceptor process \fō-tō-rē-sər tər prōt’sōr\: that specific process that is set in motion in a visual sensory end organ or other photic receptor by the incidence of its adequate stimulus, i.e., light

physical photometer \fiz’ik-kal fō-tōm’ter\: a photometer in which the measurement is made by some physical or chemical effect instead of by visual methods

physiologic \fiz’ē-a-lij’ik\ adj (1814): 1. characteristic of or conforming to the innate function of a tissue or organ; 2. pertaining to organic processes or to functions in an organism or in any of its parts; 3. the opposite of pathologic; syn, physiological \fiz’ē-a-lij’ik\ adj

physiologic occlusion \fiz’ē-a-lij’ik a-klō’s\n: occlusion in harmony with the functions of the masticatory system (GPT-4)

physiologic rest position \fiz’ē-a-lij’ik rēst pa-zh’ik\n: syn, REST VERTICAL DIMENSION, VERTICAL DIMENSION OF REST

physiologically balanced occlusion \fiz’ē-a-lij’ik ka-lāl’and s\n: a balanced occlusion that is in harmony with the temporomandibular joints and the neuromuscular system (GPT-4)

pick-up impression n: an impression that incorporates a prosthesis, framework, copings, or attachments for the purpose of making a cast as a relationship record within the arch; comp, COPING PICK-UP IMPRESSION, transfer impression

1. pick \pik’\ n (15c): a solution or bath for preserving or cleaning; any of various baths used in cleaning or processing

2. pick \pik\ vt (1552): to treat, preserve, or clean in or with an agent; pickled \pik’ed’, pickling \pik’ing

picture archiving and communication system: acronym is PACS; a medical imaging system for consolidating images originating from many sources

pier abutment: syn, INTERMEDIATE ABUTMENT

pigment \pīg’mant\ n (14c): finely ground, natural or synthetic, inorganic or organic, insoluble dispersed particles (powder), which, when dispersed in a liquid vehicle, may provide, in addition to color, many other essential properties such as opacity, hardness, durability, and corrosion resistance; the term is used to include an extender, white or colored pigments; the distinction between powders that are pigments and those that are dyes is generally considered on the basis of solubility; pigments are insoluble and dispersed in the material, and dyes are soluble or in solution as used

pin \pīn\ n (bef. 12c): a small cylindrical piece of metal; comp, ANTERIOR GUIDE PIN, CEMENTED PIN, FRICTION RETAINED PIN, SELF-THREADING PIN, STEINMANN’S PIN

pin-retained cast metal core: a cemented cast foundation restoration for an extensively damaged vital tooth, retained by cast tapered pins that are incorporated into the core and inserted into corresponding pinholes prepared in the tooth; an extracoronal restoration is subsequently placed over the core

pin-retained restoration: a restoration for an extensively damaged tooth that in part relies on threaded or cemented pins placed in the dentin for its retention and resistance form

pinhole n: a feature of a tooth preparation used to provide retention and resistance to displacement; typically a 1-2 mm hole is prepared into the dentin

pink esthetic score: a visual analog scale applied to the esthetics of gingiva; the seven parameters include: presence of a mesial papilla, presence of a distal papilla, curvature of the buccal tissues, level of the buccal mucosa, buccal convexity, color, texture; a value of
0 (disapproved), 1, or 2 (approve) is assigned to each parameter in comparison to a control; Rudolf Furhauser, prosthodontist, Austria, 2005; *comp*, PAPILLARY INDEX

**pink porcelain** nonstand: a term for the porcelain that replaces gingival tissues; *syn*, GINGIVAL PORCELAIN

**pinledge** [pin’lĭd] (n) (1998): a partial-coverage crown or retainer that incorporates pins that insert into corresponding pinholes prepared in the tooth

**placement** [plās’mant] vb: the process of directing a prosthesis to a desired location; the introduction of a prosthesis into a patient’s mouth; *syn*, DELIVERY, INSERTION, DENTURE PLACEMENT, PROSTHESIS PLACEMENT

**plane** [plān] n (1570): a flat surface defined by three points; *comp*, AXIS ORBITAL PLANE, CAMPER’S PLANE, CORONAL PLANE, CUSP PLANE, FRANKFORT HORIZONTAL PLANE, FRONTAL PLANE, HORIZONTAL PLANE, INCLINED PLANE, MANDIBULAR PLANE, MEDIAN PLANE, OCCLUSAL PLANE, SAGITTAL PLANE

**plane motion** [plān mō’shun] 1. motion that is a combination of rotation and translation in a given plane; the motion is described by instantaneous centers of rotation; 2. the combined motions of translation and rotation of a rigid body within a given plane

**plane of occlusion** *syn*, OCCLUSAL PLANE

**plane of reference** [plān ūv réf’ar-ans] any plane with defined landmarks from which measurements can be made; *syn*, HORIZONTAL PLANE OF REFERENCE

**plaster** [plās’tər] n in dentistry, the term “plaster” applies to a mixture consisting of water and β-calcium sulfate hemihydrate (CaSO₄·½H₂O); β-calcium sulfate hemihydrate (dental plaster) crystals are irregular and porous, created by dry heating the gypsum dihydrate under atmospheric conditions; dental stone is physically superior to dental plaster; *obs*, dental plaster of *Paris*

'1 plastic [plās’tik] adj (1632): 1. capable of being shaped or formed; 2. pertaining to the alteration or reformation of living tissues

'2 plastic [plās’tik] n (ca. 1909): any of numerous organic synthetic or processed materials that generally are thermoplastic or thermosetting polymers, usually of high molecular weight; they can be cast, extruded, molded, drawn, or laminated into films, filaments, and objects

**plastic base** [plās’tik bās] *obs* a denture or record base made of a plastic material (GPT-4)

**platform switching**: a concept of using a dental implant abutment of smaller diameter than the dental implant; longitudinal radiographic observation has demonstrated decreased vertical bone resorption

**platinum foil** [plāt’tə-nəm fōl] a precious-metal foil with a high fusing point that makes it suitable as a matrix for various soldering procedures, as well as to provide an internal form for porcelain restorations during their fabrication

**Pleasure curve** *eponym* for a type of curve of occlusion; *orig*, Max Pleasure, dentist, U.S.A., 1903-1965; *syn*, CURVE OF PLEASURE

**plunger cup** [plūn’ jer kūsp] a cup that tends to force food into interproximal areas

**pogonion** [po-gōn’ yən] n the most anterior point on the mandible

**point A** [pōnt ə] a bony landmark representing the deepest point of the premaxillary concavity between the anterior nasal spine and prosthion as viewed on a lateral cephalometric radiograph

**point angle** [pōnt ān’gəl] in the development of a cavity preparation, that place of convergence of three planes or surfaces; *comp*, LINE ANGLE

**point B**: *syn*, SUPRAMENTALE

'polish [pōl’išt] vb (14c): to make smooth and glossy, usually by friction; giving luster; the act or process of making a denture or casting smooth and glossy

'polish [pōl’išt] n (1704): a smooth, glossy surface; having luster

**polished denture surface** [pōl’išt dēn’chur sūr’fəs] *obs* *syn*, CAMEO SURFACE

**polished layer** *syn*, BEILBY LAYER

**polishing** [pōl’išt-iŋ] vb 1. to make smooth and glossy, usually by friction; to give luster to (GPT-1); 2. the act or process of making a denture or casting smooth and glossy (GPT-1)

**polishing agent** [pōl’išt-iŋ ə’jänt]s: any material used to impart luster to a surface

**poly[aryletherketone]**: acronym is PAEK; a family of semicrystalline thermoplastic polymers exhibiting high strength and shape stability over a wide range of temperatures; *comp*, PEEK, POLY (ETHERETHERKETONE), poly(etherketoneketone)

**poly[carboxylate cement]**: *syn*, ZINC POLYCARBOXYLATE CEMENT

**polyether** [pōl’é-ə-thər] n an elastomeric impression material of ethylene oxide and tetra-hydrofuro copolymers that polymerizes under the influence of an aromatic ester

**poly[etheretherketone]**: acronym is PEEK; a member of the PAEK family; a highly ordered, flexible, strong, shape-stable, biocompatible polymer machined to final shape, used for removable partial denture frameworks and dental implant components; *comp*, POLY(ARYLEETHERKETONE), poly(etherketoneketone)

**polymer** [pōl’ə-mər] n (1866): a chemical compound consisting of large organic molecules built by repetition of smaller monomeric units

**polymerization** [pə-lī’ər-ə-za’shən] n (1872): the forming of a compound by the joining together of molecules of small molecular weight into a compound of large molecular weight; the reaction uses chemical, heat, or light activation; *comp*, AUTOPOLYMERIZATION, CHEMICALLY-ACTIVATED POLYMERIZATION, HEAT-ACTIVATED POLYMERIZATION, LIGHT-ACTIVATED POLYMERIZATION

**polymerize** [pōl’ə-mər-īz] vb to affect a chemical reaction by joining together individual molecules to form large molecules made up of many repeated units

**poly[methylmethacrylate]** n a stable, hard transparent resin of marked clarity with a Knoop hardness number ranging from 18-20, a density of 1.19 and a tensile strength of approximately 60 MPa, a modulus of elasticity of approximately 2.4 GPa

**poly[oxymethylene]**: a thermoplastic polyaldehyde exhibiting flexibility, toughness, and clinically acceptable shape stability. The flexural modulus of these acetal resins exceeds that of all other thermoplastic, thermofomed flexible resins; *syn*, acetal resin

**poly[somnography]** [pōl’i-sōm-nə-gər-ē] n: the all-night recording of a variety of physiologic parameters (e.g., brain waves, eye movements, muscle tone, respiration, heart rate) as an aid in the diagnosis of sleep related disorders

**polysulfide** [pōl’sə-fīd] n (1849): an elastomeric impression material of polysulfide polymer (mercaptan) that cross-links under the influence of oxidizing agents such as lead peroxide

**poly[vinyl siloxane]** [pōl’é-vi’nəl sīl’ōks an’] n: an addition reaction silicone elastomeric impression material of silicone polymers having terminal vinyl groups that cross-link with silanes on activation by a platinum or palladium salt catalyst

**pontic** [pōn’tik] n an artificial tooth on a fixed partial denture that replaces a missing natural tooth, restores its function, and usually restores the space previously occupied by the clinical crown
porcelain • postsurgical maxillary prosthesis
porcelain ˈpor-sə-lin, ˈpôr-ˈ n (known in France, ca. 1540): a ceramic material formed of infusible elements joined by lower fusing materials; most dental porcelains are glasses and are used in the fabrication of artificial teeth for dentures, pontics and facings, metal-ceramic restorations, including fixed dental prostheses, as well as all-ceramic restorations such as crowns, laminate veneers, inlays, onlays, and other restorations
porcelain butt margin nonstandard: syn, PORCELAIN MARGIN
porcelain-fused-to-metal restoration: syn, METAL-CERAMIC RESTORATION
porcelain-fused-to-zirconia restoration: comp, ZIRCONIA RESTORATION
porcelain jacket crown obs, nonstandard: syn, CERAMIC CROWN
porcelain margin ˈpor-sə-lan, ˈpôr-ˈ la-bē-əl märˈjîn; the extension of ceramic material to the finish line of the preparation without visible metal substructure in the marginal area; syn, COLLARLESS METAL-CERAMIC CROWN, PORCELAIN BUTT MARGIN, SHOULDER PORCELAIN; comp, SHOULDER FINISH LINE
porcelain laminate veneer: a thin, bonded ceramic restoration that restores the facial, incisal, and part of the proximal surfaces of teeth requiring esthetic restoration; comp, FACING
porcelain release agent: any coating that facilitates separation of unfired porcelain from a die
porcelain veneer: layered porcelain that is bonded to a framework; comp, FACING, METAL-CERAMIC RESTORATION
porcelain wax technique: application of a mixture of body porcelain and wax (approximately 6:1 ratio by weight) to the die to achieve optimal adaptation of a porcelain margin of a metal-ceramic restoration
porosity ˈpo-rəs-tē, ˈpôr-ˈ n (14C): 1. the presence of voids or pores within a structure; 2. the state or quality of having minute pores, openings, or interstices; -ties pl comp, BACK PRESSURE POROSITY, OCCLUDED GAS POROSITY, SHRINK-SPOT POROSITY, SOLIDIFICATION POROSITY
positional record ˈpo-zish-ə-nal ˈrē-kər nonstandard: syn, JAW RELATION RECORD, MAXILLOMANDIBULAR RELATION RECORD
post: a post usually made of metal or fiber-reinforced composite resin that is fitted into a prepared root canal of a natural tooth; yttria-stabilized zirconia is also used as a post material; when combined with a core, it provides retention and resistance for an artificial crown; it is also used as a platform for retentive attachment systems and for a non-retentive overdenture post-coping
post-and-coping: a post with an incorporated coping; the coping encompasses the tooth root and functions as an abutment for an overdenture, fixed partial denture, or fixed complete denture; obs/ nonstandard/syn, POST-AND-DOME; syn, post-coping
post-and-core: a post with incorporated core; it provides retention and resistance for an artificial crown; it is also used as a platform for retentive attachment systems and non-retentive overdenture abutments
post-and-core crown ˈpo-stə-kôr, ˈkôr kranˈ; syn, RICHMOND CROWN
post-and-dome obs, nonstandard: syn, POST-AND-COPING
post-ceramic solder: 1. a soldering procedure to join metal-ceramic restorations after final shaping and glazing of the ceramic veneer; also used to join Type III or Type IV gold castings to metal-ceramic units; 2. an alloy formulated for post-ceramic soldering
post dam: syn, POSTPALATAL SEAL
post dam area: syn, POSTPALATAL SEAL AREA
posterior ˈpô-stêr-ər, ˈpô-ər- adj (1534): 1. situated behind or in back of; caudal; 2. in human anatomy, dorsal
posterior bite collapse slang: syn, POSTERIOR OVERCLOSURE
posterior border movement ˈpo-stêr-ər, ˈpô- bôr ˈdär mōˈv mantˈ; movements of the mandible along the posterior limit of the envelope of motion; comp, ENVELOPE OF MOTION, POSSELT'S ENVELOPE OF MOTION
posterior determinants of mandibular movement ˈpo-stêr-ər, ˈpô- ˈdî-têrmə-nant ˈvû mänˈdib-ə-lar mōˈv mantˈ; the temporomandibular articulations and associated structures; syn, DETERMINANTS OF MANDIBULAR MOVEMENT
posterior determinants of occlusion: syn, DETERMINANTS OF MANDIBULAR MOVEMENT
posterior open bite slang: syn, POSTERIOR OPEN OCCLUSAL RELATIONSHIP, comp, APERTOGNATHIA
posterior open occlusal relationship ˈpo-stêr-ər ˈo ˈpân a-ˈklōˌzl nəˈlə ˈshun-ˌshipˈ; lack of posterior tooth contact in any occluding position of the anterior teeth; comp, APERTOGNATHIA
posterior opening movement ˈpo-stêr-ər ˈo ˈpän-nîŋ mōˈv mantˈ; obs: the opening movement of the mandible about the terminal hinge axis (GPT-4)
posterior overclosure ˈpo-stêr-ər ˈo ˈvâr-ˈklōz ˈzhərˈ; the loss of occluding vertical dimension as a result of the loss or drifting of posterior teeth
posterior palatal seal: that portion of the intaglio surface of a maxillary removable complete denture, located at its posterior border, which places pressure, within physiologic limits, on the posterior palatal seal area of the soft palate; this seal ensures intimate contact of the denture base to the soft palate and improves retention of the denture; syn, postpalatal seal
posterior palatal seal area: the soft tissue area limited posteriorly by the distal demarcation of the movable and nonmovable tissues of the soft palate and anteriorly by the junction of the hard and soft palates on which pressure, within physiologic limits, can be placed; this seal can be applied by a removable complete denture to aid in its retention syn, POSTPALATAL SEAL AREA
posterior reference points ˈpo-stêr-ər ˈrēfərənz ˈpɔntsˈ; two points, located on each side of the face in the area of the transverse horizontal axis, which, together with an anterior reference point, establish the HORIZONTAL PLANE OF REFERENCE
posterior tooth form ˈpo-stêr-ər ˈtôth fôrmˈ; the distinguishing contours of the posterior teeth
postpalatal seal area ˈpo-st-pələt sēl ərˈe-ə; syn, POSTERIOR PALATAL SEAL AREA
postsurgical mandibular prosthesis: a maxillofacial prosthesis used to optimize intraoral/extroral contours to improve speech and deglutition after mandibular or contiguous soft tissue surgery because of a tumor ablation or the reconstruction of acquired or congenital defects where mandibular continuity is maintained or reestablished
postsurgical maxillary prosthesis: a maxillofacial prosthesis used to optimize maxillary contours to improve speech and deglutition after a maxillary resection as a result of a tumor or the reconstruction of acquired or congenital defects of the maxillae where there is no oroantral or oronasal communication
postsurgical prosthesis: comp, DEFINITIVE OBTURATOR, INTERIM OBTURATOR, POSTSURGICAL MANDIBULAR PROSTHESIS, POSTSURGICAL MAXILLARY PROSTHESIS

postural contraction: vpré’s chur-al kan-trák’shuň; that minimal tonic muscle activity necessary to resist the forces of gravity and thus maintain posture; maintenance of muscle tension (usually isometric) sufficient to maintain posture, dependent on muscle tone

postural position: vpré’s chur-al pa-zhš’an; any mandibular relationship occurring during minimal muscle contraction

Pound’s triangle: eponym for a triangle that extends from the mesial proximal contact of the mandibular canine to the buccal and lingual aspects of the retromolar pad; this triangle is used as a guide for the positioning of mandibular artificial teeth; the lingual surfaces of the posterior teeth should be within this triangle, close to the lingual line

pour hole: vpré’, pör hōh\ obs: an aperture in investment or any other mold material leading to the prosthesis space into which prosthetic material is poured (GPT-4)

pre-ceramic soldering: a soldering procedure joining framework components of a metal-ceramic prosthesis prior to application of the ceramic veneer

pre-extraction cast: comp, DIAGNOSTIC CAST, PRELIMINARY CASTS

precious metal: vpréš’as mětʃ; a metal containing primarily elements of the platinum group, gold, and silver

precious metal alloy: vpréš’as mětʃ’l āl’oi; a-loi; an alloy predominantly composed of elements considered precious, such as gold, the six metals of the platinum group (platinum, osmium, iridium, palladium, ruthenium, and rhodium), and silver

precision attachment: vpré-sz’h’un a-tächt mant; 1. a retainer consisting of a metal recepctacle (matrix) and a closely fitting part (patrix); the matrix is usually contained within the normal or expanded contours of the crown on the abutment tooth/dental implant and the patrix is attached to a pontic or a removable partial denture; 2. an interlocking device, one component of which is fixed to an abutment or abutments, and the other is integrated into a removable partial denture to stabilize and/or retain it; syn. ATTACHMENT

precision rest: vpré-sz’h’un rěst; a prefabricated, rigid metallic patrix in a fixed or removable partial denture that fits intimately into the matrix portion of a precision attachment in a restoration

preliminary cast: vpré-li’m a-něr ’e; a cast formed from a preliminary impression for use in diagnosis and/or the fabrication of a custom impression tray; syn, DIAGNOSTIC CAST, PREOPERATIVE CAST, STUDY CAST

preliminary impression: vpré-li’m a-něr e im-prēš’ahn; a negative likeness made for the purpose of diagnosis, treatment planning, and/or the fabrication of a custom impression tray

preload: n; the tension created in a screw, especially the threadings, when tightened; an engineering term used in dentistry to describe the degree of tightness or clamping force of a screw, usually in implant prosthodontics; comp, EMBEDMENT RELAXATION

prematurity: n, obs; syn, DEFLECTIVE OCCLUSAL CONTACT

premolar: n; a tooth that replaces a deciduous molar and is located distal to the canine and mesial to the permanent molar teeth; premolars have two or three cusp(s)

preoperative cast: vpré-ōp-ar-a-tiv, -ōp’ra-, -ōp-a-rā’ kāst; a positive likeness of a part or parts of the oral cavity for the purpose of diagnosis and treatment planning; syn, DIAGNOSTIC CAST, PRELIMINARY CAST, STUDY CAST

preoperative record: vpré-ōp’ar-a-tiv, -ōp’ra-, -ōp-a-rā’ rēk’ard; obs: any record made for the purpose of study or treatment planning (GPT-4)

preoperative wax try-in: a dental diagnostic procedure in which planned restorations are developed in wax on a diagnostic cast to determine optimal clinical and laboratory procedures necessary to achieve the desired esthetics and function; syn, DIAGNOSTIC DENTURE WAX-UP, SETUP, WAX TRY-IN

preprosthetic surgery: vpré-prōs-thē’t līk sūr’ja-rē’s; surgical procedures designed to facilitate fabrication of a prosthesis or to improve the prognosis of prosthodontic care

presolder: nonstands; syn, PRE-CERAMIC SOLDERING

pressed ceramics: n; a technique designed to produce a desired form by injecting a molten homogeneous ceramic material into a mold

pressed-on-metal ceramics: a technique designed to produce a desired form by injecting a molten homogeneous ceramic material into a mold containing a metal framework that is veneered with opaque porcelain; comp, METAL-CERAMIC RESTORATION

pressed-on-zirconia ceramics: a technique designed to produce a desired form by injecting a molten homogeneous ceramic material into a mold containing a zirconia framework that may be veneered with porcelain; comp, ZIRCONIA RESTORATION

pressure area: vpréš’ar’a; a region of mucosa that is being subjected to excessive pressure from a dental prosthesis

pressure indicating paste: vpréš’ar in’dī-kā-tīng pa’st; acronym is PIP; any substance applied to a dental prosthesis that when seated on a structure, demonstrates the adaptation of the prosthesis to the structure it opposes

pressure relief: vpréš’ar rī-lěf; obs: alteration of the denture-bearing surface of a denture to reduce force on the underlying tissues (GPT-4)

pressure welding: vpréš’ar wēl’ding; bonding of two metals together by sufficiently large force applied perpendicular to the surfaces; such force must be of magnitude to produce permanent distortions that expose a film-free metal contact

pretreatment records: vpré-trē’t mant rēk’ardz; any records made for the purpose of diagnosis, recording of the patient history, or treatment planning in advance of therapy

primary colors: vpré’měr ē-, ma-re kūl erz; three basic colors used to make most other colors by mixture, either additive mixture of lights or subtractive mixture of colorants

primary colors (additive): vpré’měr ē-, ma-re kūl erz ādă-tī-tiv; three colored lights from which all other colors can be produced by additive mixture; the three must be selected so that no one of them can be produced by mixture of the other two; generally, red, green, and blue are used; additive primaries are the complements of the subtractive primaries

primary colors (subtractive): vpré’měr ē-, ma-re kūl erz sab-trāk’ tiv; colors of three colorants or colored materials which, when mixed together subtract from one another, resulting in black or a very dark neutral color; subtractive primaries are generally cyan, magenta, and yellow

primary dentition: vpré’měr ē dĕn-tĭsh’an; the teeth that erupt first and are normally shed and replaced by permanent (successive) teeth; syn, DECIDUOUS DENTITION

primary hyperalgesia: vpré’měr ē hī’par-āl’gē zha; stimulation evoked primary pain as a result of lowered pain threshold

THE JOURNAL OF PROSTHETIC DENTISTRY
primary impression • prosthodontic diagnostic index

primary impression nonstands syn, PRELIMINARY IMPRESSION

primary occlusal trauma |prɪˈmɛr-ə-kloʊsəl ˈtrʌtʃ-məl|: the effects induced by abnormal or excessive occlusal forces acting on teeth with normal periodontal support

primary pain |prɪˈmɛr-ə pɛn\-əl|: pain that identifies the true source of nociceptive input

primary stability: contributing factors of mechanical stabilization of a dental implant during the healing phase

.primary impression |prɪˈmɛr-ə ɪmˈpreshən|, 1. in anatomy, a prominence or projection of bone; 2. in dentistry, any technique procedure that incorporates a number of steps; 3. the procedure of bringing about polymerization of dental resins for prostheses or bases; processes pl, syn, DENTURE PROCESSING

processed denture base |prɪˈsɛsd dɛnˈtʃur bās|: syn, DEFINITIVE DENTURE BASE

profile |ˈprɔ̆fi|: n (ca. 1656): an outline or contour, especially one representing a side view of a human head

profile record |ˈprɔ̆fil ˈrɛkˈɑr də|: a registration or record of the facial profile of a patient; comp, EMERGENCE PROFILE

prognathic |proʊˈɡænθɪk|, -nthik \n: a protruded position of the mandible in relation to the maxillae; obs, caput progeneum, exognathia, progenia, prognathia

prognathism |proʊˈɡænθɪzəm|: n (ca. 1864): an overgrowth of the mandible in an anteroposterior direction; a protrusion of the mandible in relation to the maxillae

prognosis |proʊˈnɔsɪs|: n (1655): a forecast as to the probable result of a disease or a course of therapy

progressive loading |proʊˈɡresɪv ləʊˈdɪŋ| (1998): the gradual increase in the application of force on a dental implant whether intentionally applied with a dental prosthesis or unintentionally applied with forces placed by adjacent anatomic structures or parafunctional loading

progressive mandibular lateral translation |proʊˈɡresɪv mænˈdɪbəl ˈlætər lətər ˈtræns-læʃən|: acronym is PMLT; the translatory portion of mandibular movement as viewed in a specific body plane that occurs at a rate or amount that is directly proportional to the forward movement of the nonworking-side condyle; syn, MANDIBULAR TRANSLATION: comp, EARLY IMMEDIATE MANDIBULAR TRANSLATION, IMMEDIATE MANDIBULAR LATERAL TRANSLATION, MANDIBULAR TRANSLATION

progressive side shift: syn, MANDIBULAR TRANSLATION, PROGRESSIVE MANDIBULAR LATERAL TRANSLATION

projected pain |prɪˈɡɛktəd ˈpeɪn|: heterotopic pain felt in the anatomical peripheral distribution of the same nerve that mediates the primary pain

proportional limit |ˈprɔʊˌpɔrtʃənəl ˈlɪmɪt|: that unit of stresses beyond which deformation is no longer proportional to the applied load

proprioception |ˈprɔpˌriːsəpˈʃən|: n (1906): the reception of stimulation of sensory nerve terminals within the tissues of the body that give information concerning movements and the position of the body; perception mediated by proprioceptors

prosthesis |prɒˈθɛs|: n (1900) [figure 1]: an artificial replacement of part of the human anatomy restoring form, function, and esthetics; -ses \-səz\: pl, comp, DEFINITIVE PROSTHESIS, DENTAL PROSTHESIS, INTERIM PROSTHESIS, MAXILLOFACIAL PROSTHESIS, PROVISIONAL PROSTHESIS, SURGICAL PROSTHESIS

Figure 1.

prosthesis placement: syn, PLACEMENT

prosthetic |prɒˈθɛtɪk|: adj (ca. 1890): relating to a prosthesis or prosthetics; prosthetically |prɒˈθɛtɪkəl|: adv

prosthetic dentistry: syn, PROSTHODONTICS

prosthetic dressing: a maxillofacial interim prosthesis veneered with a gauze-like dressing that artificially replaces a deficient anatomy of the face as a result of surgery, trauma, or congenital absence

prosthetic restoration |prɒˈθɛtɪk rəˈstɔrə|: obs: an artificial replacement for an absent part of the human body (GPT-4)

prosthetic speech aid: syn, ADULT SPEECH AID PROSTHESIS, PEDIATRIC SPEECH AID PROSTHESIS

prosthetics |prɒˈθɛtɪks|: n, pl but sing or pl in constr (ca. 1894): the art and science of supplying artificial replacements for missing parts of the human body; comp, MAXILLOFACIAL PROSTHETICS

prosthetist |prɒˈθɛtɪst|: n: a person involved in the construction of an artificial replacement for any part of the human body

prosthodontia |prɒsθəˈdɒntiə|, obs: syn, PROSTHODONTICS

prosthodontic diagnostic index: a clinical diagnostic index classification for (1) the edentulous patient, (2) the partially edentulous patient, and (3) the completely dentate patient; (refer to Appendix B, C and D) the classifications use specific diagnostic criteria to delineate treatment complexity into four classes: Class I (minimally compromised), Class II (moderately compromised), Class III (substantially compromised), or Class IV (severely compromised); copyrighted, American College of Prosthodontists © (2004)

prosthodontics \( \text{prōs-θā-dōn-tīks} \), n, pl but sing or pl in constr (1947): prosthodontics is the dental specialty pertaining to the diagnosis, treatment planning, rehabilitation, and maintenance of the oral function, comfort, appearance, and health of patients with clinical conditions associated with missing or deficient teeth and/or maxillofacial tissues by using biocompatible substitutes; comp, FIXED PROSTHODONTICS, IMPLANT PROSTHODONTICS, MAXILLOFACIAL PROSTHETICS, REMOVABLE PROSTHODONTICS

prosthodontist \( \text{prōs-θā-dōn-tīst} \), n (1917): 1. a specialist in prosthodontics; 2. a dentist who has successfully completed an advanced education program in prosthodontics that is accredited by the appropriate accrediting body; in the United States, that authoritative body is the Commission on Dental Accreditation of the American Dental Association; comp, BOARD-CERTIFIED PROSTHODONTIST, BOARD-ELIGIBLE PROSTHODONTIST, EDUCATIONALLY-QUALIFIED PROSTHODONTIST

protonalomalous vision \( \text{prō-tā-nŏm-ā-lūs} \), a form of color-deficient vision in which the ability to perceive blue and yellow is retained; hue discrimination is poor in the red to green region of the spectrum

protonopia \( \text{prō-tō-nō-pee-āl} \), a form of dichromatism in which red and blue-green stimuli are confused

protrusion \( \text{prō-trō-zhān} \), n (1646): a position of the mandible anterior to the centric relation without lateral deviation; comp, LATEROPROTRUSION

protrusive \( \text{prō-trōs-īv}, -sīv \) adj (1676): thrusting forward; adjective denoting protrusion; protrusively \( \text{prō-trōs-īv-lee} \) adv; protrusiveness \( \text{prō-trōs-īv-nēs} \), n

protrusive checkbite slang: syn, PROTRUSIVE INTEROCCLUSAL RECORD

protrusive condylar inclination: the angle formed by the path of the moving condyles within the sagittal plane compared with the horizontal plane (anterior-posterior movement); syn, SAGITTAL CONDYALAR INCLINATION

protrusive condylar path \( \text{prō-trōs-īv kŏn-ŭlĭ} \), -dl pātha the path the condyle travels when the mandible is moved forward from its initial position

protrusive deflection \( \text{prō-trōs-īv dĭ-flēktshūn} \), a continuing eccentric displacement of the midline incisal path on protrusion, symptomatic of a restriction of movement

protrusive deviation \( \text{prō-trōs-īv dĕ-vē-ă-shūn} \), a discursive movement on protrusion that ends in the centered position and is indicative of interference during movement

protrusive interocclusal record \( \text{prō-trōs-īv ĭn-ťar-ă-klöōz-ăl rēk-ar’dz} \), a registration of the mandible in relation to the maxillae when both condyles are advanced in the glenoid fossa

protrusive jaw relation \( \text{prō-trōs-īv jŏ-ră-shūn} \), jŏl relational result from a protrusion of the mandible (GPT-4)

protrusive movement: mandibular movement anterior to centric relation; comp, ECCENTRIC POSITION

protrusive occlusion \( \text{prō-trōs-īv a-klöōz-ŭshūn} \), a occlusion of the teeth when the mandible is protruded (GPT-4)

protrusive record: syn, PROTRUSIVE INTEROCCLUSAL RECORD

protrusive relation \( \text{prō-trōs-īv ră-lă-shūn} \); the relation of the mandible to the maxillae when the mandible is thrust forward (GPT-4)

provisional cementation: cementation of an interim or definitive restoration with a luting agent that has weak retentive properties to allow the planned future removal of the restoration

provisional denture: syn, INTERIM PROSTHESIS, PROVISIONAL PROSTHESIS

provisional prosthesis: a fixed or removable dental prosthesis, or maxillofacial prosthesis designed to enhance esthetics, stabilization, and/or function for a limited period of time, after which it is to be replaced by a definitive dental or maxillofacial prosthesis; often such prostheses are used to assist in determination of the therapeutic effectiveness of a specific treatment plan or the form and function of the planned definitive prosthesis; syn, INTERIM PROSTHESIS

provisional restoration: syn, INTERIM PROSTHESIS, PROVISIONAL PROSTHESIS

provisional splint \( \text{prə-vāz’hə-nal splīnt} \), an interim device designed to stabilize teeth during diagnosis or therapy; syn, INTERIM SPLINT

provisionalization nonstandard: syn, TEMPORIZATION

proximal \( \text{prōk-să-măl} \) adj (1727): 1. situated close to; 2. next to or nearest the point of attachment or origin, a central point especially, located toward the center of a body; comp DISTAL; proximally adj

proximal contact: syn, INTERPROXIMAL CONTACT

pseudoisochromatic color tests \( \text{soo-oô dō-i-săkrō-mătĭk kŭlăr tĕstĭs} \), tests for detecting color vision deficiency; the charts are made up of colored spots that yield a legible pattern (number, letter, figure, etc.) for a normal observer but yield no legible pattern for observers with anomalous types of color vision

psychophysical \( \text{sĭk-ō-fiz’ī-kăl} \) adj (1847): used to describe the sector of color science that deals with the relationship between physical description or specification of stimuli and the sensory perception arising from them

psychophysical color \( \text{sĭk-ō-fiz’ī-kăl kŭlăr’z} \), a specification of color stimulus in terms of operationally defined values, such as three tristimulus values

pterygoid implant: an endosseous implant placed through the maxillary tuberosity and engaging the pterygoid plate; indicated for retention of a dental prosthesis or maxillofacial prosthesis in the maxilla

pterygoid notch: syn, PTERYGOMAXILLARY NOTCH

pterygoid plates \( \text{tēr’ĭ-goid’ plătăz’} \), broad, thin, wing-shaped processes of the sphenoid bone separated by the pterygoid fossa. The inferior end of the medial plate terminates in a long curved process or hook for the tendon of the tensor veli palatini muscle. The lateral plate gives attachment to the medial and lateral pterygoid muscles

pterygomaxillary notch \( \text{tēr’ĭ-gă màk’-să-lēr’ ə-nōch’} \), the palpable notch formed by the junction of the maxilla and the pterygoid hamulus of the sphenoid bone; syn, HAMULAR NOTCH, PTERYGOMAXILLARY NOTCH

pulp \( \text{pūlp} \), n: the richly vascularized connective tissue of mesodermal origin with much innervation contained in the central cavity of the tooth

pulp capping \( \text{pūlp kăp’ĭng’z} \), application of a material to protect the pulp from external influences and promote healing, done either directly or indirectly

pulpectomy \( \text{pūlp-ĕk’tŏ-mē} \), n: the complete removal of the dental pulp

pulpitis \( \text{pŭl’ĭ-tîs’} \), n: inflammation of the dental pulp

pulpotomy \( \text{pŭl’p-ă-tă-mē} \), n: surgical amputation of the coronal portion of the dental pulp

1’mumice \( \text{pŭm’īs’} \), n (15c): 1. a type of volcanic glass used as an abrasive. It is prepared in various grits and used for finishing and
pulpotomy • reciprocal click

polishing; 2. a polishing agent, in powdered form, used for natural teeth and fixed and removable restorations

pumice r̂pü̈m̂is vt (15c): to dress or dress with pumice; pumiced r̂pü̈m̂is’d, pumicing r̂pü̈m̂is’ɪŋk̂-

PVAc-PE: acronym for vinyl acetate-ethylene copolymers; used in thermomolding

pyramidal fracture v̆p̈r̂a’m̂a-m̂îd̂ fr̈ā’k̂r̂ɛ̆k’sĥr̂u’n: a fracture of the midfacial bones, with the principal fracture lines meeting at an apex in the area of the nasion; syn, LE FORT II FRACTURE

Q

QD: acronym for L. Qad’que Di’e, every day

QH: acronym for L. Qua’que Ho’ra, every hour

QID: acronym for L. Qua’ter In Di’e, four times a day

QL: acronym for L. Quantum Libet, as much as desired

QOH: acronym for L. Qua’tue Qua’ta Ho’ra, every 4 hours; commonly noted as Q4H

quadrant v̆kŵd̂ ’r̂a’nt̂ n (15c): 1. any of the four quarters into which something is divided by two real or imaginary lines that intersect each other at right angles; 2. in dentistry, one of the four sections of the dental arches, divided at the midline; comp, SEXTANT

quartz v̆kŵr̂ɔ’t̂s n (ca. 1631): an allotropic form of silica; the mineral SiO₂ consisting of hexagonal crystals of colorless, transparent silicon dioxide

quick-cure resin slang; syn, AUTOPOLYMERIZING RESIN; CHEMICALLY-ACTIVATED POLYMERIZATION

R

rad obs (1953): acronym for radiation absorbed dose, a unit of measurement of the absorbed dose of ionizing radiation; the biologic effect of one rad varies with the type of radiation to which tissue is exposed; comp, GRAY, SIEVERT

radiation v̆r̂a’d̂e-a’šĥu’n n (1570): the emission of electromagnetic waves, such as light, short wave, radio, ultraviolet, or x-rays, or particulate rays such as alpha, beta, and gamma

radiation carrier v̆r̂a’d̂e-a’šĥu’n k̂âr̂e-ar’s: device used to administer radiation to confined areas by means of capsules, beads, or needles of radiation-emitting materials such as radium or cesium; its function is to hold the radiation source securely in the same location during the entire period of treatment; radiation oncologists occasionally request these devices to achieve a close approximation and controlled application of radiation to a tumor deemed amiable to eradication; syn, carrier prosthesis, intracavity applicator, intracavity carrier, radiation applicator, radium carrier, radiotherapy device

radiation cone locator v̆r̂a’d̂e-a’šĥu’n k̂ɔn̂ l̂ô k̂a-ta’r’s: a device used to direct and reduplicate the path of radiation to an oral tumor during a split course of irradiation; syn, DEVICE, DOCKING DEVICE

radiation shield v̆r̂a’d̂e-a’šĥu’n sĥi-l̂d̂: a intraoral device designed to shield adjacent tissues from radiation during orthovoltage treatment of malignant lesions of the head and neck region; syn, DEVICE, lead shield, RADIATION STENT, tongue protector

radiation shield positioner v̆r̂a’d̂e-a’šĥu’n sĥi-l̂d̂’p̂a-ẑîsĥn’ar’s: a custom-made device to direct, align, and protect adjacent tissues during irradiation; the shield/positioner will prevent radiation damage to tissues that are unaffected by a tumor; syn, DEVICE

radiation source device v̆r̂a’d̂e-a’šĥu’n ŝo-r̂s, ŝo-r̂s d̂i-vi’ς: custom-made device designed to align a radiation source to a specific anatomic site; syn, DEVICE

radiation stent: syn, DEVICE, RADIATION SHIELD
reciprocation \viri-sip ra-k'ar\shun\ n (1561): 1. the mechanism by which lateral forces generated by a retentive clasp passing over a height of contour are counterbalanced by a reciprocal clasp passing along a reciprocal guiding plane; 2. a mutual exchange; 3. an alternating motion; *reciprocative* \viri-sip ra-k'ar\ tiv\ adj

1 record \viri-kord\ vb (14c): 1. to register data relating to specific conditions that exist currently or previously; 2. to register permanently by mechanical means, such as jaw relationship; *comp*, INDEX

2 record \viri-kord\ n (14c): 1. an official document; 2. a body of known or recorded facts about someone or something; 3. a registration of jaw position; *comp*, CENTRIC RELATION RECORD, ECCENTRIC INTEROCCCLUSION RECORD, INTEROCCCUSAL RECORD, OCCLUDING JAW RECORD, TERMINAL JAW RELATION RECORD

record base \vri-kerd b\s\: an interim denture base used to support the record rim material for recording maxillomandibular records

record rim \vri-kerd rim\: the occlusal surfaces fabricated on a record base for the purpose of making maxillomandibular relationship records and/or arranging teeth; *syn*, OCCLUSION RIM

reduced interarch distance \vri-d\d\d\d in\tar-arch\: an occluding vertical dimension that results in an excessive interocclusal rest distance when the mandible is in the rest position and in a reduced inter-ridge distance when the teeth are in contact; *syn*, OVERCLOSURE

reduction \vri-d\d\d\d\d n (1546): 1. the correction of a fracture or dislocation; the restoration by surgical or manipulative procedures of a part to its normal anatomic location; 2. the removal of tooth structure to allow adequate thickness of a restorative material

reference plane locator \vri-air-\: a device used to facilitate location of the horizontal reference plane on the face of a patient

reflectance \vri-fi\d\k\d\k\n (1926): the ratio of the intensity of reflected radiant flux to that of the incident flux. In popular usage, it is considered as the ratio of the intensity of reflected radiant flux to that reflected from a defined reference standard; specular reflection is the angle of reflection equal to the angle of incidence; surface reflection is associated with objects having optically smooth surfaces; these objects are usually termed glossy; *comp*,GLOSS

reflection \vri-fi\d\k\d\shun\ (14c) n 1. the elevation and folding back of all or part of the mucosa to expose underlying structures; 2. the return of light or sound waves from a surface

refraction \vri-frak\shun\ n (1603): the deflection of light or energy waves from a straight path that occurs when passing obliquely from one medium into another in which its velocity is different

refractory \vri-frak\ ta-\o\r\ adj (1606): difficult to fuse or corrode; capable of enduring high temperatures

refractory cast \vri-frak\ ta-re\k\ast\: a cast made of a material that will withstand high temperatures without disintegrating; *syn*, INVESTMENT CAST

refractory die: any die material that is capable of enduring the high temperatures that occur during firing or casting procedures; the die is an integral part of the mold; the restoration is directly cast, molded, or fired onto the refractory die

refractory flask: *syn*, CASTING FLASK

refractory investment \vri-frak\ ta-re in-vest\man\: an investment material that can withstand the high temperatures used in soldering or casting

refractory mold \vri-frak\ ta-re mold\: a refractory cavity into which a substance is shaped or cast

**reciprocation • removable die system**

refractory prosthodontic patient: a patient unable to achieve treatment expectations despite the thoroughness or frequency of the treatment provided

regeneration \vri-jen-a-ra\shun\ n (14c): renewal or restoration of a body or bodily part after injury or as a normal process; *syn*, GUIDED TISSUE REGENERATION

registration \vri-\j\-str\a\shun\ n (1566): 1. the making of a record of the jaw relationships present, or those desired, thus allowing their transfer to an articulator to assist in the fabrication of a dental prosthesis; 2. a record made of the desired maxillomandibular relationship and used to relate casts to an articulator; *syn*, JAW RELATION RECORD, MAXILLOMANDIBULAR RELATIONSHIP RECORD, RECORD

reimplantation \vri-im-pl\-\:a\-\:shun\ n: the act of replacing a tooth in the same alveolar socket from which it had been removed, either surgically or as a result of trauma

relief \vri-lef\ n: 1. the reduction or elimination of undesirable pressure or force from a specific region under a denture base, artificial crown, or coping; 2. the creation of space in an impression tray for impression material; 3. coating of a die with a pain-on material to produce an oversized die dimension that allows for the flow of luting agent during cementation and eliminates any undesirable binding at the intaglio surface; *comp*, CUSTOM TRAY RELIEF

relief area \vri-lef\ \ar\-\:e\-\:l\: that portion of the dental prosthesis that is reduced to eliminate excessive pressure; that portion of a die that is relieved with a paint-on material

relief chamber: *syn*, RELIEF AREA

relining \vri-lin\ vt (1851): the procedures used to resurface the intaglio of a removable dental prosthesis with new base material, thus producing an accurate adaptation to the denture foundation area; *comp*, REBASE

remodel \vri-mod\ vt: the morphologic change in bone as an adaptive response to altered environmental demands. The bone will progressively remodel where there is a proliferation of tissue with regressive remodeling when osteoclastic resorption is evident

remount cast \vri-mount\: a cast formed inside the intaglio of a prosthesis for the purpose of mounting the prosthesis on an articulator

remount procedure \vri-mount\ pra-sej\ur\: any method used to relate restorations to an articulator for analysis and/or to assist in development of a plan for occlusal equilibration or reshaping

remount record index \vri-mount\ r\ek\a\rd in\d\eks\: a record of maxillary structures affixed to the mandibular member of an articulator useful in facilitating subsequent transfers; *syn*, FACEBOW PRESERVATION

removable appliance slang: *syn*, REMOVABLE DENTAL PROSTHESIS

removable bridge slang: *syn*, REMOVABLE DENTAL PROSTHESIS

removable complete denture: a removable dental prosthesis that replaces the entire dentition and associated anatomy of the maxillae or mandible; the removable complete denture can be readily inserted and removed from the mouth by the patient; *comp*, COMPLETE DENTURE

removable dental prosthesis \vri-moo\va-bal pr\o\s-\the\^\:s\:s\: a removable complete or partial denture, overdenture, or maxillofacial prosthesis that replaces some or all missing teeth; the dental prosthesis can be readily inserted and removed by the patient

removable die system: a segmented definitive cast system that permits accurate removal and replacement of dies of individually prepared teeth and partially edentulous areas
removable partial denture • rest seat

removable partial denture Vi-mō’va-bal pār‘shal dēn-cher’; a removable denture that replaces some teeth in a partially edentulous arch; the removable partial denture can be readily inserted and removed from the mouth by the patient

removable prosthodontics Vi-mō’va-bal prōs-tha-dōn tīks’; the branch of prosthodontics concerned with the replacement of teeth and contiguous structures for edentulous or partially edentulous patients by artificial substitutes that are readily removable from the mouth by the patient

replica Vĕp-lē-k’a; n (1852): 1. a reproduction or facsimile of an original; 2. a copy or duplicate, such as, a duplicate of the surface of a component of a dental implant used to process a restoration

repositioning Vĕ-pa-zh’ə-nǐng; n adj; the changing of any relative position of the mandible to the maxillae, usually by altering the occlusion of the natural or artificial teeth

repositioning splint Vĕ-pa-zh’ə-nǐng splint; nonstand, n; syn, OCCLUSAL DEVICE

residual bone Vi-zĭ-o-əl bŏn’; that component of maxillary or mandibular bone that remains after the teeth are lost

residual ridge Vi-zĭ-o-əl rĭd’; the portion of the residual bone and its soft tissue covering that remains after the removal of teeth

residual ridge crest Vi-zĭ-o-əl rĭd’ krĕst’; the most prominent continuous surface of the residual ridge, not necessarily coincident with the center of the ridge; syn, CREST OF RIDGE; comp, RESIDUAL RIDGE

residual ridge resorption Vi-zĭ-o-əl rĭd’ rĕ-sŏrb’ shun’, -zŏrb’-ə: a term used for the diminishing quantity and quality of the residual ridge after the teeth are extracted

resilient Vi-zĭl’ yant’; adj (1674): characterized or noted by resilience, as (1) capable of withstanding shock without permanent deformation or rupture or (2) tending to recover from or easily adjust to change; resiliently adv; syn, ELASTIC

resilient attachment Vi-zĭl’ yant-ə-tāch’mant’; n (1998): an attachment designed to give a tooth, soft tissue, or implant-borne removable dental prosthesis sufficient mechanical flexion to withstand the variations in seating of the prosthesis as a result of deformations of the mucosa and underlying tissues to avoid placing excessive stress on the abutments

resilient denture liner: an interim (ethyl methacrylate with phthalate plasticizers) or definitive (processed silicone) liner of the intaglio surface of a removable complete denture, removable partial denture, or intraoral maxillofacial prosthesis

resin Vi-rēz’-ĭn; n (14c): 1. any of various solid or semisolid amorphous natural organic substances that usually are transparent or translucent and brown to yellow; usually formed in plant secretions; are soluble in organic solvents but not water; are used chiefly in varnishes, inks, plastics, and medicine; and are found in many dental impression materials; 2. a broad term used to describe natural or synthetic substances that form plastic materials after polymerization; they are named according to their chemical composition, physical structure, and means for activation of polymerization; comp, AUTOPOLYMERIZING RESIN, COPOLYMER RESIN

resin-bonded prosthesis Vi-rēz’-ĭn-bŏn’ dĭd prōs-thē’ sĭs’; a fixed partial denture that is luted to tooth structures, primarily enamel, which has been etched to provide micro mechanical retention for the resin luting agent; early designs incorporated perforations on the lingual partial-coverage retainer (ROCHETTE BRIDGE) through which the resin luting agent passed to achieve a mechanical lock; subsequently, use of acid etching of the metal partial-coverage retainer (MARYLAND BRIDGE or RESIN-BONDED PROSTHESIS) eliminated the need for perforations; recently, ADHESIVE RESINS that bond to the metallic oxides of non-acid etched alloy or to the triborosilicate-coated alloy have been used; also recently, the resin impregnated fiber-reinforced composite resin (FRC) retainer and framework has eliminated the metal alloy; glass, polyethylene, and carbon fibers are used in resin-bonded prostheses

resin-bonded splint Vi-rēz’-ĭn bŏn’ dĭd splint; a fixed splint made of heavy wire, fibrous resin materials, and/or cast metal that is bonded to the labial or lingual surfaces of natural teeth with an acid-etch technique; it is used to stabilize traumatically displaced or peri-odontally compromised teeth

resin crown Vi-rēz’-ĭn kroun’; a resin restoration that restores a clinical crown without a metal substructure

resin-modified ceramics: a porous ceramic material interpenetrated by a polymer that can render a tougher dental material; comp, INTERPENETRATING PHASE COMPOSITE, RESIN MATRIX CERAMICS

resin-modified glass ionomer: a modified glass ionomer cement that incorporates polymerizing resin monomer and a cross-linking agent; this type of cement has a longer working time and is less sensitive to water contamination than conventional glass ionomer cements; syn, HYBRID IONOMER CEMENT; comp, GLASS IONOMER

resin-retained prosthesis: syn, RESIN-BONDED PROSTHESIS

resin-veneered restoration: a fixed restoration that uses a metal framework on which anesthetic resin veneer is applied

resistance form Vi-zĭs’ tans form’; the features of a tooth preparation that enhance the stability of a restoration and resists dislodgment along an axis other than the path of placement

resorption Vi-sŏrp’ shun’, zŏrb’-ə: n (1818): the loss of tissue substance by physiologic or pathologic processes; syn, ALVEOLAR RESORPTION

rest Vi-rĕst’; n (15c): 1. a projection or attachment, usually on the side of an object; 2. a rigid extension of a removable partial denture that contacts the occlusal, incisal, cingulum, or lingual surface of a tooth or restoration, the surface of which is commonly prepared to receive it; comp, CINGULUM REST, INCISAL REST, LINGUAL REST, OCCLUSAL REST, PARTIAL DENTURE REST, PRECISION REST, SEMIPRECISION REST

rest area: syn, REST SEAT

rest bite slang; syn, PHYSIOLOGIC REST POSITION

rest jaw relation Vi-rĕst jō’ rĭ-lā’ shun’; obs: the postural jaw relation when the patient is resting comfortably in an upright position and the condyles are in a neutral, unstrained position in the glenoid fossae (GPT-4); syn, PHYSIOLOGIC REST POSITION, VERTICAL DIMENSION OF REST

rest occlusion: syn, PHYSIOLOGIC REST POSITION

rest position: syn, PHYSIOLOGIC REST POSITION

rest relation: syn, PHYSIOLOGIC REST POSITION

rest seat Vi-rĕst sĕt’; the prepared recess in a tooth or restoration developed to receive the occlusal, incisal, cingulum, or lingual rest; syn, rest preparation, REST AREA
rest vertical dimension • ridge lap

rest vertical dimension  ː rɛst vɜːrˈtiː-kəl dɪ-ˈmɛnˈʃunː ː the postural position of the mandible when an individual is resting comfortably in an upright position and the associated muscles are in a state of minimal contractual activity syn, PHYSIOLOGIC REST POSITION, VERTICAL DIMENSION OF REST

restoration  ː rɛstərəˈʃən ː a broad term applied to any material or prosthesis that restores or replaces lost tooth structure, teeth, or oral tissues

removable partial denture  ː rɛməˈvərl ː a partial denture that engages an undercut on an abutment tooth at the terminal end of the infrabulge area of the abutment tooth

reverse curve  ː rɛvərs ː a helicoid curve of occlusion that, when viewed in the frontal plane, conforms to a curve in which the lingual surfaces of the teeth are more coronal to the buccal surfaces; in excessive wear of the teeth, the obliteration of the cusps and formation of either flat or cupped-out occlusal surfaces, associated with reversal of the occlusal plane of the premolar, first and second molar teeth (the third molars being generally unaffected), whereby the occlusal surfaces of the mandibular teeth slope facially instead of lingually and those of the maxillary teeth incline lingually; anteroposterior curve slopes inferiorly; comp, CURVE OF PLEASURE, CURVE OF SPEE

reverse occlusal curve  ː rɛvərs ː REVERSE CURVE

reverse swallow  ː rɛvərs ː a posterior location

reversible articulation  ː rɛvərsə ː ər-tɪkˈə-li ː an occlusal relationship in which the mandibular teeth are located facial to the opposing maxillary teeth; the maxillary buccal cusps are positioned in the central fossae of the mandibular teeth

retromolar trigone  ː rɛtəˈmʌrlər ː a triangular area of mucosa with the base posterior to the mandibular third molar, superior apex posterior to maxillary third molar, laterally limited to lateral buccal sulcus, medially limited to anterior tonsillar pillar; underlying anatomy includes the buccinator muscle, and superior pharyngeal constrictor muscle, the tendinous pterygomandibular raphe, and the deep tendon of the temporalis muscle

retruded contact  ː rɛtrəd ː dɪk kɔnˈtæktsː a contact of a tooth or teeth along the retruded path of closure; initial contact of a tooth or teeth during closure around a transverse horizontal axis; comp, CENTRIC OCCLUSION

retrusion  ː rɛtrəˈrən ː movement toward the posterior

reversive  ː rɛvərsəv ː adj: denotes a posterior location

reversal of lingual inclination  ː rɛvərsəl ː an anatomic area in the alveololingual sulcus just lingual to the retromolar pad

retromylohyoid area  ː rɛtrəˈmi-ˌloʊ- ː hyoid ɑr-ə-aː ː syn, RETRO-MYLOHYOID SPACE

retromylohyoid space  ː rɛtrəˈmi-ˌloʊ-ˌhɔɪd spɑːsː an anatomic area in the alveololingual sulcus just lingual to the retromolar pad

retromylohyoid curtain, inferiorly by the floor of the alveololingual sulcus, and lingually by the anterior tonsillar pillar when the tongue is in a relaxed position; retromylohyoid fossa

RICHMOND CROWN  ː rɪtʃmənd k्रɔːn ː an eponym for a post-retained crown made for an endodontically treated tooth that uses a porcelain facing; 2, an artificial crown with an attached metal post that fits the prepared natural tooth and inserts into the endodontically treated root canal; orig, C. M. Richmond, dentist, U.S.A., 1835-1902; obs, porcelain-faced dowel crown

ridge  ː rɪdʒ ː n ː (bef. 12c) an elevated body part; a long, narrow, raised crest; comp, ALVEOLAR RIDGE, CENTER OF THE RIDGE, CREST OF THE RIDGE, RESIDUAL RIDGE

ridge augmentation  ː rɪdʒ ː əɡ ˈmɛn-ə-tər ː shənː any procedure designed to enlarge or increase the size, extent, or quality of a deformed residual ridge

ridge crest  ː rɪdʒ ː krestː the highest continuous surface of the residual ridge not necessarily coincident with the center of the ridge

ridge lap  ː rɪdʒ ː ˈlæpː the surface of a pontic for a fixed partial denture that has been shaped to accommodate the residual ridge; the tissue

THE JOURNAL OF PROSTHETIC DENTISTRY
surface of a ridge lap design is concave and envelopes both the buccal and lingual surfaces of the residual ridge

ridge relation: syn, RIDGE RELATIONSHIP

ridge relationship [vé̂j rì-là shun-shíp\] the positional relationship of the mandibular residual ridge to the maxillary residual ridge

ridge resorption: syn, RESIDUAL RIDGE RESORPTION

ridge slope [vé̂j slop\] obs: the slope of the crest of the mandibular residual ridge from the third molar region to its most anterior aspect in relation to the inferior border of the mandible as viewed in profile (GPT-4)

rigid connector [vé̂j id ka-nêk̖ taa\]: a cast, soldered, or fused union between the retainer(s) and pontic(s) or splinted crowns

ringless investment technique: an investing technique that uses a removable cylindrical outer form permitting unrestricted expansion of the investment by comparison to the use of a steel casting ring

Roach clasp: eponym for INFRABULGE CLASP; orig, Finnis Ewing (Frank) Roach, prosthodontist, U.S.A., 1865-1960

Rochette Bridge: a resin-bonded fixed partial denture incorporating holes within the metal framework that lutes to the lingual aspect of teeth adjacent to an edentulous space and replaces one or more teeth; orig, Alain L. Rochette, physician/dentist, France; syn, RESIN-BONDED PROSTHESIS

Rockwell hardness number: acronym is RHN; a hardness measurement obtained from the depth of an indentation after use of a Rockwell hardness number:

RESIN-BONDED PROSTHESIS

aspect of teeth adjacent to an edentulous space and replaces one or more of the rigid components of the framework to gain access to and engage an undercut area

ridge lap • saturation

rotation [vé̂t-taa shun\] (n 1555): 1. the action or process of rotating on a mechanical center or on an axis; 2. the movement of a rigid body in which the parts move in circular paths with their centers on a fixed line called the axis of rotation; the plane of the circle in which the body moves is perpendicular to the axis of rotation

rotational center [vé̂t-taa shun sê̂n tu\] a point around which all other points in a body move

rotational line obs: syn, FULLCRUM LINE

rotational path removable partial denture [vé̂t-taa shun-al pâth rë-môv\-ô bal pâr shal dàn chur\]: a removable partial denture that incorporates a curved, arcuate, or variable path of placement allowing one or more of the rigid components of the framework to gain access to and engage an undercut area

rouge [vé̂t-ozh\] (n 1753): a compound composed of ferric oxide and binders used for imparting a high luster to a polished surface of glass, metal, or gems

RPD: acronym for REMOVABLE PARTIAL DENTURE

RPC: acronym for rest, proximal plate, and I-BAR; the clasp components of one type of removable partial denture clasp assembly

rugae [vé̂l-ô gä\] n, pl • gae • gê\, -gäl (ca. 1775): an anatomic fold or wrinkle—usually used in the plural sense; the irregular fibrous connective tissue ridges located in the anterior third of the hard palate

rugae area: syn, RUGAE

rugae zone: syn, RUGAE

S

saddle n, obs, slang: syn, DENTURE BASE

saddle pontic obs, slang: syn, RIDGE LAP

sagittal [sà-jì-tl\ adj (1541): situated in the plane of the cranial sagittal suture or parallel to that plane; syn, SAGITTAL PLANE

sagittal axis [sà-jì-tl a-k sì-s\: an imaginary anteroposterior line around which the mandible may rotate when viewed in the frontal plane

sagittal axis of the mandible: syn, SAGITTAL AXIS

sagittal condylar inclination: acronym is SCI; the angle formed by the path of the moving condyles within the sagittal plane compared with the horizontal plane (anterior-posterior movement); syn, HORIZONTAL CONDYLAR INCLINATION

sagittal plane [sà-jì-tl plàn\: any vertical plane or section parallel to the median plane of the body that divides a body into right and left portions

sand-blasting nonstand: syn, AIR ABRASION, AIRBORNE-PARTICLE ABRASION

sandwich technique: a restorative technique when applying a glass ionomer to dentin and then overlaying it with composite resin; the synergy of the two materials provides a physiomechanical and esthetic property; orig, John McLean, dentist, United Kingdom, 1985

sanitary bridge obs: syn, HYGIENIC PONTIC

sanitary pontic obs: a trade name originally designed as a manufactured convex blank with a slotted back; the name was used occasionally as a synonym for a hygienic pontic, wherein the pontic does not contact the residual ridge; syn, HYGIENIC PONTIC

saturation [sàch a-rà shùn\] n (1554): the attribute of color perception that expresses the degree of color (hue) intensity; syn, CHROMA
scaffold \ˈskāf-
əld\ n (14c): a supporting surface, either natural or prosthetic, which maintains the contour of tissue; a supporting framework

scallop \ˈskōl-
ap\ n (15c): one of a continuous series of circles

scalloplike \ˈskōl-
ap-
lık\ adj: having the appearance of a scallop

scalloplike \ˈskōl-
ap-
lık\ n (1737): to shape, cut, or finish in scallops; segments or angular projections forming a border

scanner: a device for the 3D acquisition of the surfaces of an object by mechanical contact, laser, or photographic image; comp, coordinate measuring machine, CONTACT SCANNER, LASER SCANNER, WHITE LIGHT SCANNER

scanning electron micrograph: acronym SEM; a micrograph of specimens that are coated with heavy metal and then scanned by an electron beam; the image is built up on a monitor screen (in the same way as the raster builds a conventional television image); the resolution is less than transmission electron microscopy, but the preparation is easier (often by fixation followed by critical point drying); the depth of focus is relatively large allowing significant magnification and observation of the specimen’s surface

scattered radiation \ˈskāt-
ərd rā-
dē-
ə-shən\ n: radiation that during passage through a substance has been deviated in direction; it may also have been modified by an increase in wavelengths. It is one form of secondary radiation

scattering \ˈskāt-
ə-rīŋ\ n (14c): diffusion or redirection of radiant energy encountering particles of a different refractive index; scattering occurs at any such interface, at the surface, or inside a medium containing particles

scattering coefficient \ˈskāt-
ə-rīŋ kō-
ˈtī-fish-
ənt\ n: single scattering coefficient of a particle in a medium with a different refractive index, expressed as a ratio between scattering cross section and geometric cross section of the particle; it should properly be called scattering efficiency, but in popular use, called scattering coefficient

scotopic vision \ˈskō-tō-
ˈpīk vī-
ˈshən\ n: vision that occurs in faint light or dark adaptation and is attributable to the retinal rods; the maximum of the relative spectral visual sensitivity is shifted to 510 nm and the spectrum is seen uncolored

scribe \ˈskrīb\ vt (1678): to write, trace, or mark by making a line or lines with a pointed instrument; scribbled, scribbling \ˈskrīb-
ə-
ˈbing\ n:

second-stage dental implant surgery \ˈse-kənd-
ˈstā dē-
ˈnê-prə-ē 
im-
ˈplänt 
sūr-
ˈja-
ˈrēs\ 1. for eposteal dental implant surgery, the term refers to the procedure involving placement of the eposteal framework fabricated after the first stage implant surgery; 2. for endosteal dental implant surgery, after surgical reflection, the occlusal aspect of the dental implant is exposed, the healing screw is removed, and either the interim or definitive dental implant abutment is placed; after these procedures, the investing tissues are (when needed) sutured

secondary bonds \ˈse-kər-
ˈid-ə-
ˈbōndz\ n: weak interatomic bonds arising from dipoles within atoms or molecules

secondary crown: syn, TELESOPIC CROWN

secondary dentition: syn, PERMANENT DENTITION

secondary fracture \ˈse-kər-
ˈi-də-ə-
ˈvē\ n: a fracture occurring as a consequence of infection, necrosis, or some other disease of the bone

secondary occlusal trauma \ˈse-kər-
ˈi-
ˈdə-ə-
ˈklō-
ˈzāl\ n: the effects induced by normal occlusal force acting on teeth with decreased periodontal support

secondary pain \ˈse-kər-
ˈi-
ˈdə-ə-
ˈpān\ n: heterotopic pain and/or secondary hyperalgesia induced by deep somatic pain as a central excitatory effect

section \ˈsek-
ˈshən\ n: the portion of a maxillofacial prosthesis that serves to fill a defect as a part of the prosthesis; syn, CONFORMER

sectional facial moulage impression: a procedure used to record the soft tissue contours of a portion of the face; occasionally several separate sectional impressions are made, and then reassembled to provide a full facial contour cast; the impression is used to create a partial facial mouilage and generally is not reusable

sectional impression \ˈsek-
ˈshən-
əl ˈim-
ˈprō-
ˈshən\ n: a negative likeness that is made in sections

segment \ˈseg-
ˈmænt\ n (1570): any of the parts into which a body naturally separates or is divided either actually or by an imaginary line or plane

Seibert classification: eponym for the classification of residual alveolar ridge form into three categories identified as class I, II, and III. Class I defects—faciolingual loss of tissue width with normal ridge height; Class II defects—loss of ridge height with normal ridge width; Class III defects—a combination of loss in both dimensions

selective grinding: syn, OCLUSAL RESHAPING

selective laser melting: acronym is SLM; an additive CAM continuous layering buildup process in which elemental metal or alloy powder deposition is closely followed by laser melting to create a finished shape under computer control

selective laser sintering: acronym is SLS; an additive CAM technique by sintering plastics, glass, or ceramics into 3D structures; comp, DIRECT METAL LASER SINTERING

self-curing resin slangs: syn, AUTOPOLYMERIZING RESIN

self-etching primer: a solution composed of acidic resin and volatile ingredients that simultaneously etches and primes dentin prior to the restorative composite resin bonding

self-separating plaster \ˈsɛl-
ˈsɛp-
ˈtə-
ˈrā-
ˈting plās-	ə-
ˈtār\ n: an impression plaster that disintegrates in hot water (GPT-4)

self-threading pin \ˈself-
ˈθrē-
ˈdĭŋ pīn\ n: a pin screwed into a hole prepared in dentin to enhance retention

sell a turcica \ˈsɛl-
ˈə-tūr-
ˈsē-
ˈkā\ n: a cephalometric landmark in the geometric center of the pituitary fossa of the sphenoid bone; a bony anatomic landmark

semi-adjustable articulator \ˈse-mē-
ˈā-
ˈdʒū-
ˈstə-
ˈbal ār-
ˈtik-
ˈyə-
ˈlā-
ˈtōr\ n: an articulator that allows adjustment to simulate mandibular movements; syn, Class III articulator

semi-anatomical teeth: modified denture tooth occlusal forms with a 20-degree or less cuspal incline

semiprecious metal alloy \ˈse-mē-
ˈpresh-
əl mē-
ˈtəl-
ˈō-
ˈnən-
ˈstānt\ n: an alloy composed of precious and base metals; there is no distinct ratio of components separating semiprecious alloys from another group. Editorial note for usage: the preferred terminology to be used with dental alloys is HIGH NOBLE ALLOY, NOBLE ALLOY, and BASE METAL

semiprecious attachment: a laboratory fabricated rigid metallic patina of a fixed or removable partial denture that fits into a matrix in a cast restoration, allowing some movement between the components; attachments with plastic components are often called semiprecious attachments even if prefabricated (not laboratory fabricated); comp, PRECISION ATTACHMENT

semiprecious rest \ˈse-mē-
ˈprī-
ˈsī-
ˈzhən-
ˈrəst\ n: a rigid metallic extension of a fixed or removable partial denture that fits into an intraoral preparation in a cast restoration
space analysis of Donders, interradicular space, retromylohyoid space, gingival space, interocclusal rest space, interproximal surgical planning. This applies to, but is not limited to, dental implant components, necessary for restorative materials relative to supporting anatomy; dependent on what occupies it; spatula to produce a homogenous mass from a liquid or surface particle contaminants) by means of application of high-frequency sound waves; cation porosity; occluded gas porosity, shrink-spot porosity, porosity in cast metal that is caused by shrinkage of a portion of the molten metal from surrounding areas; syn, back pressure porosity, occluded gas porosity, shrink-spot porosity, suck-back porosity; sonicate a delimited, 3D region; physical space independent of what occupies it; comp, denture space, interdental gingival space, interocclusal rest space, interproximal space, intraradicular space, retromylohyoid space, space of donders; synonym for the space that lies above the dorsum of the tongue and below the hard and soft palates when the mandible and tongue are in the rest position; origin, F.C. Donders, Donders F.C. Ueber den Mechanismus des Saugens. Pflugers Archiv fur die Gesamte Physiologie Des Menschen Und Der Tiere 1875;10:91-94; space length a delimited, 3D region; physical space independent of what occupies it; comp, denture space, interdental gingival space, interocclusal rest space, interproximal space, intraradicular space, retromylohyoid space, space of donders; synonym for the space that lies above the dorsum of the tongue and below the hard and soft palates when the mandible and tongue are in the rest position; origin, F.C. Donders, Donders F.C. Ueber den Mechanismus des Saugens. Pflugers Archiv fur die Gesamte Physiologie Des Menschen Und Der Tiere 1875;10:91-94; span length a delimited, 3D region; physical space independent of what occupies it; comp, denture space, interdental gingival space, interocclusal rest space, interproximal space, intraradicular space, retromylohyoid space, space of donders; synonym for the space that lies above the dorsum of the tongue and below the hard and soft palates when the mandible and tongue are in the rest position; origin, F.C. Donders, Donders F.C. Ueber den Mechanismus des Saugens. Pflugers Archiv fur die Gesamte Physiologie Des Menschen Und Der Tiere 1875;10:91-94; spatula a flat-bladed instrument used for mixing or spreading materials; spatulate shaped like a spatula; spatulate to work or treat with a spatula; ed/s spatulation the manipulation of material with a spatula to produce a homogenous mass; speaking space the space that occurs between the incisal and/or occlusal surfaces of the maxillary and mandibular teeth during speech; spectral curve syn, spectrophotometric curve; spectral reflection syn, spectrophotometric curve; spectral reflection the reflection in which the angle of reflection is equal to the angle of incidence; associated with objects having optically smooth (glossy) surfaces; syn, mirrored reflection; spectrophotometer a photometric device for the measurement of spectral transmissions, reflectance, or relative emissions; spectrophotometers are normally equipped with dispersion optics (prism or grating) to give a continuous spectral curve; spectrophotometric curve a curve measured on a spectrophotometer, hence, a graph of relative reflectance or transmittance (or absorption) as the ordinate, plotted versus wavelengths or frequency as the abscissa; the most common curves in the visible region use wavelength units of a nanometer, with the short wavelength to the left of the scale; the word spectral is frequently used in place of the longer spectrophotometric, but they are not necessarily synonymous; spectrum a band of colors produced when sunlight is passed through a prism; spatial arrangements of components of radiant energy in order of their wavelengths, wave numbers, or frequency; spectral adj; speech aid any therapy or any instrument, apparatus, or device used to improve speech quality; speech aid prosthesis a removable maxillofacial prosthesis used to restore an acquired or congenital defect of the soft palate with a portion extending into the pharynx to separate the oropharynx and nasopharynx during phonation and deglutition, thereby completing the palatopharyngeal sphincter; comp, adult speech aid prosthesis, pediatric speech aid prosthesis, pharyngeal speech aid prosthesis; speech articulation the movement and placement of the organs that serve to interrupt or modify the sounds in connected discourse; 1. the phonation of sounds in connected discourse; 2. the movement and placement during speech of the organs that serve to interrupt or modify the voiced or unvoiced air stream into meaningful sounds; 3. the speech function performed largely through the movements of the lower jaw, lips, tongue, and soft palate; speech bulb syn, speech aid prosthesis; speech prosthesis syn, speech aid prosthesis; spherical form of occlusion an arrangement of teeth that places their occlusal surfaces on the surface of an imaginary sphere (usually 8 inches in diameter) with its center above the level of the teeth (gpt-4); syn, curve of monson; sphincter a ringlike band of muscle fibers that constricts to close an orifice or passage; splint a rigid or flexible device that maintains in position a displaced or movable part; also used to keep in place and protect an injured part; 2. a rigid or flexible material used to protect, immobilize, or restrict motion in a part; comp, anderson splint, cap splint, essig splint, functional occlusal splint, gunning's splint, interdental splint, kingsley splint, labial splint, lingual splint, provisional splint, resin-bonded splint, soft splint, surgical splint, wire splint; splinting to immobilize, support, or brace; splinting syn, speech aid prosthesis; split-cast method a rigid or flexible device that maintains in position a displaced or movable part; also used to keep in place and protect an injured part; 2. a rigid or flexible material used to protect, immobilize, or restrict motion in a part; comp, anderson splint, cap splint, essig splint, functional occlusal splint, gunning's splint, interdental splint, kingsley splint, labial splint, lingual splint, provisional splint, resin-bonded splint, soft splint, surgical splint, wire splint;
split-cast mounting • stereolithography

split-cast mounting ≠ split-käst mont'ning: 1. a procedure for placing indexed casts on an articulator to facilitate their removal and replacement on the instrument; 2. the procedure for verifying the accuracy of the maxillomandibular relation record

split-dowel crown ≠ split-dou'al krown \ obs: an artificial crown supported and retained by a post that was split longitudinally in an attempt to use spring retention in an undersized post space; syn, DAVIS CROWN

split-thickness graft ≠ split-thik'nis gräft: a transplant of skin or mucous membrane consisting of epithelium and a portion of the dermis (skin) or lamina propria (mucous membrane)

spontaneous anterior dislocation: syn, MANDIBULAR DISLOCATION

sports dentistry ≠ sports dën'tsirē: all aspects of dentistry, either preventive or therapeutic, directly or indirectly involved with sports and recreation

spot grinding: syn, OCCLUSAL ADJUSTMENT, OCCLUSAL RESHAPING

sprue ≠ sprū: 1. the channel or hole through which plastic or metal is poured or cast into a gate or reservoir and then into a mold; 2. the cast metal or plastic that connects a casting to the residual sprue button

sprue button ≠ sprū būt'n: the excess material remaining at the base of the mold after a dental casting

sprue former ≠ sprū för'mar: a wax, plastic, or metal pattern used to form the channel or channels allowing molten metal to flow into a mold to make a casting

sprue pin: syn, SPRUE FORMER

stability ≠ stā-bil'T-tē: n (15c): 1. that quality of maintaining a constant character or position in the presence of forces that threaten to disturb it; the quality of being stable; to stand or endure; 2. the quality of a complete or removable partial denture to be firm, steady, or constant, to resist displacement by functional horizontal or rotational stresses; 3. resistance to horizontal displacement of a prosthesis; comp, DENTURE STABILITY, DIMENSIONAL STABILITY, OCCLUSAL STABILITY

stabilization ≠ stā-bal'i-zā'shun\ n, obs: the seating of a fixed or removable denture so that it will not tilt or be displaced under pressure (GPT-1)

stabilize ≠ stā-bal'iz\ vb (1861): 1. to make firm, steadfast, stable; 2. to hold steady, as to maintain the stability of any object by means of a stabilizer; -lized \'lizd\; -lizing \'li-zing\ vt, stabilization ≠ stā-bal'i-zā'shun\ n

stabilized record base ≠ stā-bal'izd rék'ard bās\ obs: a record base lined with a material to improve its fit and adaptation to the underlying supporting tissues; syn, RECORD BASE; comp, DEFINITIVE DENTURE BASE

stabilizing circumferential clasp ≠ stā-bal'i-zing sar-küm fa-rēn' shul klāsp\: a circumferential clasp that is relatively rigid and contacts the height of contour of the tooth without retentive force

ståin ≠ stān\ n (1583): 1. a soiled or discolored spot; a spot of color in contrast to the surrounding area; 2. a preparation used in staining; 3. in dentistry, the discoloration of a tooth surface or surfaces as a result of ingested materials, bacterial action, tobacco, and/or other substances; this may be intrinsic, extrinsic, acquired, or developmental; syn, characterization

ståin ≠ stān\ vb (14c): 1. to suffuse with color; 2. to color by processes affecting chemically or otherwise the material itself; 3. in dentistry, to intentionally alter restorations through the application of intrinsic or extrinsic colorants to achieve a desired effect; syn, to characterize a restoration

stanch ≠ stān ch\ vb 1. to check or stop the flow of; to stop the flow of blood from (a wound); 2. to stop or check in its course; 3. to make watertight

standard abutment: dental implant abutment with screw specifically referring to the original Branemark design; DENTAL IMPLANT ABUTMENT

standard illuminant ≠ stān'dard i'l-oō ma-nant's\ the illuminants A, B, C, D, (and others) defined by the CIE in terms of their relative power distribution curves. “A” is an illuminant with a Planckian temperature of approximately 2854 K. It is intended to represent a common tungsten filament source. “B” approximates solar radiation—4870 K—and is obsolete. “C” approximates daylight. 6740 K. “D” is daylight with the near ultraviolet source included

standard light source ≠ stān'dard lit sōrs, sōrs\ a reference light source whose spectral power distribution is known

standard observer ≠ stān'dard ob-zūr'vər: a hypothetical observer with a visual response mechanism possessing the colorimetric properties defined by the CIE in 1931 as representative of the human population having normal color vision

standard of care: the level of care that reasonably prudent healthcare providers in the same or a similar locality would provide under similar circumstances

standard tessellation language (STL): a digital file used in stereolithographic display and printing; the 3D image surface is interpreted by a series of triangles

staphylolischisis: a bifid uvula with or without cleft palate

static ≠ stā'tik\ adj: related to bodies at rest or forces in equilibrium

static fatigue ≠ stā'tik fa-tēg\: the delayed failure of glass and ceramic materials resulting from stress-enhanced reactions aided by water vapor acting on surface cracks; analogous to stress corrosion occurring in metals

static relation ≠ stā'tik ri-la'shun': the relationship between two parts that are not in motion

steam cleaning: the process of debris removal from a restoration, framework, or dental prosthesis through use of pressurized steam

Steinmann’s pin: eponym for a firm metal pin that is sharpened on one end; used for the internal fixation of fractures; orig, Fritz Steinmann, surgeon, Switzerland, 1872-1932

stenosis ≠ stē-nō'sis\ n (ca. 1860): a narrowing or constriction in the diameter of a passage or orifice; -noses pl; stenotic ≠ stē-nō'tik\ adj

stent ≠ stēnt\ n: eponym for any supplementary device used in conjunction with a surgical procedure to keep a skin graft in place; often modified with acrylic resin or dental modeling plastic impression compound that was previously termed Stent’s mass; also refers to any device or mold used to hold a skin graft in place or provide support for anastomosed structures; orig, Charles R. Stent, dentist, United Kingdom, 1845-1901; syn, SURGICAL STENT; comp, NASAL STENT

Stephan curve: a line graph representing the decreasing pH of dental plaques relative to time following a sugar or carbohydrate exposure

stereograph ≠ stē'rē-o-grāf, stīr\ vb (1859): syn, PANTOGRAPH

stereolithography: acronym is SLA; a computer numerical control (CNC) additive fabrication of an object; in dentistry, it relates to the laser initiation of light-reactive resin layering to make replicas of casts and devices; alternative to processes of casting, injection molding
and vacuum thermforming; orig., the photo sculpturing principle is credited to Francois Willeme, 1860; the term and manufacturing process is credited to Charles Hull, 1986; comp., fused deposition modeling, RAPID PROTOTYPING, SELECTIVE LASER SINTERING

STEREOTACTIC FACEBOARDS: the maxillary occlusal registration record obtained by means of a radiographic image and viewed in a raster graphic image

STEREOTACTIC SURGERY: surgery guided with the use of endoscopic or radiologic imaging; comp., robotic surgery, stereotactic body radiation therapy (SBRT), stereotactic radiosurgery; orig., Sir Victor Horsley, neurosurgeon, United Kingdom and Robert H. Clark, physiologist, United Kingdom, 1908

STERILE: free from living microorganisms; aseptic

STERILE TECHNIQUE: a standard surgical technique in which an aseptic area is established and maintained, including proper sterilization of instruments, drapes, gowns, gloves, and the surgical area; with respect to dental implant placement, the systemic maintenance of asepsis with special emphasis on non-contamination of instruments and implant elements throughout an implant placement procedure

STERILIZATION: the process of completely eliminating microbial viability

STIPPLE: to make small pointed indentations that together produce an even or softly graded shadow; 2. to speckle or fleck

STIPPLING: stippling

STRESS: force per unit area; a force exerted on one surface. The deformation caused in a body by an external force

STRESS-BEARING AREA: syn., STRESS-BEARING REGION

STRESS-BEARING REGION: the surfaces of oral structures that resist forces, strain, or pressures brought on them during function; 2. the portion of the mouth capable of providing support for a denture; syn., DENTURE FOUNDATION AREA

STRESS BREAKER: syn., STRESS DIRECTOR

STRESS CONCENTRATION: an area or point of significantly higher stress associated with a structural discontinuity such as a crack or pore

STRESS DIRECTOR: a device or system that relieves specific dental structures of part or all of the occlusal forces and redirects those forces to other load bearing structures or regions

STRESS DISTRIBUTION: avoiding stress concentration; allowing stresses to be dispersed; comp., STRESS

STRESS-STRAIN CURVE: the graphic representation of the tensile or compressive stress and associated strain of a material

STUDY CAST: comp., DIAGNOSTIC CAST, PRELIMINARY CAST, PRE-OPERATIVE CAST

STUMP SHADE: blunt or dull; in dentistry, a term referring to the tooth's dentin shade; syn., stump shade

STYLISTIC TRACING: a planar tracing that resembles an arrowhead or gothic arch made by means of a device attached to the opposing arches; the shape of the tracing depends on the location of the marking point relative to the tracing table, i.e., in the incisal region as opposed to posteriorly; the apex of a properly made anterior tracing is considered to indicate the correct relative position; Editorial note for usage: eXtraoral tracer (ing), intraoral tracer (ing), and tracing device are the primary terms; comp., ARROW POINT TRACER, CENTRAL BEARING TRACING DEVICE, CEPHALOMETRIC TRACER, COBLE BALANCER, EXTRAOORAL TRACER, GOTHIC ARCH TRACER, INTRAORAL TRACING, MANDIBULAR TRACER, NEEDLE POINT TRACING, PANTOGRAPHIC TRACING, TRACING DEVICE

SUB-ANTRAL AUGMENTATION: augmentation of the antral floor with autologous bone or bone substitutes to provide a host site for dental implants; syn., sinus lift, antrostomy

SUBCONDYLAR FRACTURE: a fracture beneath the condylar head and within the condylar neck

SUBGINGIVAL FINISH LINE: the tooth preparation finish line that is located apical to the crest of the free gingival margin; syn., INTRA-CEVICAL FINISH LINE

SUBGINGIVAL MARGIN: the restoration margin that is located apical to the crest of the free gingival margin; syn., INTRA-CEVICAL MARGIN

SUBLINGUAL: pertaining to the region or structures located beneath the tongue

SUBLINGUAL CREST: the crescent-shaped area at the anterior floor of the mouth formed by the lingual wall of the mandible and the adjacent sublingual fold. It is the area of the anterior alveolinguinal sulcus

SUBLINGUAL FOLD: the crescent-shaped area at the floor of the mouth following the inner wall of the mandible and tapering toward the molar region; formed by the sublingual gland and submandibular ducts

SUBLINGUAL FOSSA: a smooth depression on the lingual surface of the body of the mandible near the midline, above the mylohyoid line and below the alveolus; this fossa accommodates part of the sublingual gland

SUBLUXATION: an incomplete or partial dislocation that is self-reducing; comp., CONDYLAR SUBLUXATION

SUBMERSIBLE ENDOSTEAL IMPLANT: syn., ENDOSTEAL DENTAL IMPLANT

SUBMERSIBLE IMPLANT: syn., ENDOSTEAL DENTAL IMPLANT

SUBMUCOSAL INSERT: syn., MUCOSAL IMPLANT

SUBMUCOSAL CLEFT PALATE: syn., OCCULT CLEFT PALATE

SUBOCCLUSAL CONNECTOR: an interproximal nonrigid connector positioned apical to and not in communication with the occlusal plane
subperiosteal dental implant • surgical obturator

subperiosteal dental implant: a subperiosteal dental implant is an eposteal dental implant that is placed beneath the periosteum and provides support for a dental prosthesis by means of an implant that is embedded on the residual ridge beneath the periosteum.

suprabulge clasp: a removable partial denture clasp that approaches the retentive undercut from an occlusal or suprabulge direction.

supraocclusion: malocclusion in which the occluding surfaces of teeth extend beyond the normal occlusal plane; syn. SUPRAERUPTION.

supraoclusion: the deepest point of the symphyseal cavity between infradentale and pra-ak-s

support: 1. the foundation area on which a dental prosthesis rests; with respect to dental prostheses, the resistance to forces directed toward the basal tissue or underlying structures 2. to hold up, serve as a foundation, or prop.

supporting area: the surface of the mouth available for support of a denture (GPT-1); 2. those areas of the maxillary and mandibular edentulous ridges that are considered best suited to carry the forces of mastication when the dentures are in function (GPT-1).

supporting cusps: those cusps of teeth that contact in and support maximal intercuspal position; usually facial cusps of the mandibular posterior teeth and the maxillary palatal cusps.

suprabulge: n. movement of a tooth or teeth, along with the tooth-supporting structures, in discontinuity with the normal occlusal plane.

supragingival: a landmark representing the deepest point of the symphyseal cavity between infradentale and pogonion.

supraocclusion: malocclusion in which the occluding surfaces of teeth extend beyond the normal occlusal plane; syn. SUPRAERUPTION.

surface tension: a property of liquids in which the exposed surface tends to contract to the smallest possible area, as in the spherical formation of drops; a phenomenon attributed to the attractive forces, or cohesion, between the molecules of the liquid.

surfactant: n. a surface active substance (as a detergent) applied to a substrate to facilitate its wetting by another material.

surgical baseplate: a guide used to assist in establishing the desired occlusion during orthognathic or grafting surgery; syn. SURGICAL TEMPLATE; comp. SURGICAL STENT.

surgical guide: 1. any device used as a guide for surgically shaping the alveolar process or positioning of gingival tissues; 2. a guide used to assist in proper surgical placement and angulation of dental implants; 3. a guide used to assist in establishing the desired occlusion during orthognathic or grafting surgery; syn. SURGICAL TEMPLATE; comp. SURGICAL STENT.

surgical obturator: a temporary maxillofacial prosthetic insertion during or immediately following surgical or traumatic loss of a portion or all of one or both maxillae and contiguous alveolar structures (i.e., gingival tissue, teeth); frequent revisions of surgical obturators are necessary during the ensuing healing phase (approximately six months); further surgical revisions may require fabrication of another interim obturator (i.e., an initially planned small defect may be surgically revised and greatly enlarged.

surgical obturator: a guide used to assist in establishing the desired occlusion during orthognathic or grafting surgery; syn. SURGICAL TEMPLATE; comp. SURGICAL STENT.

surgical guide: a guide used to assist in establishing the desired occlusion during orthognathic or grafting surgery; syn. SURGICAL TEMPLATE; comp. SURGICAL STENT.

surgical obturator: a temporary maxillofacial prosthetic insertion during or immediately following surgical or traumatic loss of a portion or all of one or both maxillae and contiguous alveolar structures (i.e., gingival tissue, teeth); frequent revisions of surgical obturators are necessary during the ensuing healing phase (approximately six months); further surgical revisions may require fabrication of another interim obturator (i.e., an initially planned small defect may be surgically revised and greatly enlarged.

surgical obturator: a temporary maxillofacial prosthetic insertion during or immediately following surgical or traumatic loss of a portion or all of one or both maxillae and contiguous alveolar structures (i.e., gingival tissue, teeth); frequent revisions of surgical obturators are necessary during the ensuing healing phase (approximately six months); further surgical revisions may require fabrication of another interim obturator (i.e., an initially planned small defect may be surgically revised and greatly enlarged.
after the final pathologic report indicates margins are not free of cancer; comp, INTERIM OBTURATOR

surgical prosthesis /sur-va’ing/ any interim prosthesis prepared for insertion during a surgical procedure and intended for short-term use

surgical splint /sur-va’i-kal splint/ any device designed to use existing teeth and/or alveolar processes as points of anchorage to assist in stabilization and immobilization of broken bones during healing; it is used to re-establish, as much as possible, normal occlusal relationships, during the process of immobilization; frequently, an existing prosthesis (i.e., a patient’s removable complete denture) can be modified to serve as a surgical splint; frequently surgical splints have arch bars added to facilitate intermaxillary fixation. Rubber elastics may be used to assist in this process; circummandibular eyelet hooks can be used for enhanced stabilization with wiring to adjacent bone; comp, CAST METAL SPLINT, FENESTRATED SPLINT, Gunning SPLINT, KINGSLEY SPLINT, LABIOLINGUAL SPLINT, MODIFIED Gunning SPLINT

surgical stay plate nonstand, slang: syn, SURGICAL OBTURATOR

surgical stent /sur-va’i-kal stent/ eponym for a device used to apply pressure to soft tissues to facilitate healing and prevent cicatrization or collapse; orig, Charles R. Stent, dentist, United Kingdom, 1807–1885; syn, STENT; comp, columellar stent, periodontal stent, skin graft stent, SURGICAL GUIDE, SURGICAL TEMPLATE

surgical template /sur-va’i-ki kal temp’lit/ nonstand: syn, SURGICAL GUIDE; comp, SURGICAL STENT

survey /sur-va’i/ vb 1. to examine as to condition, value, or situation; to appraise; 2. to determine the form and position of a given entity by means of taking linear and angular measurements; 3. to inspect or scrutinize; 4. the procedure of locating and delineating the contour and position of the abutment teeth and associated structures before designing a removable partial denture (GPT-1); surveyed, surveying

survey line /sur-va’i- lin/ a line produced on a cast by a surveyor marking the greatest prominence of contour in relation to the planned path of placement of a restoration; syn, HEIGHT OF CONTOUR

surveyed diagnostic cast for fixed partial denture: a diagnostic cast after tooth preparations with the essential survey for diagnosis and treatment planning for a fixed partial denture; the cast is commonly used to ensure an acceptable path of placement and may be used to evaluate locations of precision attachments

surveyed diagnostic cast for removable partial denture: a diagnostic cast after tooth preparations with essential survey for diagnosis and treatment planning for a removable partial denture; the cast is used to determine an acceptable path of placement, guiding planes, location and measurement of retentive undercuts indicative with clasp flexibility, location of tooth and bony interferences, a favorable design relative to aesthetics, charting of existing foundation restorations relative to design, location of occlusal contacts relative to design, location of horizontal height of contours, and placement of tripod marks; comp, DEFINITIVE CAST, DIAGNOSTIC CAST

surveyed definitive cast for removable partial denture: a master cast after tooth preparations with survey for blockout and duplication or optical scan for a removable partial denture; this cast is used to determine an acceptable path of placement, guiding planes, location and measurement of retentive undercuts indicative with clasp flexibility, location of tooth and bony undercuts, location of occlusal contacts relative to design, location of horizontal height of contours, and placement of tripod marks; comp, DIAGNOSTIC CAST, MASTER CAST

surgical obturator ● telescopic denture

surveying /sur-va’ing/ n an analysis and comparison of the prominence of intraoral contours associated with the fabrication of a dental prosthesis

surveyor /sur-va’or/ n (15c): a parallelling instrument used in making a dental prosthesis to locate and delineate the contours and relative positions of abutment teeth and associated structures; syn, PARALLELOMETER

suturing /sur-cho’ing/ vt (1777): the process of uniting the tissues separated by either a traumatic or a surgical wound in a specific manner by using an appropriate material

swage /swaj/ n (ca. 1812): any tool used for shaping metal by striking with a hammer or sledgehammer

swaging /swaj’ing/ vt (1881): to shape a material by hammering or adapting it onto a die with a swage instrument; swaged /swaj’d;

swallowing threshold /swol’i-ing thrith’iold/ the critical moment of reflex action initiated by sufficient stimulation before the act of deglutition

sympathetic nervous system /sur-mi pa-thet’ik nur’vas si’tum/ the part of the autonomic nervous system that responds to dangerous or threatening situations by preparing a person physiologically for “fight or flight”; comp, PARASYMPATHETIC NERVOUS SYSTEM

symptoms /sur-mi’si/n (ca. 1578): 1. a type of cartilaginous joint in which the opposed bony surfaces are firmly united by a plate of fibrocartilage; 2. the immovable dense midline articulation of the right and left halves of the adult mandible; physes pl

syndrome /sur-drom’/ n (1541): a group of signs and/or symptoms that occur together

syneresis n the separation of water from its component base, for example, a gel or impression material

synovial fluid /sin’o-vel’ed flou’id/ a viscid fluid contained in joint cavities and secreted by the synovial membrane

synovial membrane: the articular membrane composed of specialized endothelial cells capable of producing synovial fluid filling the joint cavity surrounded by the membrane

systemic etiologic factors /sur-’i-stem’ik e-le-o’lijik/fak tur’is: generalized biologic factors that are implicated in the causation, modification, and/or perpetuation of a disease entity

table /t’a-bal/ n (bef. 12c): a flat surface; a raised horizontal surface; comp, GUIDE TABLE, OCCLUSAL TABLE

taper: in dentistry, the angle, measured in degrees as viewed in a given plane, formed between an external wall and the path of placement of a tooth preparation or machined surfaces on a metal or ceramic material when prepared for fixed dental prosthesis; comp, CONVERGENCE ANGLE, TOTAL OCCLUSAL CONVERGENCE ANGLE

technique /teh-nek’/ n (1817): a body of technical methods; a method of accomplishing a desired end; the method or procedure and its details

telescopic coping: syn, COPING

telescopic crown /teh’i-skop’ik kroun/ an artificial crown (framework) constructed to fit over a coping, another crown, a bar connector or any other suitable rigid support for the dental prosthesis; comp, COPING

telescopic denture nonstand: syn, OVERDENTURE
temporomandibular articulation: syn, TEMPOROMANDIBULAR JOINT
temporomandibular disorders \tèm·pa-rò·mân-dib·ya-lar dis·ôr·derz\ 'acronym is TMD; 1. conditions producing abnormal, incomplete, or impaired function of the temporomandibular joint(s) and/or the muscles of mastication; 2. (obs) a collection of symptoms frequently observed in various combinations first described by Costen (1934, 1937), which he claimed to be reflexes because of irritation of the auriculo-temporal and/or chorda tympanica nerves as they emerged from the tympanic plate caused by altered anatomic relations and derangements of the temporomandibular joint associated with loss of occlusal vertical dimension, loss of posterior tooth support, and/or other malocclusions; the symptoms can include headache about the vertex and occiput, tinnitus, pain about the ear, impaired hearing, and pain about the tongue
temporomandibular dysfunction syndrome: syn, TEMPOROMANDIBULAR DISORDERS
temporomandibular joint \tèm·pa-rò·mân-dib·ya-lar joint\ 1. the articulation between the temporal bone and the mandible. It is a bilateral diarthrodial, bilateral ginglymoid joint; 2. the articulation of the condylar process of the mandible and the intra-articular disc with the mandibular fossa of the squamous portion of the temporal bone; a diarthrodial, sliding hinge (ginglymus) joint; movement in the upper joint compartment is mostly translational, whereas that in the lower joint compartment is mostly rotational; the joint connects the mandibular condyle to the articular fossa of the temporal bone with the TEMPOROMANDIBULAR JOINT ARTICULAR DISC interposed
temporomandibular joint articular disc: relative to the temporomandibular joint, the articular disc is a fibrous connective tissue disc located between the articular surfaces of the mandibular condyle and the temporal bone; syn, ARTICULAR DISC, DISC
temporomandibular joint derangement: a deviation in position or form of the tissues within the capsule of the temporomandibular joint; an abnormal relationship of the articular disc to the condyle, fossa, and/or articular eminence; syn, INTERNAL DERANGEMENT, JOINT DERANGEMENT
temporomandibular joint hypermobility \tèm·pa-rò·mân-dib·ya-lar joint hi·par-mô·bîl·î-te\ 'excessive mobility of the temporomandibular joint

temporomandibular joint remodeling: syn, REMODEL
temporomandibular joint syndrome: syn, TEMPOROMANDIBULAR DISORDERS

TENS: acronym for TRANSCUTANEOUS ELECTRICAL NEURAL STIMULATION
tensile stress \tèn·sal, -sîl strèž\: the internal induced force that resists the elongation of a material in a direction parallel to the direction of the stresses
tension \tèn·shûn\ \n (1533): the state of being stretched, strained, or extended
terminal hinge axis: syn, TRANSVERSE HORIZONTAL AXIS
terminal hinge position: syn, CENTRIC RELATION
terminal jaw relation record \tûr·mô-nal jô ri-lâ shun rēk\: syn, CENTRIC RELATION RECORD
thermal expansion \thôr·mal ik-spân·shûn\: expansion of a material caused by heat
thermal tempering: creating a differential in cooling rate between the external and interior of a glass-ceramic resulting in a surface compressive layer and increased flexural strength
thermomolding: heat transfer to a sheet of vinyl acetate-ethylene copolymer (PVAc-PE) material without a chemical change. Softened PVAc-PE, polypropylene, polyethylene terephthalate (glycol) can be adapted to the surface of a refractory cast by using vacuum, air, or mechanical pressure (sponge or putty); syn, VACUUM THERMOMOLDING
thermoplastic \thôr·plâs·tik\ adj (1883): a characteristic or property of a material that allows it to be softened by heating and then return to the hardened state on cooling; thermoplasticity
thread \thêrd\ \n (before 12c): 1. a filament, a group of filaments grouped together, or a filamentous length formed by spinning and twisting short fibers into a continuous strand; 2. a projecting helical rib (as on a pipe) by which parts can be screwed together; a screw thread
thread crest: the top part of the thread; for external threads, the thread crest is the region of the thread, which is on its outer surface, whereas for internal threads, it is the region that forms the inner diameter
thread flank: the thread flanks join the thread roots to the crest of a screw
thread root: the bottom of the thread where it meets the shaft of the screw
thread run out: that portion at the end of a threaded shank that is not cut or rolled to full depth, but which provides a transition between full depth threads and the fastener shank
thread post: any post used for the restoration of endodontically treated teeth that has a screw thread to engage radicular dentin
three-dimensional (3D) printing: syn, RAPID PROTOTYPING, SELECTIVE LASER SINTERING, STEREOLITHOGRAPHY
three-quarter crown: syn, PARTIAL-COVERAGE CROWN, PARTIAL-COVERAGE RETAINER
tic \tîk\ \n (ca. 1822): an intermittent, involuntary, spasmodic movement of a group of muscles, often without a demonstrable external stimulus
TID: acronym for L. Ter In Dié, three times a day
tilted dental implant nonstand: syn, ANGULATED DENTAL IMPLANT
tinfoil \tîn·foil\ ‘15c): 1. paper thin metal sheeting usually of a tin-lead alloy or aluminum (a misnomer); 2. a base-metal foil used as a separating material between the cast and denture base material during flasking and polymerizing

tinfoil substitute: sodium alginate with ammonia, glycerine in a soluble form that will react with the calcium in the gypsum cast to form calcium alginate, the insoluble salt of alginic acid; the insoluble salt acts as a barrier between the polymerizing resin and the moisture and salts of the gypsum; orig, George R. Dickson and IrI C. Schooner, inventors, U.S.A., 1942; comp, SEPARATING MEDIUM

The Journal of Prosthetic Dentistry
used by tinsmiths to join sheets of tin; 2. in dentistry, it is used to secure a thin platinum matrix that is applied to a die of a prepared tooth to support dental porcelain during firing

\textit{tinnitus} \textit{tîn\'tus\'} \textit{n} (1843); a noise in the ears, often described as ringing or roaring

tinted denture base \textit{tînt\'id děn\'chur bâs\'} \textit{syn}, CHARACTERIZED DENTURE BASE

tissue \textit{tîsh\'öö} \textit{n} (1771); 1. the various cellular combinations that make up the body; 2. an aggregation of phenotypically similar cells united in the performance of a particular function; \textit{comp}, HYPERPLASTIC TISSUE

tissue-bearing area: syn, DENTURE FOUNDATION AREA

tissue conditioner: 1. a resilient denture liner resin placed into a removable prosthesis for a short duration to allow time for tissue healing; 2. used in functional removable relining procedures to evaluate denture function and patient acceptance prior to laboratory relining processing

tissue conditioning: a procedure in prosthodontics usually performed by relining a removable complete denture, partial denture, or a maxillofacial prosthesis with a resilient resin and allowing a short duration of time for the patient’s soft tissue to heal

tissue displaceability \textit{tîsh\'öö dîs\'-plâs\'-a-bîl\'-têv\'}; 1. the quality of oral tissues that permits them to be placed in other than a relaxed position; 2. the degree to which tissues permit displacement

tissue displacement \textit{tîsh\'öö dîs\'-plâs\' man\'t\}; the change in the form or position of tissues as a result of pressure; frequently used to describe gingival tissue placement prior to impression making

tissue engineering: a field of research for the growth of tissues or organs used as therapeutic placement in the human body

tissue-integrated prosthesis: any dental implant-supported fixed complete or partial denture supported by osseointegrated dental implants; \textit{orig}, P.I. Branemark, physician/professor/surgeon, Sweden, 1929-2014; \textit{syn}, IMPLANT-SUPPORTED CROWN, IMPLANT-SUPPORTED DENTURE, IMPLANT-SUPPORTED PROSTHESIS

tissue integration \textit{tîsh\'öö 'în tî-grâ\'shun\'} as clinically observed, the apparent direct and healthy attachment of living tissue to an allogenetic material, i.e., a dental implant; \textit{syn}, OSSEOINTEGRATION

tissue molding: \textit{syn}, BORDER MOLDING

tissue reaction \textit{tîsh\'öö rê\'-å-k\'shun\'}; the response of tissues to a condition

tissue registration \textit{tîsh\'öö rêj\’-strâ\'shun\'}; \textit{obs} 1. the accurate registration of the shape of tissues under any condition by means of a suitable material (GPT-1); 2. an impression (GPT-1)

tissue trimming: \textit{syn}, BORDER MOLDING

titanium: \textit{abbr}, Ti; the 22nd element in the periodic table; in dentistry, titanium is used for non-cast prosthodontic restorations and endosseous dental implants; it is a biocompatible surface, promoting cell growth on the titanium oxide surface; cell activity on the surface is dependent on cell type, sterilization protocol, surface cleaning, and surface topography; physical property advantages include high yield strength and noncorrosiveness

\textit{TMD}: \textit{acronym} for TEMPOROMANDIBULAR DISORDERS

tomogram \textit{tôôm\'a-grâm\'} \textit{n} (1940); a radiograph made by using a tomograph

tomograph \textit{tôôm\'a-grôf\'} \textit{nc}; a radiograph produced from a machine that has the source of radiation moving in one direction and the film moving in the opposite direction

tomography \textit{tôô-mõôq\' ra\’fê\'} \textit{n}; a general term for a technique that provides a distinct image of any selected plane through the body, while the images of structures that lie above and below that plane are blurred; also, the term body-section radiography has been applied to the procedure, although the several ways of accomplishing it have been given distinguishing names

tongue \textit{habit} \textit{tûng hâb\'}; conscious or unconscious movements of the tongue that are not related to purposeful functions; such habits may produce malocclusion or injuries to tissues of the tongue or the attachment apparatus of the teeth

tongue thrusting \textit{tûng throst\'-îng\'}; the infantile pattern of suckle-swallow in which the tongue is placed between the incisor teeth or alveolar ridges during the initial stages of deglutition, resulting sometimes in an anterior open occlusion, deformation of the jaws, and/or abnormal function

tooth \textit{ tôôôth\'} \textit{n} (bef. 12c); any hard calcified structure in the alveolar processes of the maxillae or mandible used for the mastication of food; \textit{teeth} \textit{têth\'} \textit{pl}; \textit{comp}, ANATOMIC TOOTH, CUSPLESS TOOTH, METAL INSERT TOOTH, NONANATOMIC TOOTH, REVERSE ARTICULATION TOOTH, TUBE TOOTH, ZERO-DEGREE TOOTH

tooth arrangement \textit{ tôôôth a-râj\’m\’t\'}; 1. the placement of teeth on a denture with definite objectives in mind; 2. the placement of teeth on trial bases; \textit{syn}, ANTERIOR TOOTH ARRANGEMENT, TOOTH PLACEMENT, WAX TRIAL DENTURE, WAX TRY-IN, WAXING

tooth bleaching: \textit{syn}, TOOTH WHITENING

tooth borne: \textit{syn}, TOOTH SUPPORTED

tooth color selection \textit{ tôôôth kû\’i\’l\’ar sî-lêk\’shun\'}; the determination of the color and other attributes of appearance of an artificial tooth or set of teeth for a given individual; \textit{syn}, SHADE SELECTION

tooth form \textit{ tôôôth form\'}; the characteristics of the curves, lines, angles, and contours of various teeth that permit their identification and differentiation; \textit{comp}, ANTERIOR TOOTH FORM, POSTERIOR TOOTH FORM

tooth placement: \textit{syn}, ANTERIOR TOOTH ARRANGEMENT, TOOTH ARRANGEMENT, TRIAL DENTURE, TRIAL PLACEMENT, WAX TRY-IN, WAXING

tooth preparation: 1. the process of removal of diseased and/or healthy enamel and dentin and cementum to shape a tooth to receive a restoration; 2. the resulting prepared tooth

tooth selection \textit{ tôôôth sî-lêk\’shun\'}; the selection of a tooth or teeth of a shape, size, and color to harmonize with the individual characteristics of a patient; \textit{comp}, DENTOGENICS

tooth size discrepancy \textit{ tôôôth sîz dî-skrep\’an-sê\’}; abnormally sized teeth or groups of teeth

tooth-supported \textit{ tôôôth sa-pôr\’tîd\'}; a term used to describe a dental prosthesis or part of a prosthesis that depends entirely on the natural teeth for support

tooth-supported base \textit{ tôôôth-sa-pôr\’ tîd bâs\’}; a removable dental prosthesis base that restores an edentulous region that has abutment teeth at each end for support. The tissue that it covers is not used for primary support

tooth-supported denture: \textit{syn}, OVERDENTURE

tooth whitening: the application of an agent (a form of carbamide peroxide) or abrasive to the surface of the tooth for beautifying (stain removal), enhancing esthetics, or altering the appearance; \textit{comp}, TOOTH BLEACHING

torque \textit{ tôôrk\'} \textit{n} (ca. 1884); a twisting or rotary force; the movement of a system of forces producing rotation

torus \textit{ tôôr\’us\'} \textit{n} (1563); 1. a smooth rounded anatomical protuberance; 2. in dentistry, a bony prominence sometimes seen on the lingual surface of the mandible and the midline of the hard palate; \textit{tori} \textit{ tôôr\’i, tôôr\’ pl}
total elasticity of muscle • trial base

**total elasticity of muscle** \(\text{total elasticity of muscle收受于physical and physiologic elasticity of muscle (GPT-4)}\)

**total occlusal convergence**: the total angle of convergence, measured in degrees as viewed in a given plane, formed by opposing axial walls when a tooth or machined surfaces of a metal or ceramic material is prepared for a fixed dental prosthesis; **comp.** CONVERGENCE ANGLE, TAPER

toughness \(\text{toughness收受于the ability of a material to withstand stresses and strains without breaking; resistance to fracture}\)

toxic dose \(\text{toxic dose收受于the amount of a drug that causes untoward symptoms in most persons}\)

toxicity \(\text{toxicity收受于the adverse reactions (dose-response-time relationships) of tissues to selected foreign substances resulting in unacceptable in vivo interactions; the toxicity can be at the local or systemic level depending on the amount, rate of release, and specific type of substance available to the tissues}\)

**tracing** \(\text{tracing收受于}TRACING DEVICE\)

**tracing device** \(\text{tracing device收受于}TRACING DEVICE\)

**transcranial oblique radiograph** \(\text{transcranial oblique radiograph收受于}TRACING DEVICE\)

**transcutaneous electrical neural stimulation** \(\text{transcutaneous electrical neural stimulation收受于}TRACING DEVICE\)

**transepithelial** \(\text{transepithelial收受于}TRACING DEVICE\)

**transepithelial abutment** \(\text{transepithelial abutment收受于}TRACING DEVICE\)

**transfer coping** \(\text{transfer coping收受于}TRACING DEVICE\)

**transit dose** \(\text{transit dose收受于}TRACING DEVICE\)

**transitional denture** \(\text{transitional denture收受于}TRACING DEVICE\)

**transitional prosthesis** \(\text{transitional prosthesis收受于}TRACING DEVICE\)

**translating condyle**: syn, NONWORKING-SIDE CONDYLE

**translation** \(\text{translation收受于}TRACING DEVICE\)

**translatory movement** \(\text{translatory movement收受于}TRACING DEVICE\)

**translucency** \(\text{translucency收受于}TRACING DEVICE\)

**transmucosal** \(\text{transmucosal收受于}TRACING DEVICE\)

**transosteal dental implant** \(\text{transosteal dental implant收受于}TRACING DEVICE\)

**transverse axis**: syn, TRANSVERSE HORIZONTAL AXIS

**transverse facial fracture**: syn, LE FORTE III FRACTURE, MIDFACIAL FRACTURE

**transverse horizontal axis** \(\text{transverse horizontal axis收受于}TRACING DEVICE\)

**transverse occlusion** \(\text{transverse occlusion收受于}TRACING DEVICE\)

**trauma** \(\text{trauma收受于}TRACING DEVICE\)

**traumatogenic** \(\text{traumatogenic收受于}TRACING DEVICE\)

**trauma from occlusion**: syn, OCCLUSAL TRAUMA

**traumatic occlusion**: syn, OCCLUSAL TRAUMA

**traumatogenetic** \(\text{traumatogenetic收受于}TRACING DEVICE\)

**treatment** \(\text{treatment收受于}TRACING DEVICE\)

**treatment plan** \(\text{treatment plan收受于}TRACING DEVICE\)

**treatment position**: a treatment position of maximal intercuspal position (MIP) if it differs from the preoperative position

**trephine** \(\text{trephine收受于}TRACING DEVICE\)

**trial base** \(\text{trial base收受于}TRACING DEVICE\)

**TRACING, STYLUS TRACING**

**MANDIBULAR TRACER, NEEDLE POINT TRACING, PANTOGRAPHIC DEVICE**

**EXTRAORAL TRACER, GOTHIC ARCH TRACER, INTRAORAL TRACING**
making maxillomandibular relationship records and for the waxing of the trial denture; comp, DEFINITIVE DENTURE BASE

**trial denture** ˈtrɪəl dɛnˈʃrən ə preliminary arrangement of artificial teeth that has been prepared for placement into the patient’s mouth to evaluate esthetics, phonetics, and maxillomandibular relationships; comp, DEFINITIVE DENTURE BASE

**trial flask closure** ˈtrɪəl flāsk kloˈzhrən ə preliminary closure made for the purpose of eliminating excess material and ensuring that the mold is completely filled

**trial placement** ˈtrɪəl plāsˈmænt ə the process of placing a trial denture in the patient's mouth for evaluation; syn, TRIAL DENTURE, WAX TRY-IN

**tribochemical silica airborne-particle abrasion:** a method to activate a metal surface with airborne-particle abrasion to form a resin bonding surface; syn, cold silicatization

**tribology:** the science of surface interactions that result in abrasion and wear

**tricalcium phosphate** ˈtrɪkəˈlɛkˈse-əm fōsˈfāt ə an inorganic particulate or solid form of relatively biodegradable ceramic material that is used as a scaffold for bone regeneration; it may be used as a matrix for new bone growth

**trichromatic system** ˈtrɪkəˈrəʊ-mətˈɪk sɪsˈtam ə a system for specifying color stimuli in terms of the tristimulus value based on matching colors by additive mixtures of three primary colored lights

**trichromatism** ˈtrɪkəˈrəʊ-mə-tizəm ə any type of vision in which the colors seen require, in general, three independently adjustable primaries (such as red, green, and blue) for their duplication by mixture; trichromatism may be either anomalous trichromatism or normal vision

**trigger area** ə syn, TRIGGER POINT

**trigger point** ˈtrɪgr ər pɔɪnt ə a focus of hyperirritability in tissue that when palpated, is locally tender and gives rise to heterotopic pain

**trigger spot** ə syn, TRIGGER POINT

**trigger zone** ə syn, TRIGGER POINT

**trigone** ə syn, GINGIVAL TRIGONE, GINGIVAL ZENITH

**tripod markings** ˈtrɪpɹ ədʒ ˈmɑrkɪŋz ə those marks or lines drawn on a cast in a single plane perpendicular to the survey rod to assist with repositioning the cast on a dental surveyor in a previously defined orientation; comp, SURVEY, SURVEYED DIAGNOSTIC CAST FOR REMOVABLE PARTIAL DENTURE, SURVEYED DEFINITIVE CAST FOR REMOVABLE PARTIAL DENTURE, tripodal markings

**tripodization** ˈtrɪpɹ ədʒ ˈzæ ʃən ə an occlusal scheme characterized by a cusp to fossa relationship in which there are three points of contact about the cusp and opposing fossa with no contact on the cusp tip

**trismus** ə (ca. 1693): syn, MANDIBULAR TRISMUS

**trismus appliance** ˈtrɪzməs ə pliˈənəs ə slang: comp, DYNAMIC BITE OPENER, OCCLUSAL DEVICE

**tristimulus value** ˈtrɪstɪˈmʌs faˈluːs vələˈjʊə; ə (R, G, B: X, Y, Z, etc.) amounts of the three reference color stimuli, in a given trichromatic system, required to match the color of the stimulus considered

**titanopla** ˈtrɪtənəˈpələ ə form of dichromatism in which reddish blue and greenish yellow stimuli are confused; a common result of retinal disease but may be inherited; syn, blue blindness, titranope

**try-in** ə syn, TRIAL PLACEMENT

**tube impression** ˈtʊəb, tʊˈəb ɪmˈprəʃən ə 1. a cylinder used as a tray to confine and direct impression material to make an impression of a single tooth; 2. the impression resulting from this procedure; syn, copper-band impression

**tube teeth** ˈtʊəb ˈtɛθ ə artificial teeth with an internal, vertical, cylindrical aperture extending from the center of the base upward into the body of the tooth, into which a pin may be placed or cast for the attachment of the tooth to a fixed or removable denture base

**tubercule** ˈtʊəb ˌbɜrˈkjuːəl n (1578): a small bony prominence or excrescence; a nodule

**tuberosity** ə (ca. 1611): -ties pl; syn, MAXILLARY TUBEROSITY

**tunnel dissection** ˈtənəl ˈdɪskənʃən ə a dissection of the periosteum from bone through a small incision, in a tunnel-like fashion

**turgid** ˈtɜrgid ə adj (1620): being on a state of distention; swollen

**typodont** ˈtɪpəˈdɒnt ə a replica of the natural dentition and alveolar mucosa, set to average condylar motions, used in training students in dental care; syn, typodont, deniform

**U**

**UCLA abutment nonstand** ə a colloquial term used to describe a dental abutment that is attached directly to the implant body by means of a screw; syn, CUSTOM DENTAL IMPLANT ABUTMENT, DENTAL IMPLANT ABUTMENT

**UCLA crown** ə a dental crown that is attached directly to the implant body by means of a screw without an intervening abutment

**ultimate strength** ə the greatest stress that may be induced in a material at the point of rupture; syn, ultimate tensile strength

**ultraviolet** ˌuːltrəˈvɪrət ə the radiant energy of wavelengths shorter than extreme violet and lying beyond the ordinarily visible spectrum; usually assigned to wavelengths shorter than 380 nm

1. **undercut** ˈʌndərkət n (1859): 1. the portion of the surface of an object that is below the height of contour in relationship to the path of placement; 2. the contour of a cross-sectional portion of a residual ridge or dental arch that prevents the insertion of a dental prosthesis; 3. any irregularity in the wall of a prepared tooth that prevents the withdrawal or seating of a wax pattern or indirect restoration

2. **undercut** ˈʌndərkət və (ca. 1598): to create areas that provide mechanical retention for dental materials placement

**uniform color space** ˈjuːnɪfɔrmˈkələr spəs ə color space in which equal distances are intended to represent threshold or above threshold perceived color differences of equal size

**unilateral** ˈʌnɪˈdələr ə adj (1802): relating to one side; one-sided

**unilateral partial denture** ə a removable partial denture that restores lost or missing teeth on only one side of an arch and without a cross-arch major connector; *Editorial note for usage:* this term is incorrectly used for a Kennedy class II or III removable partial denture that has a cross-arch major connector; syn, NESPIT PROSTHESIS

**unilateral subperiosteal implant** ˈʌnəlɪˈtəl ˈsʌbˌpərɪˈeəs tɛəl ɪmˈplænt ə an eposteal dental implant that provides abutments for support of a removable or fixed partial denture in a partially edentulous arch

**upper impression** ə slang: syn, MAXILLARY IMPRESSION

**upright** ˈʌprɪt ə adj: the movement of a tooth into an erect or normal position

**uranaschisis** ə (1927): congenital hard palate cleft; comp, PALATAL CLEFT
uranostaphyloschisis • virtual surgical planning

uranostaphyloschisis /yur a nó stā f lōsk īs/ n: cleft of the hard and soft palate; comp, PALATAL CLEFT

V

vacuum casting /vāk yō-um kāsˈting/ the casting of a material (i.e., metal, plastic) in the presence of a partial vacuum

vacuum investing /vāk yō-um in-vēstˈing/ the process of investing a pattern within a partial vacuum

vacuum mixing /vāk yō-um miksˈing/ a method of mixing a material, such as dental stone or casting investment, below atmospheric pressure

vacuum thermomold: a polymeric material formed by vacuum thermomolding; a polymer matrix; syn, MATRIX, vacuum mold

vacuum thermomolding: primary term for making a vacuum thermomold; heat transfer to a sheet of vinyl acetate-ethylene copolymer (PVAc-PE) material; softened PVAc-PE can be adapted to the surface of a refractory cast by using vacuum, air, or mechanical pressure (spoon or putty)

value /vālˈyō/ n (14c): the quality by which a light color is distinguished from a dark color, the dimension of a color that denotes relative blackness or whiteness (grayness, brightness); value is the only dimension of color that may exist alone; comp, MUNSELL VALUE

Munsell AH. A color notation. Baltimore, MD: Munsell Color Co.; 1975:14-17

van der Waals bond (ca. 1926): eponym for a bond that involves weak interatomic attractions such as variation in physical mass or location of electrical charge; e.g., molecular polarization, electrical dipoles, and dispersion effects—hydrogen bridges; orig, Johannes D. van der Waals, physicist, Netherlands; syn, SECONDARY BONDS

vascular pain /vāsˈkri-ə-lər pain/ a type of deep somatic pain of visceral origin that emanates from the affere nervous that innervate blood vessels

velopharyngeal closure: syn, PALATOPHARYNGEAL CLOSURE

velopharyngeal deficiencies: comp, PALATAL INCOMPETENCE, PALATAL INSUFFICIENCY

velum /vēlˈum/ n (1771): a covering; a general term for a veil-like structure; comp, SOFT PALATE

veneer /vē-nēr/ n (1702): 1. a thin sheet of material usually used as a finish; 2. a protective or ornamental facing; 3. a superficial or attractive display in multiple layers, frequently termed a laminate veneer

1vent n: 1. a small auxiliary sprue to aid and improve casting procedures; 2. a small perforation placed in a cast restoration to facilitate complete cementation by minimizing hydraulic pressure

2vent vbs: 1. to place an auxiliary sprue; 2. to place a perforation; venting p.pr

verification cast substend : syn, IMPLANT INDEX CAST

vertical axis: syn, VERTICAL AXIS OF THE MANDIBLE

vertical axis of the mandible /vōrˈtī-kul əkˈsēz əv tha mānˈdē-balə/ an imaginary line around which the mandible may rotate through the horizontal plane

vertical dimension /vōrˈtī-kal dī-mēnˈshən/ the distance between two selected anatomic or marked points (usually one on the tip of the nose and the other on the chin), one on a fixed and one on a movable member; comp, OCCLUSAL VERTICAL DIMENSION, REST VERTICAL DIMENSION, VERTICAL DIMENSION OF REST, VERTICAL DIMENSION OF OCCLUSION, VERTICAL DIMENSION OF SPEECH

vertical dimension decrease /vōrˈtī-kal dī-mēnˈshən dī-kresˈ; decreasing the vertical distance between the mandible and the maxillae by modifications of teeth, the positions of teeth or occlusion rims, or through alveolar or residual ridge resorption (GPT-1); comp, OCCLUSAL VERTICAL DIMENSION

vertical dimension increase /vōrˈtī-kal dī-mēnˈshən/ increasing the vertical distance between the mandible and the maxillae by modifications of teeth, the positions of teeth, or occlusion rims (GPT-1); comp, OCCLUSAL VERTICAL DIMENSION

vertical dimension of occlusion: the distance between two selected anatomic or marked points (usually one on the tip of the nose and the other on the chin) when in maximal intercuspal position; syn, OCCLUSAL VERTICAL DIMENSION

vertical dimension of rest: syn, PHYSIOLOGIC REST POSITION, REST VERTICAL DIMENSION

vertical dimension of speech /vōrˈtī-kal dī-mēnˈshən u̇ v spēch/ that distance measured between two selected points when the occluding members are in their closest proximity during speech

vertical opening: syn, VERTICAL DIMENSION

vertical overlap /vōrˈtī-kal ə vərˈlāp/ 1. the distance teeth lap over their antagonists as measured vertically; especially the distance the incisal edges extend below those of the mandibular teeth; it may also be used to describe the vertical relations of opposing cusps; 2. the vertical relationship of the incisal edges of the maxillary incisors to the mandibular incisors when the teeth are in maximal intercuspal position

verticentric /vōrˈtē-sēn trīk/ n: a record used in removable complete denture fabrication; it involves the simultaneous recording of the vertical dimension of occlusion with the jaws in centric relation; orig, Earl Pound, prosthodontist, U.S.A., 1901-1986

vestibule /vēsˈta-bī-lə/ n (ca. 1728): 1. any of various bony cavities, especially when serving as or resembling an entrance to another; 2. the portion of the oral cavity that is bounded on the medial side by the teeth, gingiva, and alveolar ridge or the residual ridge, and on the lateral side by the lips and cheeks; syn, BUCCAL VESTIBULE, LABIAL VESTIBULE

vestibuloplasty /vē-stibˈū-lo-plās-tē/ n: a surgical procedure designed to increase the effective residual ridge height by lowering muscles attaching to the buccal, labial, and lingual aspects of the jaws

vibrating line /vī brāˈting lin/ an imaginary line across the posterior part of the soft palate marking the division between the movable and immovable tissues; this line can be identified when the movable tissues are functioning

Vickers hardness number: acronym is VHN; a measure of hardness obtained with a diamond pyramidal indenter with a square base and an angle of 136 degrees; VHN is proportional to the ratio of the load divided by the indentation area; orig, by engineers at Vickers, Ltd. in the United Kingdom, 1920s

videofluoroscopy /vdēˈflōō ˈflōōˌrōs ˈkēˌpēˌ flōˌrōz/ n: dynamic x-rays recorded on videotape

viewing conditions /vēˈōō ing kun-dishˈunz/ various conditions under which visual observation is made including the size of the stimulus, characteristics of the surrounding area, nature of the illuminant, angle of viewing, area of the retina, etc.

virtual reality modeling language (1995): acronym is VRML; the first web-based 3D format

virtual surgical planning: pre-surgical manipulation of 3D images of an anatomic site for the purpose of measuring outcomes and to design devices, grafts, and techniques; comp, SPACE ANALYSIS
visceral pain \vıs\-\ur\-al pain\: deep somatic pain originating in visceral structures, such as mucosal linings, walls of hollow viscera, parenchyma of organs, glands, dental pulps, and vascular structures

visible-light polymerization: syn, LIGHT-ACTIVATED POLYMERIZATION, PHOTONINITIATOR, POLYMERIZATION

visible spectrum \vız\-\ă\-al spēk\-trum\: the section of the electromagnetic spectrum that is visible to the human eye; it ranges from 380 nm to 760 nm

visual adaptation \vız\-\ō\-al ā\-pā\-tā\-shun\: adjustive change in visual sensitivity as a result of continued visual stimulation or lack of stimulation; three recognized types are (1) scotopic or dark adaptation, (2) photopic or light adaptation, and (3) chromatic or color adaptation

visual photometry \vız\-\ō\-al fo\-tō\-mē\-trē\: the measurement of luminous radiation based on its effect on the visual receptors

vitrification n\: in ceramics, the progressive fusing of porcelain at high temperatures into an amorphous, more glassy material; comp; SINTER

voxel: contr of Volume and piXEL; a volumetric digital image in a 3D grid

VRML: acronym for VIRTUAL REALITY MODELING LANGUAGE

vulcanite \vūl\-ka\-nīt\: n\: an obsolete denture base material that is a combination of caoutchouc and sulfur; these harden in the presence of suitable heat and application of pressure

vulcanize \vūl\-ka\-nīz\: vb\ (1846); to produce flexible or hard rubber, as desired, by subjecting caoutchouc, in the presence of sulfur, to heat and high steam pressure in a processing unit, termed a vulcanizer, made for that purpose; -nized, -nizing vt

W

warp \wərp\: vt (13c); torsional change of shape or outline; to turn or twist out of shape

wash impression slang: syn, FINAL IMPRESSION

wave length \wāv\ lēŋ\kth\: the distance at any instant between two adjacent crests (or identical phases) of two series of waves that are advancing through a uniform medium; the wavelength varies inversely with the vibration rate or number of waves passing any given point per unit period of time

wax \wäks\ s\: n\ (bef. 12c); one of several esters of fatty acids with higher alcohols, usually monohydric alcohols; dental waxes are combinations of various types of waxes compounded to provide desired physical properties; comp, BASEPLATE WAX, BOXING WAX, CASTING WAX, DENTAL IMPRESSION WAX, MODELING WAX

wax addition technique: the process used to develop a wax pattern through organized sequential addition of wax to shape the individual components of the desired anatomic form

wax elimination \wäks lē\-lim\-ā\-nā\-shun\: the removal of wax from a mold, usually by heat

wax expansion \wäks īk\-spān\-shun\: a method of expanding a wax pattern to compensate for the shrinkage of gold during the casting process

wax model denture: syn, TRIAL DENTURE

wax pattern \wäks pāt\ ur\m\: a wax form that is the positive likeness of an object to be fabricated

wax trial denture: syn, TRIAL DENTURE; comp, DIAGNOSTIC DENTURE WAX-UP

wax try-in: the placement of a wax trial denture or diagnostic waxing in the mouth for the purpose of evaluating aesthetics and phonetics; syn, TOOTH ARRANGEMENT, TRIAL DENTURE, TRIAL PLACEMENT

wax-up \wäx\-up\: n\: syn, DIAGNOSTIC WAXING

waxing \wäks\-\ĭ\ng\: vb\ the contouring of a wax pattern or the wax base of a trial denture into the desired form (GPT-1); comp, DIAGNOSTIC DENTURE WAX-UP; DIAGNOSTIC WAXING, TOOTH ARRANGEMENT, TRIAL DENTURE

wear facet \wār fā\-sē\-tē\: any wear line or plane on a tooth surface caused by attrition; syn, OCCLUSAL FACET

Weber-Fergusson incision: eponym for a facial incision used in exposing the maxillary bone in a maxillectomy procedure; orig, Sir E. S. Fergusson, surgeon, Scotland, United Kingdom, dates vary: 1808-1877 or 1871-1944

Weibull modulus: eponym for a parameter in the distribution formula relating the tensile strength of brittle materials; orig, Waloddi Weibull, engineer/mathematician, Sweden, 1939

1 weld \wēld\ n (1831); a welded joint; the state or condition of being welded

2 weld \wēld\ vb\ to unite or fuse two pieces by hammering, compression, or by rendering soft by heat with the addition of a fusible material

wettability: syn, CONTACT ANGLE

white esthetic score: a visual analog scale applied to esthetics of dental implant-supported crowns; parameters include tooth form, outline/volume, color (hue/value), surface texture, translucency/characterization; score values range is 0 (disapprove), 1, or 2 (approve); orig, Urs Belzer prosthodontist, Switzerland, 2009

white light scanner: a 3D digital scanner of objects that uses coherence interferometry; peak wavelength fringes interpret surface height on the interferogram; comp, SCANNER

whitening: syn, TOOTH WHITENING

whitening gel carrier: a device that covers the teeth in either dental arch and is used to apply tooth whitening agent in close proximity to tooth enamel

whitening tray: syn, WHITENING GEL CARRIER

whit\ing \wēt\-\ĭ\ng\: white; pure white chalk (calcium carbonate) that has been ground and washed; used for polishing dental materials

wire splint \wir\ splīnt\: a device used to stabilize teeth in the maxillae or mandible loosened by an accident or by a compromised periodontium; a device to reduce and stabilize maxillary or mandibular fractures by application to both arches and connection with intermaxillary wires or elastic bands

Wolff’s Law: eponym for the principle that a bone, either normal or abnormal, will develop the structure most suited to resist those forces acting on it; orig, Julius Wolff, anatomist, Germany, 1836-1902

work \wŏrk\ n\ (bef. 12c); the product of a force acting on a body and the distance through which the point of application of the force moves

work authorization: a signed written order provided by the dentist to the dental laboratory detailing the work to be performed; a component of the patient’s dental record specifying the design and materials to be used; syn, LABORATORY WORK AUTHORIZATION

working articulation \wôr\-kī\ng\ ā\-tīk\-yā\-lä\ shun\: the occlusal contacts of teeth on the side toward which the mandible is moved

working bite slang: syn, WORKING ARTICULATION

working bite relation slang: syn, WORKING ARTICULATION
working cast • zygomatic implant

working cast nonstand: syn, DEFINITIVE CAST, FINAL CAST, MASTER CAST
working condyle: syn, WORKING-SIDE CONDYLE
working contacts \wû́r kíng kông tákts\  obs: contacts of teeth made on the side of the occlusion toward which the mandible has been moved (GPT-1); syn, WORKING-SIDE CONTACTS
working model nonstand: syn, CAST
working occlusal surface \wû́r kíng a-kliô’zal súr fâs\  obs: the surface or surfaces of teeth on which mastication can occur (GPT-1)
working occlusion \wû́r kíng a-kliô zhùn\  obs: the occlusal contacts of teeth on the side to which the mandible is moved (GPT-1)
working-side \wû́r kíng sid\: the side toward which the mandible moves in a lateral excursion; syn, LATEROTRUSION
working-side condyle \wû́r kíng sid kông dí\: the condyle on the laterotrusive side
working-side condylar path \wû́r kíng sid kông dí pâ\: the path the condyle travels on the working-side when the mandible moves in laterotrusion
working-side contacts \wû́r kíng sid kông tákts\: contact of teeth on the side of the articulation toward which the mandible is moved during working movements
wrought \vốt\ adj (13c): worked into shape; formed, hammered
wrought wire clasp: a suprabulge or infrabulge retainer for a removable partial denture or maxillofacial prosthesis that has a suprabulge or infrabulge retainer for a working-side contacts

X

\x¬\-ray \vëks’rā\ vt (1896): the process of exposing objects to roentgen rays and projecting their shadow on sensitized surfaces
\x¬\-ray \vëks’rā\ n (1900): syn, ROENTGEN RAY
x-ray picture: syn, ROENTGENOGRAM
xenogenic graft \zhên’a-jên’tk\: a graft from one species to another species; syn, heterologous graft
xerostomia \zîr’a-stô’mé-á\: n: dryness of the mouth from lack of normal secretions

Y

yield strength \yéld strêngkth\: the strength at which a small amount of permanent (plastic) strain occurs, usually 0.1% or 0.2%, and most frequently measured in MPa or psi
yttria-stabilized zirconia: acronym is Y-TZP; a dopant-stabilized zirconia ceramic; syn, ZIRCONIA
Young’s modulus: eponym for the constant of proportionality expressed in the stress–strain plot as the slope in the elastic region where elastic recovery occurs upon release of the stress inducing the strain; usually given the symbol E. A higher modulus (GPa, psi) denotes a greater stiffness or material rigidity; orig, Thomas Young, physician/physicist, United Kingdom, 1773-1829; syn, MODULUS OF ELASTICITY
Y-TZP ceramics: acronym for yttria-stabilized tetragonal zirconia polycrystalline ceramics

Z

zenith: syn, GINGIVAL ZENITH, GINGIVAL TRIGONE
zero-degree teeth \zîr’ô-di-gré’, zé’rō’-\: teeth; posterior denture teeth having 0-degree cuspal angles in relation to the plane established by the horizontal occlusal surface of the tooth; syn, zero-degree nonanatomic teeth, NONANATOMIC TEETH
zinc oxide Eugenol cement: a cement or luting agent resulting from mixing zinc oxide with eugenol (oil of cloves), typically dispensed in the form of a powder and liquid or sometimes two pastes. ANSI/ADA Type I or Type II zinc oxide and eugenol cements are respectively designated for provisional or permanent cementation of restorations fabricated outside of the mouth; syn, EBA CEMENT
zinc phosphate cement: a cement or luting agent resulting from mixing zinc oxide (powder component) with phosphoric acid, water, aluminum phosphate, and zinc phosphate (liquid component); magnesium oxide is often used as the principal modifier
zinc polycarboxylate cement: a cement or luting agent resulting from mixing zinc oxide, magnesium oxide, and sometimes stannous oxide (powder component) with an aqueous solution of polyacrylic acid and copolymers
zirconia: abbr, ZrO₂; an oxide of zirconium; a phase of monoclinic (room temperature), tetragonal (above 1170° C), and cubic (above 2370° C); this transformation between phases is often stabilized with addition of a small amount of yttria; cold-pressed (CP) zirconia requires sintering after milling and is not as dimensionally stable as hot isostatically pressed (HIP) zirconia, which doesn’t need sintering and is more dimensionally stable; comp, DOPANT, PHASE TRANSFORMATION TOUGHENING
zirconia ceramic post: a ceramic post used in the restoration of endodontically treated teeth, especially when a metal post may compromise esthetics; typically used with composite resin or pressed-on-ceramics to form the core
zirconia restoration: a prosthesis fabricated from a zirconia framework; the types of restorations include monolithic zirconia or porcelain-veneered zirconia (a zirconia framework enhanced with veneering porcelain or pressed-on-ceramics); comp, PORCELAIN-FUSED-TO-ZIRCONIA, PRESS-ON-ZIRCONIA CERAMICS
zirconium: abbr, Zr; a metal element with atomic number 40
zygoma \zî-g’ô’m\: n (ca. 1684); the area formed by the union of the zygomatic bone with the zygomatic processes of the temporal and maxillary bones
zygomatic implant: a long (4.4 x 30 to 45 mm), angled, endosseous implant placed into the zygoma as an augmentation procedure for the severely atrophic maxillae

APPENDIX B

Prosthodontic Diagnostic Index (PDI) for Complete Edentulism

The official classification system for edentulism developed by the American College of Prosthodontists. The system classifies edentulous patient treatment complexity using four diagnostic criteria: (a) mandibular bone height, (b) maxillo-mandibular relationship, (c) maxillary residual ridge morphology, and (d) muscle attachments. These four criteria identify patients as Class 1 (ideal or minimally compromised), Class 2 (moderately compromised), Class 3 (substantially compromised), or Class 4 (severely compromised).

The PDI for the Edentulous Class 1 Patient

A patient who presents with ideal or minimally compromised complete edentulism that can be treated successively by conventional prosthodontic techniques. The Class 1 patient exhibits (a) a residual mandibular bone height of at least 21 millimeters measured at the area of least vertical bone height, (b) a maxillo-mandibular relationship permitting normal tooth articulation and an ideal ridge relationship, (c) a maxillary ridge morphology that resists horizontal and vertical movement of the denture base, and (d) muscle attachment locations conducive to denture base stability and retention.

The PDI for the Edentulous Class 2 Patient

A patient who presents with moderately compromised complete edentulism and continued physical degradation of the denture supporting anatomy. The Class 2 patient exhibits (a) a residual mandibular bone height of 16-20 millimeters measured at the area of least vertical bone height, (b) a maxillo-mandibular relationship permitting normal tooth articulation and an appropriate ridge relationship, (c) a maxillary residual ridge morphology that resists horizontal and vertical movement of the denture base, and (d) muscle attachments that exert limited compromise on denture base stability and retention.

The PDI for the Edentulous Class 3 Patient

A patient who presents with substantially compromised complete edentulism and exhibits (a) limited interarch space of 18-20 millimeters and/or temporomandibular disorders, (b) a residual mandibular bone height of 11-15 millimeters measures at the area of least vertical bone height, (c) an Angle Class I, II, or III maxillo-mandibular relationship, (d) muscle attachments that exert a moderate compromise on denture base stability and retention, and (e) a maxillary residual ridge morphology providing no resistance to movement of the denture base, and (d) muscle attachments that exert a significant compromise on denture base stability and retention.

The PDI for the Edentulous Class 4 Patient

A patient who presents with the most debilitated form of complete edentulism, where surgical reconstruction is usually indicated and specialized prosthodontic techniques are required to achieve an acceptable outcome. The Class 4 patient exhibits (a) a residual mandibular bone height of 10 millimeters or less, (b) an Angle Class I, II, or III maxillo-mandibular relationship, (c) a maxillary residual ridge morphology providing no resistance to movement of the denture base, and (d) muscle attachments that exert a significant compromise on denture base stability and retention.

APPENDIX C

Prosthodontic Diagnostic Index (PDI) for the Partially Edentulous Patient

The official classification system for the partially edentulous patient developed by the American College of Prosthodontists. The system classifies the partially edentulous treatment complexity based on four diagnostic criteria: (a) the location and extent of the edentulous areas, (b) the condition of the abutment teeth, (c) the occlusal scheme, and (d) the residual ridge. These four criteria identify patients as Class 1 (ideal or minimally compromised), Class 2 (moderately compromised), Class 3 (substantially compromised), or Class 4 (severely compromised).

PDI for the Partially Edentulous (PE) Class 1 Patient

A patient who presents with (a) partial edentulism confined to a single arch, (b) minimal compromise to the abutment teeth, (c) an ideal or minimally compromised occlusion, (d) an Angle Class I molar and jaw relationships, and (e) an Angle Class I residual ridge (refer to the PDI for the Class I Completely Edentulous Patient, Appendix B). The PE Class 1 patient includes those with any anterior maxillary span not exceeding two incisors, any anterior mandibular span not exceeding four missing incisors, and any posterior span not exceeding two premolars or one premolar plus a molar.

PDI for the Partially Edentulous Class 2 Patient

A patient who presents with (a) partial edentulism that is moderately compromised, confined to a single arch, (b) moderate compromise to the abutment teeth in at least one sextant, (c) a moderately compromised occlusal scheme that requires adjunctive therapy, (d) an Angle Class I molar and jaw relationships, and (e) an Angle Class II residual ridge (refer to PDI for the Class II Completely Edentulous Patient, Appendix B). The PE Class 2 patient includes those with any anterior maxillary span not exceeding two premolars or one premolar plus a molar or any missing canine.

PDI for the Partially Edentulous Class 3 Patient

A patient who presents with (a) partial edentulism that is substantially compromised, in multiple areas in one or both arches, (b) substantial compromise to the abutment teeth in three sextants, (c) a substantially compromised occlusal scheme requiring reestablishment of the entire occlusal scheme without a change in the vertical dimension, (d) an Angle Class II molar and jaw relationship, and/or (e) an Angle Class III residual ridge description (refer to PDI for the Class III Completely Edentulous Patient, Appendix B).

PDI for the Partially Edentulous Class 4 Patient

A patient who presents with (a) partial edentulism that is severely compromised in multiple areas and opposing arches, (b) severe compromise to the abutment teeth in four or more sextants, (c) a severely compromised occlusal scheme requiring reestablishment of the entire occlusal scheme and a change in the vertical dimension, (d) an Angle Class II and/or Angle Class III molar and jaw relationships, and (e) at least one edentulous ridge having a guarded prognosis. The PE Class 4 patient also includes congenital or maxilofacial defects, those with at least one severely compromised edentulous arch, severe manifestations of local or systemic disease, severe ataxia or dyskinesia and the refractory patient.
APPENDIX D

Prosthodontic Diagnostic Index (PDI) for the Completely Dentate Patient

The official classification system for the completely dentate patient developed by the American College of Prosthodontists. This standardized identification grouping of dentate patient treatment complexities is based on two criteria: (a) the condition of the teeth and (b) the occlusal scheme. These criteria identify patients as Class 1 (ideal or minimally compromised), Class 2 (moderately compromised), Class 3 (substantially compromised), or Class 4 (severely compromised).

Prosthodontic Diagnostic Index for the Completely Dentate Class 1 Patient

A patient who presents with (a) a dentition that is minimally compromised and (b) with contiguous, intact dental arches requiring prosthodontic treatment on three teeth or less that do not require adjunctive therapy (periodontal treatment, endodontic treatment, orthodontic treatment, etc.).

Prosthodontic Diagnostic Index for the Completely Dentate Class 2 Patient

A patient who presents with (a) a dentition that is moderately compromised with no edentulous areas, (b) an intact anterior guidance, (c) pathology affecting the coronal morphology of 4 or more teeth in only one sextant, and (d) teeth that require adjunctive treatment (periodontal treatment, endodontic treatment, orthodontic treatment, etc.) on four or more teeth in one sextant.

Prosthodontic Diagnostic Index for the Completely Dentate Class 3 Patient

A patient who presents with (a) a dentition that is substantially compromised with no edentulous areas, (b) an impaired anterior guidance, (c) substantial posterior occlusal wear and a normal vertical dimension, (d) pathology affecting the coronal morphology of 4 or more teeth in three or more sextants, and (e) teeth that are substantially compromised requiring adjunctive therapy (periodontal treatment, endodontic treatment, orthodontic treatment, etc.) in two sextants.

Prosthodontic Diagnostic Index for the Completely Dentate Class 4 Patient

A patient who presents with (a) a dentition that is severely compromised with no edentulous areas, (b) an impaired anterior guidance, (c) severe posterior occlusal wear with loss of vertical dimension, (c) the need for the reestablishment of the entire occlusion with a change in vertical dimension, and (d) teeth that require adjunctive therapy (periodontal treatment, endodontic treatment, orthodontic treatment, etc.) in three or more sextants.
